EBRD presses on with help to former Soviet bloc

The European Bank for Reconstruction and Development pressed on with efforts to help the economies of eastern Europe and the former Soviet Union as accusations of extravagance continued to dog its president, Jacques Attali (below).

The bank's annual meeting starts formally in London with its board of governors due to discuss the costs of its establishment in the City as well as progress towards assisting former communist countries. Page 16. Turn gunmen into tax men, Page 2; IMF may seek to expand

London City bomb brings calls for terrorist action

By Andrew Jack, Richard Waters and Philip Stephens in London

THE UK GOVERNMENT faces calls to sharpen its anti-terrorist campaign after the massive Irish Republican Army bomb in the City of London which left one man dead and caused damage provisionally estimated at more than £30m (\$462m).

As thousands of City workers faced the prospect of being moved into temporary office space, the prime minister will come under pressure from members of Parliament for a much wider review of the government's efforts to halt the IRA's mainland bombing campaign.

However, senior ministers were cautioning last night against any "knee-jerk" response that would add to the propaganda value for the IRA of the latest attack.

The prime minister's office was seeking to avoid a formal statement to MPs on the bombing because of its longstanding view that government should not add to the publicity on which the IRA thrives.

Mr Michael Cassidy, chairman of the Corporation of the City of London's policy committee, estimated that at least 20,000 people might need to be temporarily relocated from offices most affected.

The Association of British Insurers (ABI) said early estimates of the damage inflicted by the bombing, which have run as high as £1bn, may prove widely exaggerated.

It said the damage was likely to be of the same order as last year's Baltic Exchange bombing, which cost about £200m.

Sir Francis McWilliams, the Lord Mayor of London, said the Stock Exchange will be working. Lloyds' (insurance market) will be working, the Baltic Exchange will be working. Liverpool Street station will be open and London underground will be working.

But a public call from Mr David Mellor, the former cabinet minister, for a review of security policy echoed the private view of many ministers and Conservative MPs that the counter-terrorist effort needs to be sharpened.

Mr John Major, the prime minister, plans to use a speech this morning to the annual meeting of the EBRD to underline his government's determination not to bow to terrorism. The prime minister will also stress that the government will intensify its efforts to improve security against further attacks.

The government signalled last night that it was ready to pick up most of the bill for the devastation. Mr Norman Lamont, the chancellor of the exchequer, sought to underpin confidence in London's position by emphasising that the government was "playing its part" by acting as remanufacturer of last resort against terrorist attacks.

Mr Lamont, who is hosting the annual meeting of the European Bank for Reconstruction and Development, said: "I have every confidence that business will con-

Major under pressure from MPs as thousands of workers seek alternative sites for offices

ernment will intensify its efforts to improve security against further attacks.

continue to locate here and work here successfully. To do otherwise would be to succumb to terrorism."

That message was echoed in private talks yesterday between Sir Francis and Mr Major, who indicated that the government would stick to its commitment to underwrite the insurance costs, even though legislation to set up such arrangements has not yet been passed by the House of Commons or the UK lower house.

Mr Major has invited the Lord Mayor to another meeting this week in Downing Street to discuss further action to tighten security in the City.

In the City, officials said at least two buildings would be demolished and another 20 would need important structural repairs.

One man died and 44 were wounded in the explosion on Saturday, for which the IRA formally claimed responsibility on Sunday afternoon. The dead man was Mr Ed Henty, a News of the World photographer.

An area around the site of the bomb outside the church of St Ethelburga the Virgin in Bishopsgate was still sealed off late yes-

terday as experts searched for evidence and engineers examined the safety of the buildings.

Police said warning calls came into newspapers between 9.30am and 10.05am on Saturday. An officer at the scene yesterday admitted there was little the police could do about the suspect pick-up truck before the blast except clear the area. "All we could do was evacuate the area," he said.

The blast affected a wider area than the bombing at the Baltic Exchange in April last year.

Spirit of the blitz returns to the City

By Richard Donkin and Peter John in London

THE SPIRIT of the blitz returned to the City of London yesterday as an army of contractors' lorries queued at first light down London Wall, waiting to help repair the damage caused by the latest terrorist attack.

"It was like the troops waiting to embark on D-Day," said a Guildhall official. Platoons of glaziers had started out for the City before first light.

By 7.00am, as key holders moved among the rubble and police cordons in the drizzle, about 200 contractors were waiting at the Guildhall. City landlords were on hand offering office space to those displaced by the blast. Two hours later the crowd had swelled to 600.

Inside the Lord Mayor was telling the world that white the pictures told a story of devastation the spirit of London would beat the Irish Republican Army. Throughout the day he held the line.

At St Paul's Cathedral the Dean, the Rev Eric Evans, was moved to draw an historical metaphor: "This great city has faced plague, pestilence, fire and the blitz and it has won through. It will do so again and the IRA have no more hope of killing the spirit of London and its people than Hitler had."

Many of the victims were cared for at St Bartholomew's Hospital. Few could resist reflecting that if its history is abruptly ended by government closure the City may indeed lose a vital amenity which has served it through many wars.

In St Botolph's Churchyard spring blossom, blown from trees by the blast, mingled with shards of glass. Its leaded windows were bowed, and its heavy doors cracked, but the church had survived.

St Botolph's was silent, but a few hundred yards away the bells rang out for morning service at St Michael Cornhill, one of the City's Wren Churches which suffered damage to some of its stained glass windows.

The Rev David Burton Evans, the rector, had guided his choir and congregation under the police tapes. The churchgoers,

Yeltsin heads for qualified win in Russian referendum

By John Lloyd and Leyla Boulton in Moscow

EARLY indications from the Russian referendum last night suggested President Boris Yeltsin could achieve a qualified victory in his effort to win a mandate for sweeping constitutional and economic reform.

The results are certain to reactivate, in heightened form, the struggle between the president and the conservative-dominated parliament as each interprets the referendum differently. If the early results are confirmed, Mr Yeltsin will claim a mandate for change, while parliament will insist that his failure to win the majority of the 10.6m electorate has deprived him of authority for radical action on any issue.

A Russian television exit poll of 2,400 people in 16 cities across the country showed Mr Yeltsin winning 75 per cent of the electorate and on which the president's supporters - though not Mr Yeltsin himself - had advised a *Yes*.

The turnout was reported by local representatives of the president to be averaging 60 per cent or a little over - not high by Russian standards, but higher than feared by some of the president's aides, especially in good weather which tempted many to their country houses. By mid-afternoon it was clear that more than 50 per cent had voted - the qualifying mark for the referendum to be valid.

The lowest turnout - of 20 per

cent by early evening - was recorded in the autonomous republic of Tatarstan.

Voting stations appear to have been provided across the vast Russian landmass, but there were complaints of violations from the president's side. The Public Headquarters for the Referendum, a pro-presidential organisation, alleged that voting stations had remained closed in the city of Chelyabinsk east of Moscow until noon rather than opening as ordered at 7am and that copies of the fiercely anti-Yeltsin Sovyetskaya Rossiya daily, with instructions to vote against the president, had been placed in some districts' polling booths.

In the city of Tula to the south, international observers were denied access to the stations.

Mr Yeltsin, in an eve-of-poll address on television, stressed the importance of the poll when he said that the referendum was "our chance to peacefully and lawfully strengthen the state" and promised economic decrees aimed at cutting the flood of credits, laying the basis for private property and safeguarding Russia's interests.

NEWS: INTERNATIONAL

Muscovites back Yeltsin at the polls

By Edward Ball and Andrew Gowers in Moscow

RUSSIA: AT THE headquarters of the Russian Writers' Union - alias polling station number 3 in Moscow's Krasnopresnenski district - they were doing a brisk trade yesterday lunchtime. Of the 3,000 voters registered for the area, 500 had trooped in from the spring sunshine during the 5½ hours since polls opened. An informal survey suggests they were overwhelmingly voting Yes to Yeltsin.

Pavel Kozen, first voter of the day, anticipated the emerging trend in his answers to the main ballot questions: yes to Yeltsin, yes to his economic reforms, no to pre-term presidential elections, and yes to parliamentary elections - in the words of the campaign slogan, da, da, niet, da.

Nina Malachkova, an 83-year-old "veteran of labour" from Soviet days and an official poll observer, had been at station 3 since 6.30 am. Chivvying dawdling voters in slippers and housecoat, she had no doubt about how they should vote. "My whole family is united in support of Yeltsin and reform, and so is a majority of people in Moscow. Life is very hard, but most people know that without these reforms it would be worse."

Moscow is not typical, not least because its voters have been under a constant barrage of referendum propaganda. But street interviews yesterday revealed an interest in, and understanding of, the referendum that seemed to belie the image of the post-Soviet citizen

as downtrodden and apathetic.

At Izmailovo market, a sprawling bazaar in the shadow of a sports stadium on the outskirts of Moscow, lunchtime buying and selling was keeping many from the polling booths. But all the traders surveyed had voted or intended to.

Volodya Rusin, 27, a caretaker during the week but a hawker of Soviet memorabilia at the weekend, was for Yeltsin, although his support for the president was less than enthusiastic. "They used to call what I am doing speculation," he said. "If Yeltsin loses, communism will come back and we'll have to stop trading. If Yeltsin wins, at least things won't get any worse."

Viktor Sensov, a journalist and bookseller, had voted for Yeltsin but against his policies. "We are against the parliament, but we are concerned about Yeltsin," he said. "He is a man with courage but without policies."

Tatyana Sultanova, another bookseller, refused to endorse either the president or his parliamentary opponents but voted for new elections for both. "I am against all of them, because all they do is help themselves. I want young and clever people to enter politics."

But for the young, Yeltsin still seems to promise a better future. Shaking his thurst outside a cafe, Mikhail Borokov, 24, a worker in the ZIL limousine plant, said: "Things will get better if Yeltsin wins, but it will take five to 10 years. Under communism young people couldn't breathe. But Yeltsin is giving everybody the chance to trade, to own land, to be free. Younger people believe in Yeltsin because they have time to wait."

'I voted yes to all the questions - that's what we're supposed to do, isn't it?'

By Gillian Tett in Tula

ELENA Leskova, a 26-year-old teacher from the Russian town of Tula, south of Moscow, stood in the polling station at school number 45 yesterday and gave a sheepish grin.

"Last week I thought I wouldn't vote. I'm fed up with politics," she said. "But today the weather isn't so good and we didn't go to our dacha, so in the end I voted for Yeltsin."

Judging from the scenes at the polling station in this industrial Russian city yesterday it appeared that Ms Leskova was not alone in her indecision. Although the turnout in the region had reached 50 per cent by mid-afternoon - the level needed nationally to render the first two questions on the referendum valid - there were signs of the apathy and uncertainty that surrounded the referendum, especially outside Moscow.

"Compared to before, the turnout is not very good. But it's better than we expected," said Ms Nadezhda Zabotina, head of the election committee at the Tulachermet factory, as she sat ticking off the voters on multi-coloured, hand-drawn charts. Like most polling stations the factory was playing music and selling cut-price snacks in an effort to attract the voters.

The expectation yesterday was that President Boris Yeltsin would receive a majority in this town, but not a large one.

Although he received a warm welcome here on a visit during his presidential campaign two years ago, support among the regional council and local factory directors has evaporated, in part because the town's many arms factories have suffered from cuts in defence spending.

Slightly over half the people questioned at polling stations yesterday said they had voted for Mr Yeltsin, some out of enthusiasm, others from habit. "I voted yes to all the questions - that's what we're supposed to do, isn't it?" said an 81-year-old pensioner, as she shuffled out of the polling station, clutching a pot of milk.

Further along the street a group of young soldiers said they had mostly voted for Mr Yeltsin. But about a quarter said they had voted against him, with many others refusing to answer. "I voted against him because he has betrayed his promises and it's so hard to live on our student grants," said Sergei, 22, a student at the local engineering institute.

Against a background of rumours of attempted vote rigging, every voting paper had been signed in duplicate by the election committees, and the ballot boxes

A Muscovite votes in front of a statue of Lenin, founder of the Soviet state

stamped with the old Soviet war seal. Observers from the region's democratic movements and Russian Communist party were present at most stations.

Several US observers were also in attendance. But reflecting the political disputes now bubbling in the regions, the local election committee had refused to recognise them officially. "We don't want any foreign observers or journalists here. We have enough experience of running elections," said Mr Andrei Tuyarkin, chairman

of the regional election committee.

However, the complexities of the vote, which required voters to deal with four separate pieces of paper, left many confused. "It's a very crude system," said Mrs Rufina Vitass, 65, who had arrived at a polling station with two other friends to vote for Mr Yeltsin. After receiving their ballot papers, they spread them out on a table and loudly argued over them for almost 10 minutes before agreeing on the "correct" answers.

Europeans look for US lead on Bosnia

By Lionel Barber in Middelfart

EC FOREIGN ministers left open the possibility of using military force against the Bosnian Serbs at the end of their two-day meeting at Hvidslund Castle in Denmark, but made it clear they will exert that option with profound reluctance and only under pressure from the US.

Mr Niels Helveg Petersen, the Danish foreign minister who chaired the talks, echoed majority sentiment when he told a news conference yesterday that he remained unconvinced about the value of military intervention. "I have great difficulty in seeing the really positive aspect and why it would go a long way to solve the problem [in Yugoslavia]."

But Mr Petersen, a member of Denmark's Radical Liberal party, which has a strong pacifist streak, seemed unclear whether the tighter UN sanctions due to go into effect today would persuade the Bosnian Serbs to sign the Vance-Owen plan sponsored by the EC and UN.

After being reminded that Serbia-Montenegro - the rump republics of former Yugoslavia

- had already been threatened with expulsion from all international organisations without obvious effect, Mr Petersen issued a correction. On April 30, a meeting of the United Nations Industrial Development Organisation was due to take place, and he for one was adamant that Serbia should not be allowed to attend.

Ministers insisted, but without great conviction, that the tighter sanctions approved by the UN a week ago would start to bite. They noted the raging inflation in Serbia, and the sharp fall in imports, and they pledged to enforce the sanctions more effectively - possibly through a "Super Co-ordinator" who could make the many international organisations such as the CSCSE, West European Union, EC, and the United Nations work more efficiently.

This week, Mr Warren Christopher, US secretary of state, or possibly Mr Reginald Bartholomew, the US special envoy, is expected in Europe for further consultations with the UK and France. He will discover an EC hesitant, divided and frustrated - and once again looking to the US for a lead.

Despite their common reservations about military intervention, the French and British positions are blurred because London does not share Paris's desire for a new UN resolution. Partly, this reflects France's desire not to be marching to US orders; but it also suggests France believes there are political benefits in Russian support.

Britain set on closer EC ties

By Lionel Barber

BRITAIN yesterday signalled that it intends to join its EC partners in closer European political and economic co-operation if Denmark rejects the Maastricht treaty in next month's referendum.

Mr Douglas Hurd, UK foreign secretary, said air strikes needed to be consistent with international law, with due regard to UK troops and the overall UN humanitarian effort to supply besieged towns.

Despite their common reservations about military intervention, the French and British positions are blurred because London does not share Paris's desire for a new UN resolution.

Scalfaro steps up hunt for new PM

By Robert Graham in Rome

ITALIAN President Oscar Luigi Scalfaro yesterday put strong pressure on the leaders of the main parties to co-operate in forming a new government as quickly as possible.

After three days of consultations with all 16 parties represented in parliament, there was little sign that any of the leaders had shifted from entrenched positions. This was despite Mr Scalfaro's aim to have a new government agreed at the latest by today.

Mr Scalfaro alluded to widely contrasting views when he wound up his formal consultations yesterday. "The difficulties are there for all to see, and everyone must confront them with absolute clarity and calm," he said. It is the first time that an Italian president

has assumed such a direct role in forming a new government. Mr Giuliano Amato, the Socialist prime minister, handed in the resignation of his four-party coalition last Thursday following the overwhelming referendum vote in favour of electoral reform. However, Mr Scalfaro has yet formally to accept the government's resignation.

In the search for a new prime minister, the Christian Democrats have refused to drop their objections to the candidature of Mr Giorgio Napolitano, the highly respected former communist who is leader of the Chamber of Deputies. Mr Napolitano has been proposed by the Party of the Democratic Left (PDS) to head a non-partisan "institutional" government.

The Christian Democrats say

they favour a government with a clear political base in parliament rather than relying on the prestige of a bipartisan figure to secure a majority.

Mr Mino Martinazzoli, the Christian Democrat leader, has been unenthusiastic about the candidature of Mr Mario Segni, the referendum movement leader who is backed by the Lombard League and as an alternative by the PDS.

Among possible compromise candidates yesterday were the names of Mr Amato himself, Mr Leopoldo Elia, a Christian Democrat senator and former president of the constitutional court; Mr Romano Prodi, the distinguished economist and former chairman of Iri, the state holding company; and Mr Carlo Azeglio Ciampi, the veteran governor of the Bank of Italy.

By Robert Graham

MR Giulio Andreotti has raised the stakes in his battle with magistrates seeking to remove his parliamentary immunity so that he can be questioned for allegedly consorting with the Mafia.

By accusing the Palermo magistrates of conspiring to discredit him with cooked evidence from former Mafia "supergrasses", the Italian life senator and former prime minister is no longer merely protecting his own reputation. He has placed the 23-member Senate commission hearing his case in an increasingly awkward position.

The hearing, which began on April 14, has turned into an inquisition that can now reach one of only two conclusions. Either his parliamentary colleagues regard him as "economical with the truth" or they reject the evidence of the Palermo magistrates.

If Mr Andreotti loses his immunity, parliament will be seen to have deserted Italy's best known politician and confirmed the links long suspected at the highest level between the Christian Democrat party and the Mafia.

If the decision goes the other way the public will be convinced that Mr Andreotti is hiding behind the unacceptable device of parliamentary immunity, and his own party will be the chief loser.

More important, any rebuff to the Palermo judiciary will undermine the state campaign against the Mafia. Mr Giacomo Caselli, the Palermo attorney-general, was brought in from Turin last year after the killings of the two leading anti-Mafia magistrates, Mr Giovanni Falcone and Mr Paolo Borsellino, to

Tommaso Buscetta, Mr Francesco Maniolo and Mr Baldassare Di Maggio. Both Mr Buscetta and Mr Maniolo are confessed senior members of Cosa Nostra living in the US under witness protection programmes. Their evidence has been central to prosecution cases in all the main Mafia trials of the past seven years; evidence accepted up to, and including, the appeal court. Mr Di Maggio has been co-operating with the

Any rebuff to the Palermo judiciary will undermine state's anti-Mafia campaign

deci decisively with the Sicilian Mafia, Cosa Nostra.

He has put behind bars several top figures in Sicily's organised crime network, including Mr "Totò" Riina, the alleged "boss of bosses". The key has been the use of former Mafia figures who have agreed to give evidence under plea-bargaining programmes - the *penitenti* (supergrasses). Their evidence has led to the allegations against Mr Andreotti.

The evidence against Mr Andreotti comes from three main sources - Mr

Mafia's point of reference in Rome. The specific allegations range from his being party to the decision by the Sicilian Mafia to the 1982 murder of General Carlo Alberto de la Chiesa, the Palermo chief of police, to his links with Mr Salvatore Lima, the Euro-MP murdered last year by the Mafia and now acknowledged in a report by the parliamentary anti-Mafia commission to be associated with Cosa Nostra.

To these accusations last week came Mr Di Maggio's testimony of being present when Mr Andreotti met Mr Riina, Mr Lima and other Mafia leaders in Palermo in September 1988. Mr Andreotti has belittled the evidence as either hearsay or unreliable.

On Thursday his allies on the Senate commission (a majority who reflect faithfully the composition of the outgoing government coalition) secured a further delay of five days. The excuse was the need to know the names of individuals left blank by Palermo magistrates in the latest set of documents supplied this week. The names had been omitted to protect the secrecy of other anti-Mafia investigations in progress. But this delay has merely heightened the atmosphere of confrontation.

Emu star unruffled by market strains

Duisenberg says currency union plans are on track, writes Peter Marsh

WITH an easy manner, rugged looks and a shock of white hair, Mr Wim Duisenberg has the appearance of an ageing film star. As a leading light in the European soap opera of moves to economic and monetary union (Emu), he will have plenty of opportunity to be centre stage in the months ahead.

Chairman of the European Community's committee of central bank governors and head of the Dutch central bank, Mr Duisenberg appears unruffled by recent currency market strains. He welcomes last week's cut in interest rates by the Bundesbank as giving Europe a "psychological boost".

Mr Duisenberg, who is today giving his views about the European economy at the launch in Amsterdam of the Dutch bank's annual report, reckons plans for European monetary union are on track, even though he believes only a relatively small group of "core" EC nations may join the first phase of full currency union with one central bank.

The 57-year-old economist stands out in the somewhat

Wim Duisenberg: apostle of open government

staid central-banking community for his colourful and direct comments: He is probably one of the leading candidates for the future presidency of a pan-European central bank, assuming it is set up

according to the Maastricht schedule towards the end of this decade.

Mr Duisenberg once described the Bundesbank as being "like whipped cream: the more you beat it the harder it gets".

Last week he ruffled feathers in London by criticising the UK government for not playing by the rules during its short-lived tenure in the Exchange Rate Mechanism.

An apostle of open government, who was called in by a Labour-led Dutch government in the 1970s for a five-year spell as finance minister, Mr Duisenberg has for some time invited 10,000 school or university students a year into the Dutch central bank to introduce them to high finance. He took over as bank governor 12 years ago and is looking forward to a third seven-year term.

As for Emu, he is playing his part by presiding over a mass of technical work by the EC's central banks, including the design for a pan-European banknote, in preparation for this event. Next month in Denmark he will present to EC finance ministers an account drawn by the governors' committee of what went wrong during the currency crisis between last September and early this year.

He looks only slightly perturbed when asked to recall these events, which pushed the UK and Italy out of the ERM.

The central bank chief says the pound is welcome back into the ERM, even though if Britain wants to succeed in a future re-entry it would do well to follow the lead of Germany and Holland by making the Bank of England rather than government ministers responsible for monetary policy.

Mr Duisenberg gives the impression of being an Anglophile - he once wrote a thesis on the UK's balance of payments - and says he sympathises with Britain's predicament.

Because of the large mortgage debts among households and the preponderance of variable-rate rather than fixed-rate borrowing, decisions about short-term interest rates have much bigger political implications in Britain than in most other European nations.

Even so, an independent Bank would be a vital step in increasing financial markets' confidence.

He believes that as a trading nation Britain stands to gain by being part of a single-currency area, even with the inevitable loss of sovereignty and historical wrench. "The Netherlands once had an empire too," he quips.

Union leaders urge E Germans to vote for strike

By Quentin Peel in Bonn

TRADE UNION leaders across Germany called on steel and engineering workers in the eastern states to vote for all-out strike action today to protect their pay deal for rapid wage equalisation with the west.

They warned that cancellation of the contract could undermine nationwide collective bargaining in west Germany as well as in the east.

The outcome of the strike ballot in the states of Saxony and Mecklenburg-Vorpommern over the next three days is in the balance, with a 75 per cent vote of all members needed to go ahead with the action.

If they vote in favour, the giant IG Metall union is expected to launch the strike from May 3, with a warning that it could last for months.

Employers in the ailing eastern steel and engineering industries say that 100,000 workers out of some 320,000 could lose their jobs if the

strike goes ahead. They are refusing to pay more than a 9 per cent pay rise from April 1, compared with a deal agreed two years ago to pay a 26 per cent increase on the wage rates existing then - equivalent to a 15.5 per cent increase on current rates.

Mr Franz Steinbühler, leader of IG Metall, told a rally of some 60,000 workers in Leipzig on Saturday that allowing the employers to abandon their pay deal in east Germany would threaten collective bargaining in the whole country.

"We did not vote for reunification [of Germany] just in order to allow the employers to turn east Germany into a cheap-wage colony," he said.

However, he left a hint of compromise: if the employers would cancel their legal move to abrogate the eastern pay deal, the union would immediately return to the negotiating table and discuss the timescale of wage equalisation, he said in an interview with the *Bild am Sonntag* newspaper.

Export hopes ease industrial gloom

By Quentin Peel

THE GLOOM in west German industry eased marginally in March, thanks to hopes of higher export orders, although both production and order books continue to shrink.

That is the main conclusion of the monthly report on the German business mood published by the Munich-basedifo

In contrast, the more optimistic mood of those manufacturers still in business in east Germany has worsened, with both the current business situation and the outlook for the next six months, seen to be growing less favourable.

The average level of order books in west German industry has dropped from 2.6 to 2.5 months' production since last December, while capacity utilisation has slipped from 80.5

to 78.5 per cent, the institute reports.

Production plans for the coming three months in the west are being sharply reduced, but the expectation is for a continuing slowdown in price rises too.

In primary product industries, such as chemicals, paper and cellulose manufacturers, the decline in pessimism was also reported, although not directly related to exports.

Investment goods producers are more sanguine about export opportunities later in the year, although the overall mood remains extremely pessimistic. Orders remained at the same level as February.

As for consumer durables, there was a stabilisation in orders for electrical goods, but a continuing decline in car orders, according to survey participants.

Morocco ferry link postponed

By Tom Burns

CENARGO, the UK marine group, has postponed the inauguration of its ferry service linking the Moroccan port of Nador and Almeria in south-east Spain to allow time for an agreement between the Rabat and the Madrid governments over the new shipping link.

Mr Michael Hendry, Cenargo's chairman, said yesterday the service, which was scheduled to start today in defiance of the Spanish authorities, would commence in 10 days time. He expected Morocco and Spain to amend next week an existing bilateral arrangement that shares out the ferry services between the two countries.

Cenargo claimed it was legally entitled to operate the ferry under the terms of the EC's single market deregulation of cabotage between Community members and third nations. Spain however, insists changes must be introduced to their agreement with Morocco before the EC's directive can be implemented.

In addition to forcing up interbank rates the Bank of Spain is thought to have spent around \$10bn of its reserves in the past few days to avert a devaluation. Last Friday, the peseta dropped to an historic low in the ERM of Pt74.00 against the DM.

Mr Carlos Solchaga, finance minister, pledged at the weekend to keep the peseta within

Peseta remains vulnerable to further attacks

By Tom Burns in Madrid

A BELIEF in the international money markets that Spain's foreign exchange reserves have been drastically depleted is likely to prompt fresh attacks on the peseta, now the weakest currency inside the European exchange rate mechanism.

The reserves are understood by traders to have fallen as low as \$20bn, well down on the \$50.4bn recorded at the end of the 1992 and below the \$30bn level considered by the Finance Ministry to be the minimum amount needed to defend the peseta.

In addition to forcing up interbank rates the Bank of Spain is thought to have spent around \$10bn of its reserves in the past few days to avert a devaluation. Last Friday, the peseta dropped to an historic low in the ERM of Pt74.00 against the DM.

Mr Carlos Solchaga, finance minister, pledged at the weekend to keep the peseta within

the mechanism. "Our friends and allies in the EMS... are convinced that exchange rate stability is good for the peseta and for the EMS and that the actual level of the peseta is realistic," Mr Solchaga said.

But the Bank of Spain, which earlier this year intervened when the peseta weakened to Pt72 against the D-Mark, now appears under pressure from the markets to accept a rate below the peseta's central parity. Analysts say the peseta could be pushed further down on its 6 per cent ERM band to Pt75.75 to the D-Mark, just off its Pt77 floor.

The attacks on the currency are being fuelled by Spain's recession and by predictions of political uncertainty after general elections on June 6. An opinion poll published yesterday by Barcelona's *La Vanguardia* newspaper put the centre-right Partido Popular party marginally ahead of the ruling socialists but well short of gaining a governing majority.

UK warns US against bilateral trade accords

By Charles Leadbeater
in Tokyo

THE BRITISH government yesterday warned the Clinton administration in the US that it would endanger the future of the free trade system if it were to press for bilateral agreements to guarantee shares of foreign markets in specific products.

Mr Neil Hamilton, UK trade minister, delivered the warning during a meeting in Tokyo with Mr Ron Brown, US commerce secretary. They were in Tokyo at a meeting of trade and industry ministers from eastern Europe and the Group of Seven leading industrialised countries to plan assistance for

industrial restructuring in eastern Europe.

Mr Hamilton said he told Mr Brown the UK was opposed to the "balkanisation of trade by bilateral agreements". The minister added: "It is clearly unhelpful to the Gatt world trade talks if countries as powerful as the US and Japan go off and negotiate bilateral agreements. It sets a very bad precedent which might encourage others to follow suit."

The British concerns were raised by recent statements from the US administration that it will seek trade agreements with Japan which would deliver measurable progress in opening Japanese markets.

The US and Japan are due to

Beijing to press for Gatt support

By Tony Walker in Beijing

CHINA will press the European Community this week to support its entry to the General Agreement on Tariffs and Trade, arguing that orderly international trading would be better served by its membership.

Mrs Wu Yi, the new minister of China's powerful ministry of foreign trade and economic co-operation, will head the country's team in the 12th session of the China-EC joint commission on trade and economic co-operation.

The Sino-EC meeting assumes more than usual importance this year because of the Gatt issue, and because of continuing European misgivings over China's large trade surplus of \$13bn with EC member states.

Speaking on the eve of her departure for Europe, Mrs Wu called on the EC to be more understanding of China as a developing country with low average per capita income. "We still need international understanding and support, including that from the EC," she told China Daily.

Beijing has been disappointed by the tough US attitude to its Gatt entry. The US is making the running on resolving details of Chinese access to the world trading body. One of Mrs Wu's aims will be to loosen EC support for the US position, which China believes is partly dictated by US domestic concerns.

Talks over Hong Kong will resume this week

By Tony Walker in Beijing

BRITAIN and China have agreed to resume talks this week on the vexed Hong Kong issue, having concluded a first round at the weekend.

Both sides are maintaining a virtual news black-out on any progress, with spokesmen non-committal on details since the first round resumed on Thursday in Beijing. Britain's chief negotiator, Sir Robin McLaren, ambassador to China, said after negotiations had concluded on Saturday: "We're working hard and there's hard work ahead of us, too."

The talks - over plans by Mr Chris Patten, Hong Kong governor, to broaden the scope for popular participation in elections leading to China's takeover of Hong Kong in 1997 - could last for weeks or months.

Beijing has repeatedly denounced Mr Patten's plan, demanding his recall and referring to him in its official press as a prostitute and a petty thief. China claims that Mr Patten's plan for elections in 1995 runs counter to an agreement reached with London over arrangements for transition to Chinese rule. Beijing officials have charged Britain

with a breach of faith.

In Hong Kong, Mr Patten commented: "Both sides know there are very difficult issues we've got to resolve, but there has been a constructive approach. Both sides must be glad that the talks have started in such a sensible and balanced and businesslike way. I hope that we will be able to see progress over the next days and weeks."

In Beijing, a Chinese official was quoted by the official New China news agency as saying that China hoped Britain would "return to the correct path" over Hong Kong.

Funerals raise tension again

Patti Waldmeir on impatience with political talks in South Africa

SOUTH Africa yesterday braced itself for another round of potential violence at political funerals after the death by natural causes of Mr Oliver Tambo, elder statesman of the African National Congress and patron of the liberation struggle.

He had been in failing health after a stroke in 1989 and was no longer active in ANC policymaking, but remained a potent symbol of resistance to apartheid. ANC officials said they believed his funeral would be as large as that for Mr Chris Hani, whose violent death two weeks ago provoked a major political crisis in South Africa.

Within the next week to 10 days, South Africa will bury two political leaders - Mr Tambo (the date of whose funeral has yet to be announced) and Mr Andries Treurnicht of the right-wing Conservative party, who is to be buried tomorrow at a large

Tambo: ANC father figure

scale ceremony in Pretoria.

On Wednesday, a mass funeral will be held at Sebokeng township near Johannesburg, for the 19 victims of a massacre on the eve of Mr Hani's funeral last week. A funeral will also take place for

an interim constitution until elections, and principles for a future constitution. This last would include multi-party power sharing until the end of the century.

However, while the basis for agreement exists between the two main parties to the talks, others in the 26-party forum vehemently oppose certain aspects.

Mr Tambo, though his health kept him away from the negotiations, is credited with helping to engineer a shift in ANC policy in 1989 - the movement opted to negotiate rather than fight for an end to apartheid. On the edge of tears after his death on Saturday, Mr Mandela called him "my brother, my comrade, my friend and my colleague".

Mr Charles Nqakula, a former journalist, has been appointed general secretary of the South African communist party to succeed Chris Hani.

The Aids memorial quilt stretches along the Mall in Washington, where up to a million marchers were expected to rally yesterday to demand equal rights for US homosexuals. President Bill Clinton sent a letter to be read to the crowd, but his decision not to attend angered

many gay rights activists, who claim that he has backed away from some of his electoral campaign promises to them. "I believe that, if a million saxophone players had come to Washington today, Bill would be here," said one speaker.

Clinton fails to join in Barclays tax suit

By George Graham
in Washington

PRESIDENT Bill Clinton has broken with previous US government policy by deciding not to file a brief in support of Barclays Bank's suit against the California worldwide unitary tax law.

Past administrations have

always argued with Barclays that California's efforts to tax companies on a percentage of their worldwide profits, rather than on the profits they actually make within the state, interfered with the federal government's constitutional prerogative to "regulate commerce with foreign nations".

The UK government and 19 other industrialised countries have filed arguments against the California tax, which runs

against the bilateral tax treaties between the US and many other nations. British MPs are expected to argue for retaliation, as permitted by a 1985 UK law, during the second reading of the finance bill in parliament today.

The Barclays case has been

rumbling through the state and federal courts for more than a decade. California's state supreme court ruled against Barclays last year and the issue may be approaching its final round in the US Supreme Court.

Brazil launches plan to stimulate growth

By Christina Lamb
in Rio de Janeiro

involve no shock measures such as freezing prices or bank accounts.

The plan concentrates more on spending than saving, and is unclear on how to reduce inflation, now 30 per cent a month. Mr Franco's address did not mention inflation as a priority, though finance ministry officials say they hope to reduce inflation to 17 per cent a month by December.

This long-awaited first plan of the six-month-old government of President Itamar Franco was announced at a cabinet meeting on Saturday, broadcast live on television.

The plan, Brazil's sixth in seven years, is the first to

involve no shock measures such as freezing prices or bank accounts.

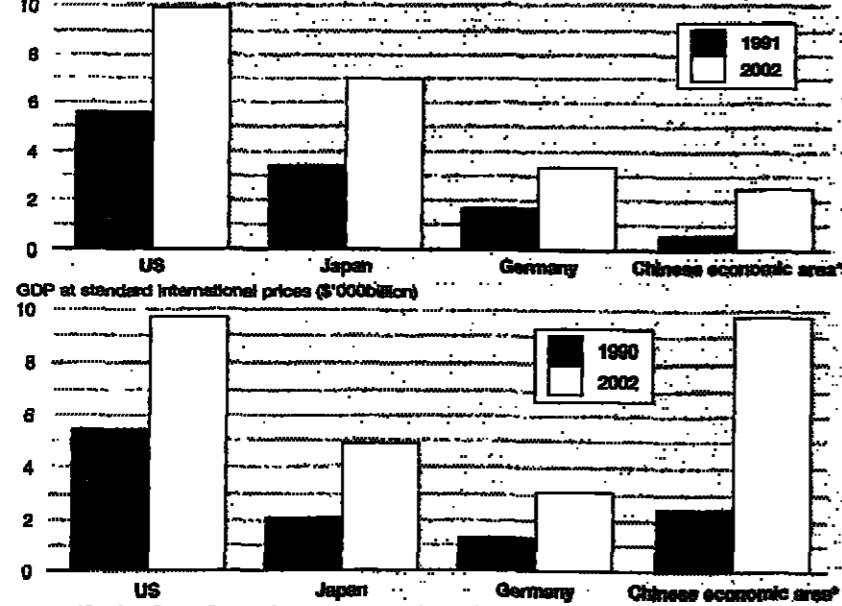

The plan concentrates more on spending than saving, and is unclear on how to reduce inflation, now 30 per cent a month. Mr Franco's address did not mention inflation as a priority, though finance ministry officials say they hope to reduce inflation to 17 per cent a month by December.

The plan will be presented to the International Monetary Fund this week by Mr Eliseu Rezende, Brazil's third finance minister in the last six months.

Analysts doubt that it will be

sufficient to achieve a new IMF accord in the near future.

Rise and rise of the Chinese economic area

China's potential emerging from behind the figures

CHINA is a large country with a big economy which is getting bigger by the year. But only now is it being understood quite how large and economically powerful China could become early in the next century - provided, that is, its development is not derailed by another of the bouts of inflation that have accompanied its impressive performance.

Chinese gross national product grew by an average 9 per cent a year over the last 13 years, far outstripping the growth rate of the population. The authorities may be about to put the brakes on to prevent over-heating, as at the end of the 1980s.

Growth rose last year to 12 per cent, but the year-on-year inflation rate also accelerated to 15.7 per cent in the first quarter of this year. But Chinese GNP in 1994 should still be four times larger than in 1978, when market-based economic reforms began.

Yet China's economic potential has been partly obscured from view by some strange World Bank statistics. According to the latest World Development Report, the dollar value of Chinese output per

person has been falling over the past decade.

It has dropped from \$410 in 1976 to \$370 in 1990 - one-sixtieth of US GNP per head. With China's population estimated at 1.13bn in 1990, total measured GNP was \$410bn, smaller than that of Canada, which was \$542bn, and the UK, which was \$908bn.

The reason for this strange result is the 500 per cent fall in the value of the yuan against the dollar since 1979. This has cut deeply into the dollar value of Chinese GNP, measured at national prices. But Chinese GNP is understated at current exchange rates because of the low prices of services relative to those in developed countries at market exchange rates.

One measure of this distortion is the large size of China's export sector relative to measured GNP. The value of Chinese exports has risen from \$13.7bn in 1979 to \$62bn in 1990, or 15 per cent of measured GNP. This implies that China's export/GNP ratio is twice that of the US, despite China's huge geographic size and relative isolation.

World Bank officials have never denied that these statistics are misleading. In the latest issue of *Global Economic Prospects* for developing countries, they have provided an alternative, more realistic measure of the potential economic size of the Chinese economic area - which includes Hong Kong, Singapore and Taiwan, as well as China - at the beginning of the next millennium.

The bank believes that China can maintain economic growth rates in excess of 7 per cent over the coming decade. Using its baseline forecasts, it estimates that CEA national output, measured at market prices, will be larger than that of the UK, Italy and France by 2012, although still only a quarter of US GNP.

The picture changes dramatically if GNP is measured instead by standard international prices for both traded and non-traded goods and services. On this basis, CEA output is already larger than that of both Germany and Japan.

By 2002, the bank estimates that CEA's GNP will have risen to \$9,000bn, marginally larger than that of the US.

Even then, GNP per head in the CEA would be lower - \$7,300 compared to \$36,100 in the US, \$37,900 in Japan and \$39,100 in Germany - but the gap would be much narrower than when measured at current exchange rates.

These alternative calculations also mislead. As a measure of economic welfare or quality of life, they make sense: people in the US, even if they cost far less in Beijing than in New York. But China can only convert the value of these haircuts into international goods at current exchange rates, which give little international purchasing power to those who provide them.

As the Chinese economy develops, the domestic price of these non-traded goods will gradually rise relative to the international prices of traded goods. But for now, GNP measured at standardised prices, while useful for some purposes, overstates China's presence on the world economic stage.

Edward Balls

IMF may seek to expand reserves

By Michael Prowse
in Washington

MR MICHEL Camdessus, managing director of the International Monetary Fund, is expected to press finance ministers at this week's IMF/World Bank meeting in Washington to support moves to expand the foreign exchange reserves of former communist and developing countries.

The IMF believes world trade is being artificially restricted because at least 40 countries have severe shortages of reserves.

It is pressing for a new allocation of special drawing rights, an international reserve asset equivalent to basket of the leading currencies.

A senior IMF official said a new issue of SDRs (\$32.5bn), 10 per cent of the expected demand for reserves resulting from increased global economic activity in 1992-1993, was required.

He said rich countries, which faced no shortage of reserves, should hand over a portion of any new SDR allocation to former communist and developing countries as loans or grants.

The IMF would oversee this process and impose conditions so that the reserves were used responsibly.

The official said opposition by many finance ministers to a new SDR issue - in effect an increase in global liquidity - made no sense because inflationary pressures were at their lowest for 30 years. Ministers had agreed an increase in the 1980s when inflation was higher.

The share of SDRs in total world reserves had fallen from about 5 per cent in the early 1980s to below 2 per cent.

NEWS: THE CITY BOMBING

● Aftermath likely to be worse than 1992 bomb ● Damage assessment may take several weeks ● Repairers tout for business

Unease over security as frustrations build up

By Richard Waters

ASSURANCES that business would continue as usual were again much in evidence as mopping up began yesterday after the second one-tonne bomb in little over a year.

But this time the questions being asked were more pointed, the unease among financial institutions more pronounced.

Sir William Purves, chairman of HSBC Holding, which owns Midland Bank as well as the Hongkong and Shanghai Banking Corporation, summed up the sense of frustration. "I am absolutely sure that the authorities are doing the best they can. It is very difficult. I'm sure to track down these people. But it does seem quite extraordinary that that quantity of explosives could be put in a truck and brought into the City."

The shock from this second bomb could have a bigger impact in the long term than the first. Sir William said: "At a time when there is a fair amount of competition for a future central bank of Europe, this must work against the case for it being in London."

The attack is likely to have little effect on where institutions such as National Westminster Bank and HSBC Holding - two of those worst hit - choose to do business. NatWest

operates at the heart of the UK financial establishment, while HSBC only moved its head office from Hong Kong to London at the start of this year. Through subsidiaries such as James Capel and Midland Bank, as well as through the London branch of the Hongkong Bank, it has one of the biggest presences of any financial institution in London.

The Corporation of London, the City's local authority, lists HSBC and NatWest - alongside BP, the oil giant - as among its biggest rate-payers, shouldering a large part of the Corporation's annual £700m budget. Large institutions such as these had already pressed after last year's bomb for a greater police presence to protect the City from terrorist attack and are likely to become more vociferous still this time around.

He pointed to the terrorist bomb this year at New York's world trade centre and to the assassination in the past two decades of the heads of two of Germany's biggest banks - Alfred Herrhausen of Deutsche Bank and Jürgen Ponto of Dresdner - as proof that other financial centres faced similar difficulties.

The Bank of England also waded in to the debate in defence of London's financial centre, which recorded £16.9bn of overseas earnings in 1991. "The experience of last time

The City establishment was yesterday dismissing the thought that London's competitive position was about to be undermined. Lord Alexander, chairman of National Westminster Bank, said: "At first glance, this is obviously bad for the City. But it does provide the opportunity to emphasise that it is business as usual the next morning, which is, after all, what the City stands for. I'm confident that, whatever the pressures, that remains competitive."

Sir Andrew Hugh Smith, chairman of the Stock Exchange - itself the target of terrorist bombs in the past - added: "It's perilously easy to get overwhelmed by the drama of events like this. Other centres have their problems though perhaps they haven't had two big bombs like us."

He pointed to the terrorist bomb this year at New York's world trade centre and to the assassination in the past two decades of the heads of two of Germany's biggest banks - Alfred Herrhausen of Deutsche Bank and Jürgen Ponto of Dresdner - as proof that other financial centres faced similar difficulties.

The Bank of England also waded in to the debate in defence of London's financial centre, which recorded £16.9bn of overseas earnings in 1991. "The experience of last time

Recent bomb attacks at financial centres

30/11/92: Alfred Herrhausen, chief executive of Deutsche Bank, killed in car by remote-control bomb at Bad Homburg, outside Frankfurt. Red Army Faction claim responsibility.

10/4/93: IRA bomb explodes in St Mary Axe, London, the day after the general election. Ten buildings severely damaged, including Baltic Exchange, Commercial Union building, Chamber of Shipping. Three people killed, 91 injured. Estimated £350m cost includes £250m of damage to property, the remainder being business interruption.

29/2/93: World Trade Centre, New York: six killed with more than 1,000 injured. Arrested suspects have links with the blind cleric Sheikh Omar Abdul-Rahman and his New Jersey Mosque. Estimates of insured claims run to \$1bn, with Lloyd's of London saying it will bear \$300m of this.

12/3/93: Bombay Stock Exchange among the worst-hit targets as 13 bombs explode across the Indian city, killing 250 people and wounding more than 1,400. Part of radical Islamic uprising in wake of Ayodhya trouble. Actual perpetrators said to be from Indian underworld, with Pakistan links. 44 arrests by April 2.

After the event, the clear up

estimated cost of £400m, was a big reversal for the credibility of London's securities markets - though the computer disaster had little effect on the operations of the markets.

Foreign financial institutions often complain of London's poor transport system or its heavy burden of regulation on the wholesale investment markets - though recent steps have reduced the second of these complaints. The threat of bombing, and the probable rise in the cost of insuring against it, could become the latest on the list of miseries.

The City's future security arrangements were already the subject of discussion yesterday. "There's no financial centre that is free from all risk, and we can't expect to be either," the Bank of England said. However, the Corporation, whose £700m annual budget supports an 800-strong police force, among other services, was working on plans yesterday to make the chance of a third bomb more remote.

"This has got to have some impact on security arrangements," said Sir Andrew Hugh Smith. "There will have to be some further tightening up."

The Corporation has been trying to discourage private cars from entering the City area, in part by turning side-streets into pedestrian areas. This process will be accelerated.

According to most estimates of the cost of last weekend's damage, the private-sector contribution to this insurance fund for the current year has been more than exhausted, leaving it to the British taxpayer to foot part of the bill - and the full cost of any further damage to large commercial buildings on the UK mainland from further terrorist attack over the coming year. Given this, it was thought highly probable yesterday that insurance premiums to cover the risk of terrorism will rise sharply in future years.

Damaged buildings may be destroyed

By Andrew Taylor and Christopher Price

AT LEAST one office building and a parade of shops will need to be demolished in the wake of Saturday's blast, construction experts said yesterday.

St Ethelburga's, one of London's oldest churches, was also destroyed in the blast. Two other offices, the headquarters of the Hongkong and Shanghai Banking Corporation and a building belonging to the National Bank of Abu Dhabi, were also severely damaged.

A decision on their future will not be taken until a full structural assessment can be made. The initial reaction of experts was that more windows had been destroyed than in the explosion which last year badly damaged London's Baltic Exchange, but that structural damage was less.

The streets around Bishopsgate are broader than those around the Baltic Exchange, which allowed the effects of the blast to spread.

Among the first engineers to be called out was the dangerous structures team run by Costain, the UK contractor. The unit is under contract to a consortium of 12 London boroughs and has been present at virtually every disaster in the capital during the past 20 years - including the Baltic Exchange bomb, the Brixton riots and the Iranian embassy siege in 1981.

Its first job yesterday was to ensure that damaged buildings were made safe for repair work to start and allow for emergency services to conduct more detailed searches for clues.

Mr John Milcock, the team's foreman, said: "It could be several weeks before the full extent and cost of the damage is known."

"First impressions are that three or four buildings may have suffered structural damage. In addition there are vast quantities of broken glass."

"The church has been wiped out and the offices next to it [Kansallis House, occupied by the Finnish bank Kansallis-Osake Pankki] are severely damaged. The Hongkong and Shanghai bank appears to have some of its pillars damaged. Almost all of its windows have been destroyed."

Mr Peter Bennett, deputy city surveyor for the City of London said: "Most of the damage to Hongkong and Shanghai bank was blast damage rather than structural. All the internal walls have been blown through."

Mr Bennett added that Kansallis House would have to be demolished as it was in a dangerous state. The blast had shattered the concrete frame and blown away some of the reinforcing.

The National Bank of Abu Dhabi at 90 Bishopsgate, next door to Kansallis House, was also severely damaged and might have to be pulled down, Mr Bennett said.

He said that a parade of Victorian shops on the corner of Wormwood Street and Bishopsgate would also have to be demolished.

Estimated insurance losses £300m'

By Richard Lapper

INSURED losses caused by Saturday's bomb attack are likely to exceed £300m, according to the Association of British Insurers, the industry trade association.

The ABI said the losses would be of the same magnitude as last year's City bombs. The pattern of payouts could also be repeated, it added. Two thirds of claims were for material damage - to property, fixtures and fittings - with roughly one third of payments compensating lost profit and rental income.

Mr Nick Balcombe, a loss assessor, said he expected losses to be more extensive and could exceed £1bn. "Many more buildings will have to come down. The Hongkong bank has had its guts ripped out. I don't think Bishopsgate will be open for some time."

Describing these and other estimates as "likely to prove wildly inaccurate," the ABI said most businesses affected are likely to have "carefully worked out contingency plans which should minimise disruption and keep down business interruption claims."

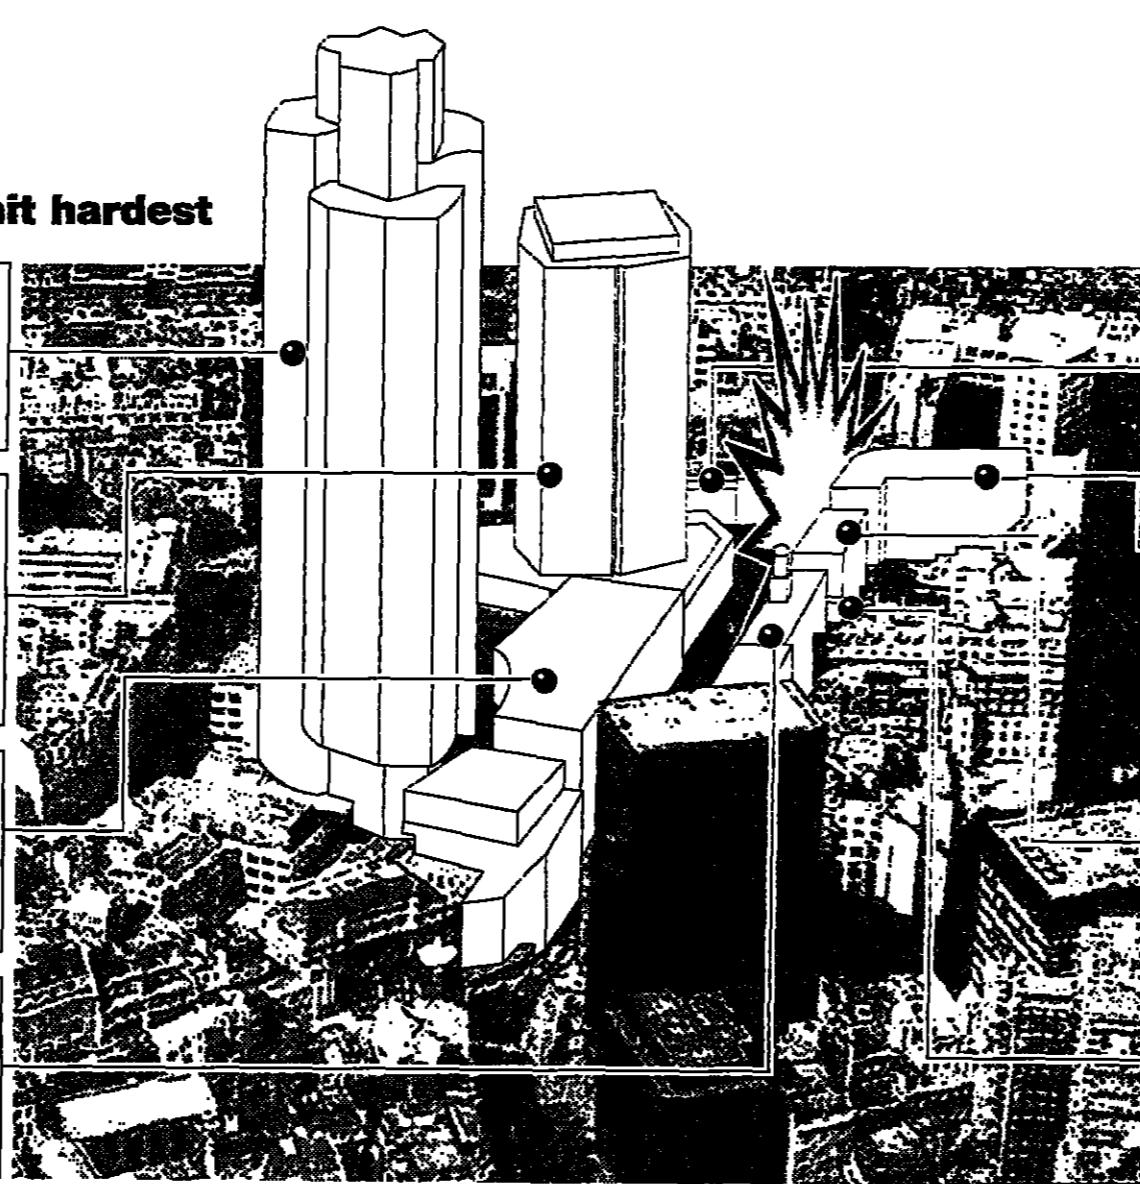

Where the blast hit hardest

NatWest Tower complex
No. 15 Bishopsgate. Sole occupier, National Westminster Bank. Structural damage to the tower is minor. The complex at street level has been blown through, although the damage is mostly superficial. Work is in progress to replace an estimated 3,000-4,000 sq metres of glass, and fittings.

No. 99 Bishopsgate
Main occupier is Hongkong and Shanghai Banking Corporation, but many floors are sublets to other tenants. The office block sustained serious damage. The blast blew through all the walls leaving just an outer shell. Damage was also sustained by some of the supporting pillars. Engineers are attempting to repair the building but are being hampered by falling glass. No decision has yet been taken on whether to demolish the building.

Palmerston House
No. 55 Bishopsgate. Sole occupier is Long Term Credit Bank of Japan. Serious blast damage has been sustained, but the structure remains intact. The fascia has been largely destroyed, along with internal fixtures and fittings. Engineers are engaged in further safety checks before repair work can start.

Nos. 38-68 Bishopsgate
Other offices and shops. Despite heavy superficial damage, the structures of the next few hundred yards of buildings remain sound. Glass and fittings have been blown out and some internal walls have collapsed. Repair work is being hampered by hazardous conditions.

Nos. 20-26 Wormwood Street
The Victorian parade of small retailing units bore the full impact of the blast, which ripped out frontages and inflicted serious damage. Demolition is considered likely.

No. 90 Bishopsgate
Sole occupier is the National Bank of Abu Dhabi. The building bore some of the brunt of the blast, sustaining structural damage. All the interior walls have been blown through. Demolition is under consideration. Engineers are being hampered by the poor state of the neighbouring building.

Kansallis House
Nos. 76-86 Bishopsgate. Partly sublet. The building took the full impact of the explosion. No internal walls or fittings have survived. The exterior has been extensively destroyed and reinforced concrete supporting pillars are dangerously exposed. A buckled wall is said to be supporting the entire structure. Demolition is a necessity. However, the bomb crater is making building work difficult.

St Ethelburga's Church
Smallest and one of the oldest churches in the City, it is now a pile of rubble, according to one visiting engineer.

Hongkong Bank Shattered NatWest tower unfit for use bombed again

By John Gapper in London and Simon Holburt in Hong Kong

MORE THAN 300 of Hong Kong and Shanghai Banking Corporation's 600 staff in London are expected to be at work today in different buildings, after the bank yesterday hastily re-allocated most of the work carried out at its Bishopsgate branch.

Hongkong Bank, a subsidiary of HSBC Holdings, said the most severe disruption would be through the loss of paper files. Papers such as letters of credit dating back three months were scattered and destroyed in the blast.

The bank had yesterday allowed to send managers into its office to retrieve computer data. It will today start re-running the data from a processing centre in Sheffield owned by Midland Bank, another HSBC Holdings subsidiary.

The bank said most of its offices inside the Bishopsgate building transferred their paper files to microfilm after three months, but customers with more recent dealings could suffer disruption.

The bank had to spend \$900,000 largely replacing windows, to repair damage to the same building caused by the IRA bomb that blew up the Baltic exchange a year ago. However, the damage this time was far more severe.

Sir William Purves, HSBC Group chairman, said the Hongkong Bank branch in Bishopsgate which concentrates on trade finance and corporate banking was "a relative

By John Gapper, Banking Correspondent

THE 600ft National Westminster tower, one of the City's landmarks, is likely to remain empty for some time. Up to a third of the 12,000 square metres of glass in its windows was shattered in the bomb blast.

The bank yesterday started allocating the 1,300 staff who work in the tower to desks at

other buildings in the City. It emphasised that none of its data processing or trading functions would be affected by the blast.

Nearly all staff and managers in the tower work on its UK branch business - about 50 work on international business - and NatWest said it did not believe their work would be substantially disrupted by having to move offices.

Mr Derek Wanless, the

bank's chief executive, said it was still assessing the extent of damage to the tower and surrounding buildings, including a hall where its annual shareholders' meeting was due to be held tomorrow. The meeting has been moved to the Whitbread Conference Centre in Chiswick Street.

Mr Wanless said damage to the tower was "substantially worse" than last year, when it lost about 160 windows in the

Baltic Exchange bombing. The bank expects to be able to make an assessment of damage by the end of the week.

He said there had been "slight damage" to the NatWest Markets investment banking subsidiary at 135 Bishopsgate, but trading and other operations would continue without interruption today, and clients would not be affected.

The bank said the tower, opened in 1981, had been "fully insured". It did not expect to lose files or data as a result of the blast, and operations such as credit cards and local branch services would be unaffected. NatWest's staff who are not needed for work immediately will be advised to take up to two days off work while the bank re-allocates functions. The bank said it was establishing a telephone service to advise employees.

It was not clear whether the

blast had been caused by a bomb or a gas leak.

Mr Wanless said: "We are

not sure what caused it, but

we are investigating it thor-

oughly."

He said the bank had not yet

decided whether to stay in the

building or move to another.

- Government likely to pay for much of damage
- Square mile's reputation dented
- Anti-terrorist campaign is criticised

Insurance costs expected to rise

Richard Lapper

CITY businesses could face big rises in insurance costs following Saturday's bomb attack, even though the government is expected to meet a large part of the bill.

Increases are almost inevitable because the cost of the damage is likely to exceed £300m, exhausting available insurance funds of Pool Re, the specialist reinsurer set up by UK insurance companies earlier this year to cover terrorism risk.

Insurers will provide some reinsurance for Pool Re, with the government guaranteeing all other claims.

"Unquestionably it looks like higher rates," said Mr Alan Fleming, executive director of the Association of Insurance and Risk Managers in Industry and Commerce (Aircim), which represents more than 300 insurance buyers.

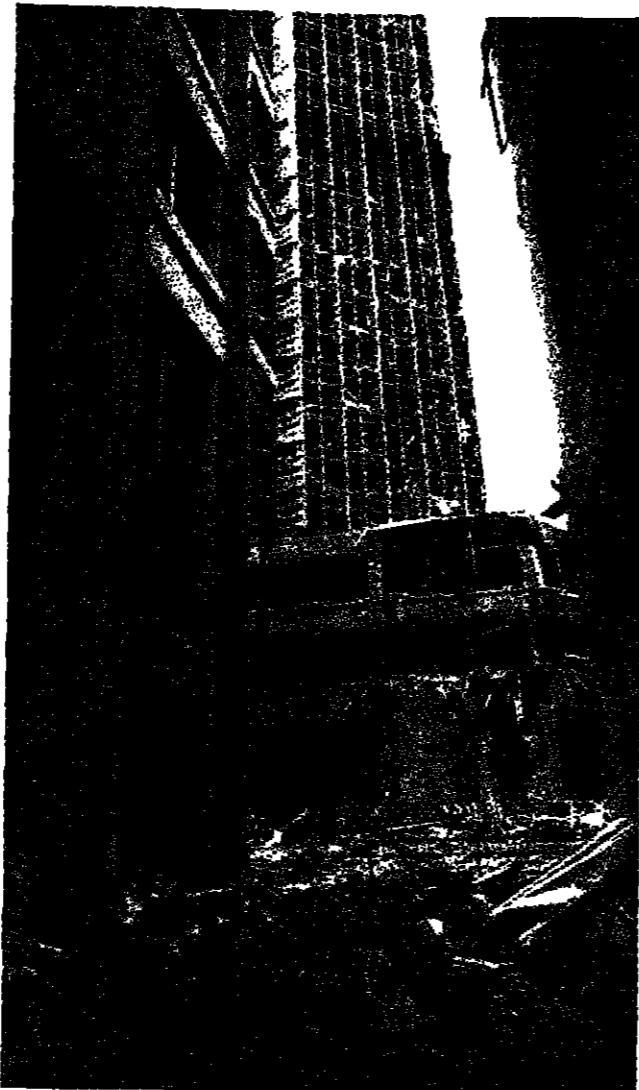

Mr Tony Baker, public affairs manager for the Association of British Insurers (ABI), also suggested increases were likely, with City businesses bearing most of the burden.

Mr Fleming suggested it might become necessary to make the purchase of terrorism insurance compulsory, possibly through the imposition of a standard levy on all commercial insurance policies.

He said: "The danger is that we will price some people out of the market. It has to be paid for one way or another. The only solution is to broaden it."

It also emerged that a number of insurance companies could be badly hit by claims on policies sold before terrorism was excluded from covers. Royal Insurance said yesterday that it had paid "several million" pounds to reinsurance these exposures with Pool Re. But it is understood some other companies are unprotected.

Business has had to pay more to protect itself from terrorist attack since insurers withdrew cover from standard commercial insurance policies last year after sustaining losses of more than £300m from last April's bomb attack in the City.

The tattered remains of the Hongkong and Shanghai Bank tower

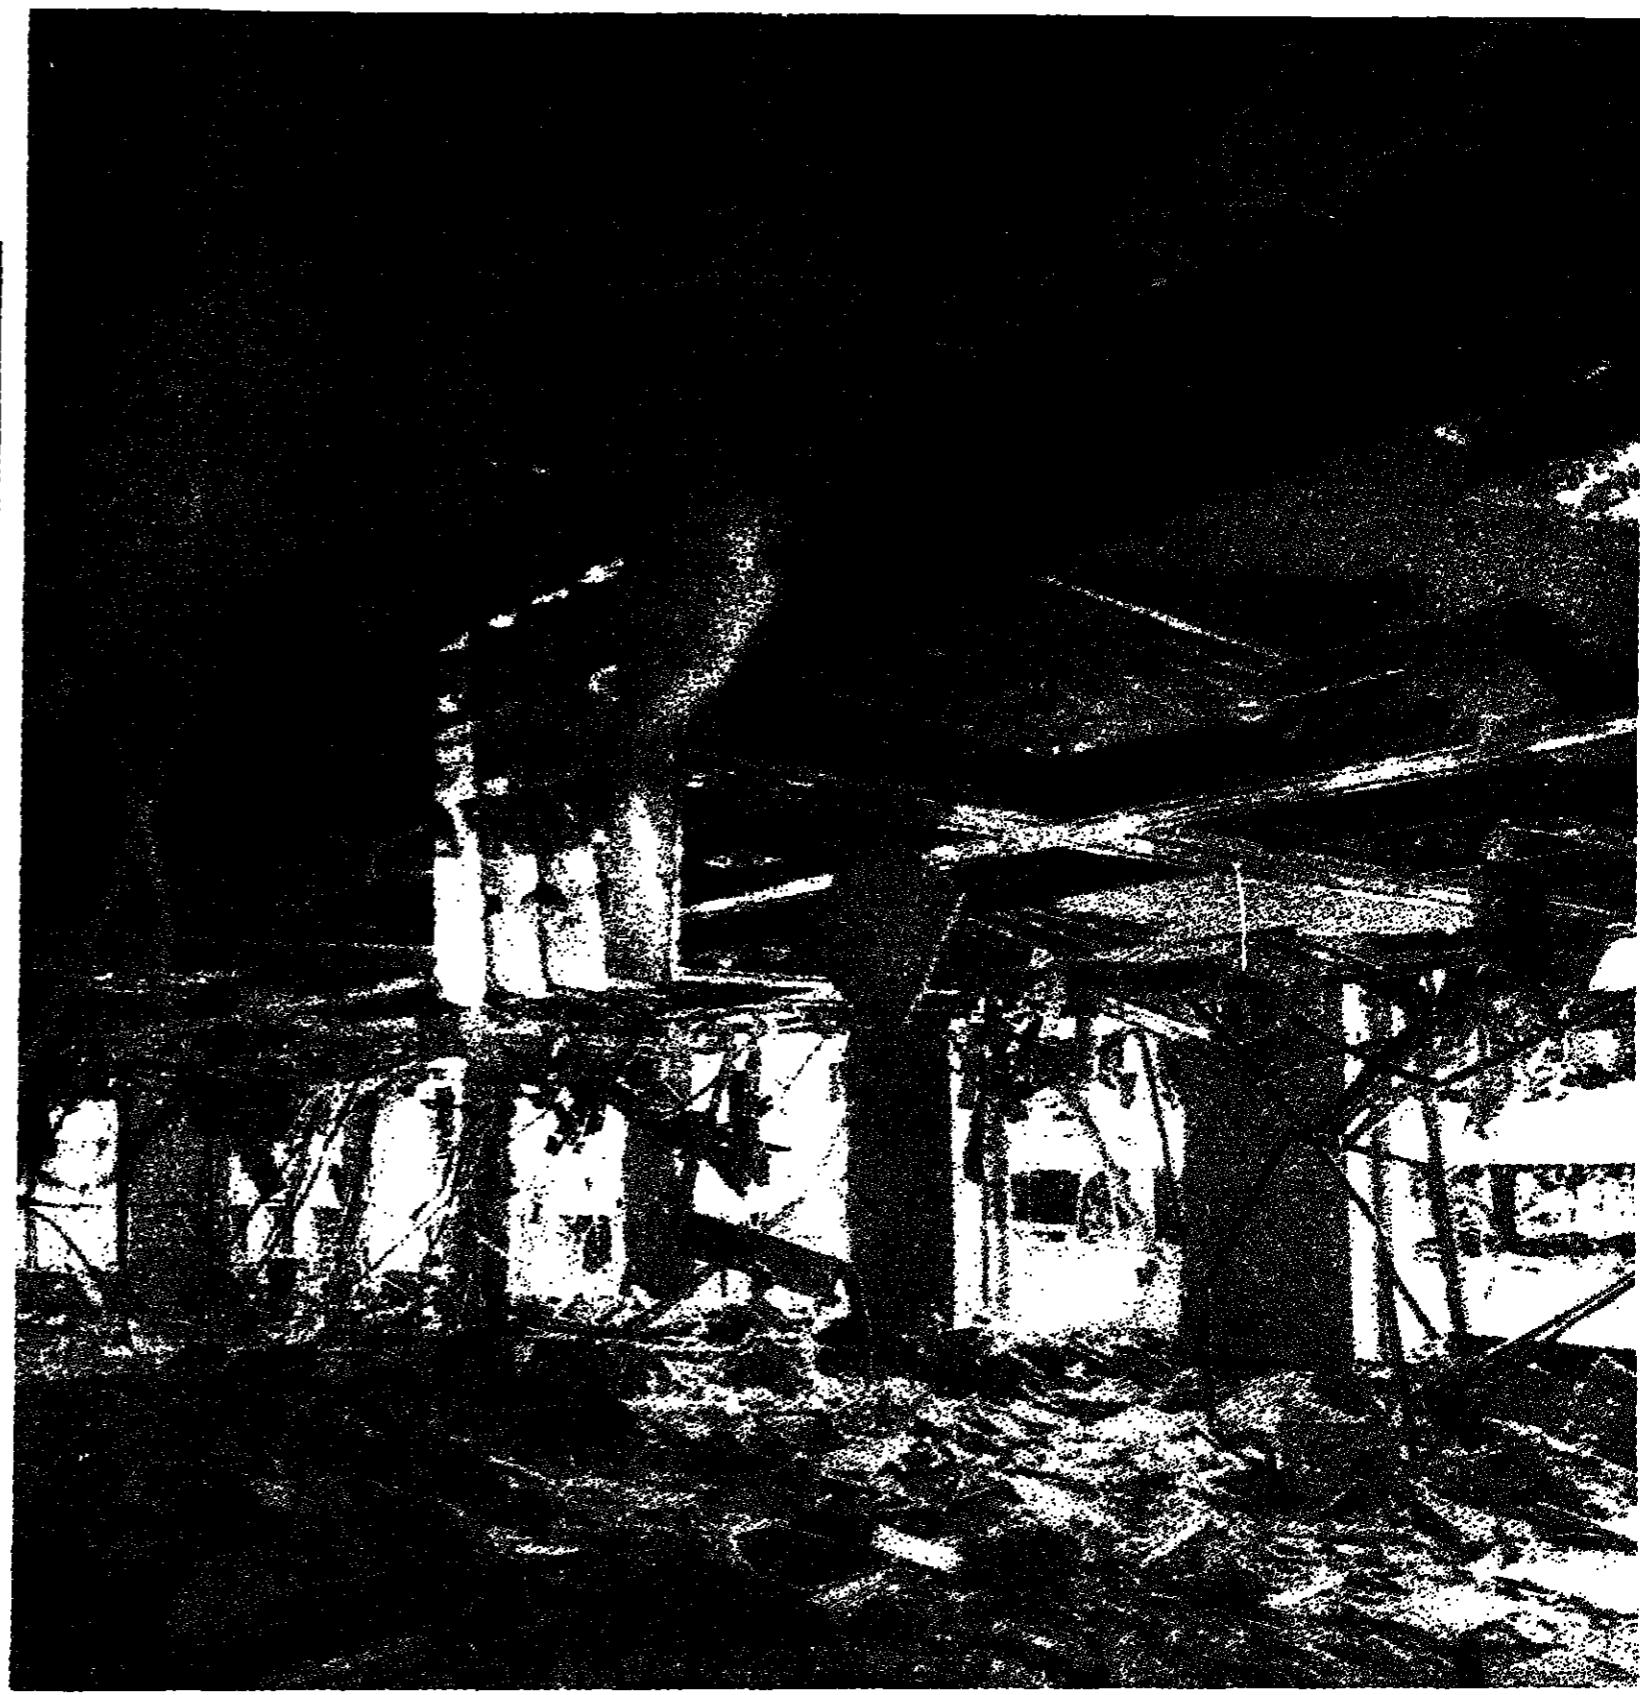

Additional premiums for terrorist cover are collected by insurers and fed into Pool Re. Pool Re meets all claims until its funds - relying on total premiums of between £250m to £300m each year - are used up.

Insurers then contribute an additional tranche of cover equal to 10 per cent of premiums collected by Pool Re. Beyond this level the government meets all claims, acting as a reinsurer of last resort.

The DTI said yesterday the

government would stand by these commitments even though Pool Re has still not been authorised. Funds paid to it are being held by insurers in specially earmarked accounts.

Even under present arrangements cover is expensive, especially for companies in high-risk areas. The owners of a central London office block worth £100m in central London might expect to pay £50,000 for terrorism insurance, according to the ABI.

Devastation: ceilings, partitions and windows inside the Mitsubishi Bank building in Bishopsgate were destroyed by the bomb blast in the City on Saturday morning

Companies begin gruesome calculations

By Richard Gourlay

FOR THE second time in little more than a year the City has reluctantly begun the gruesome calculations of how an IRA bomb will affect the City's oversupplied office space.

Chartered surveyors, agents and property companies were yesterday keenly aware that the City's reputation and attractiveness as an international financial centre has been severely damaged. Already one firm, Wates City, had set up shop within the heart of the Corporation of

London to place tenants in vacant properties.

But just as the shock waves of the Bishopsgate bombing may have spread further this time, so the short term benefit to the property market may be greater than when the IRA bombed St Mary Axe in April last year.

The Royal Institute of Chartered Surveyors estimated yesterday - without the benefit of a tour of the most badly affected area - that tenants occupying 1.1m square feet of office space have been badly affected by the bomb.

By comparison, the St Mary Axe bomb led to 300,000 sq ft of additional property being let after two buildings bore the brunt of the attack, according to the property surveyors, Jones Lang Wootton.

Mr George Grillon, chairman of the Royal Institute of Chartered Surveyors, said yesterday that it was far too early to say how much of the damaged space would be back in service after easy and quick re-glazing efforts by the thousands of glaziers already swarming through the City.

But any increase in demand

would come against a backdrop of chronic oversupply.

Within the boundaries of the City of London there are about 3.5m sq ft of new and unoccupied office premises ready for use and about the same quantity available within older buildings.

Extending the survey area marginally to include a broader definition of the City - taking in post codes EC1 to EC4 - there are 5m sq ft of new office space and another 7.5m in older buildings.

Additional capacity would also come out of mothballs.

should the property market show any sign of firming.

Other considerations suggest the damage to the City's reputation might have a more enduring impact than the increase in demand.

The larger affected companies - such as NatWest and HSBC - have contingency arrangements that mainly involve squeezing into space they already occupy elsewhere in London. Also, lessors have an obligation to return to their original buildings once they are repaired, so any increase in demand would be temporary.

"Our computer data is all safe, but our files are spread around the City. If anyone sees a piece of paper with our logo on, could they kindly pick it up and return it to us?"

Reaction to the bombing

Dunkirk spirit rises at EBRD

Peter Norman, at a seminar in the embattled bank

when the bomb went off, says its morale survived as well as its marble

He doggedly kept up his expose of east Europe's need for tax reforms as announcements urged all to stay at their work stations and away from windows.

The voice in the loudspeaker need not have worried. The bank and its celebrated marble fittings survived virtually unscathed. Although the building had heaved, breaking a few windows in a ground-floor wine bar, there was a notable absence of panic. "We put the blinds down and carried on," an official explained.

The emergency may have gone some way to fostering camaraderie among delegates and easing tensions created by recent disclosures of the bank's alleged high spending.

Yesterday the Dunkirk spirit was again on show as bands of hob-nobbing and networking delegates wove around cordoned-off streets on their way to the EBRD headquarters at One Exchange Square.

For some veteran staffers, it was a matter of *déjà vu*. Last year's big April bomb had gone much closer to the previous EBRD headquarters and caused far more damage to the bank's building.

Lord Mayor in the spotlight

By Andrew Jack

"EXCUSE ME for a minute," said Sir Francis McWilliams, the Lord Mayor of London, breaking off our interview yesterday. "The Japanese Ambassador is on the phone."

It was just one among several dozen calls that he had received, at his office in Ironmonger Lane, in the City, which became centre of operations to help prepare for business again today.

"The Japanese banks are a very important market for us," said Mr Michael Cassidy, chairman of the City corporation's policy committee, during the pause. "We do need to reassure them that we are doing everything we can."

Mr John Major, the prime minister, had called to offer condolences and promise a meeting early next week. Sir Francis had spoken to the US ambassador and put in a call to the Saudi ambassador.

By mid-afternoon he had also talked to "the major ratepayers" and others affected by the bombing or involved in attempting to restore normality, including the heads of the Stock Exchange, Lloyd's, Mitsubishi, Barclays, NatWest, British Rail, London Transport and British Telecom.

"I was bloody angry," said Sir Francis. "It's so pointless. It's not going to change anything or improve things in Belfast. But everybody is coping remarkably well."

The ancient wood-panelled rooms, ornament-covered

mahogany desks and servants in maroon tailcoats carrying trays of tea in silver pots stood in stark contrast to the urgency of the day.

A constant stream of officials from the Corporation of the City of London passed through the office for strategic meetings to help co-ordinate reaction to the blast.

The Commissioner of the City of London police and other uniformed senior officers rushed through at lunchtime. A few minutes later came the City Engineer, with helmet and luminous hazard-jacket, nervously pulling out a comb to smarten up the Mayor's office before the Mayor's office in the weekend school escaped the weekend first floor.

A few hundred yards away, the Corporation of London's headquarters at Guildhall had been besieged since 8am with keyholders wanting passes to allow them and their contractors into the cordoned-off area so they could assess the damage to their buildings.

The central area of damage remained sealed off even to contractors as police forensic experts examined the site of the blast, and engineers inspected buildings for safety.

The City was not slow to capitalise on yesterday's recovery action. It said its swift response showed the effectiveness of the Corporation government, while the action by St Bartholomew's hospital in dealing with casualties added fresh weight to the case against closure.

By Peter John

THE CHURCH that survived the Great Fire of London, the Victorian building boom, the Blitz and the plate glass revolution of the 1980s has been reduced to rubble.

There was, however, an ironic silver lining to its fate - some of its treasures

were moved to St Paul's Cathedral last year after it suffered damage in the Baltic Exchange bomb. Valuables, including a painting from the Bruegel school, escaped the weekend

fire.

St Ethelburga the Virgin on Bishopsgate, parts of which date back to 1400, was the smallest and one of the oldest

churches in the City. Only 30

feet wide and 60 feet long, it was tucked between the two office blocks which bore the brunt of Saturday's explosion.

Its larger sister church and the accompanying rectory were badly scarred by last April's bomb, which wrecked the home of Rev Dick Lucas, rector for 30 years.

Repair work to bomb-damaged St Ethelburga's was just about to begin before Saturday's blast. The church was enjoying a fragile revival after being closed down some years ago. It had been re-dedicated as a Chapel of Ease in March 1992 and after some refurbishment was open for a few days before suffering £75,000 worth of damage in April.

Hopes of a renaissance for

the church were shattered on Saturday when Mr Paul Sutcliffe, the parish clerk and the building's official keyholder, was called to the Guildhall by police. There was very little he could do. The church was at the centre of the central danger zone which is expected to be closed for at least four days. But reports suggested that nothing remained except for one wall. "It's just a crater and a pile of rubble," said Mr Sutherland.

The parish is now reduced to two churches but yesterday parish administrator Ms Elizabeth Ellingworth said: "We are still holding services at St Peter's in Cornhill in spite of the hardship we are determined not to be beaten."

"This is a continuation of the campaign being waged by the IRA. We had hoped after the deaths in Warrington that this had been some sort of turning point, but here we have death again."

As wire service reporters rushed from the room, Ms Ellingworth brushed aside a recorded announcement of a fire in the building as "something that always happens".

The intelligence record in fighting against the IRA remains in deficit, with bomb attacks far outnumbering the number of arrests, let alone convictions.

"Short of turning each building in the City into a concrete bunker at huge cost there is no guarantee this won't happen again," said Mr Wyatt.

But he believes that companies can make themselves, if not totally secure, at least less vulnerable by using a strategy based on the following:

● Restricted access of large vehicles to specific times which can be monitored by the companies concerned and the police.

● The use of mobile screens of lami-

nated fibre glass mat which can quickly cover an office's window in an emergency and reduce injuries from shattering glass.

● The location of computers and other expensive equipment well away from street-facing areas of an office.

However, such measures, combined with increased police resources, presuppose not just a potential increase in costs, but the willingness of everyone in the City to work together.

In the meantime, the IRA will be considering the weekend events as a significant coup, utterly consistent with the terrorist organisation's own policy of forcing Northern Ireland on to the English and international political agenda.

THE second major IRA bomb attack in the heart of the City in just over a year has served as a chilling reminder of the terrorist organisation's capacity to strike and strike again, and the security forces' apparent inability to stop it.

According to security sources, the IRA appears to have exploited a reduction in the frequency of armed spot checks on traffic by the City of London police.

The security forces are understood to have been assuming the next major terrorist attack would be directed at a political figure rather than property.

Professor Paul Wilkinson, an expert on terrorism, estimated yesterday that there were probably now as

many as 40 people actively engaged in IRA terrorism on the mainland.

In a comment echoed by some MPs, Prof Wilkinson described present arrangements for dealing with the IRA as a "recipe for fragmentation" and urged the creation of a "single body" to co-ordinate resources and intelligence.

Since last year MI5 has in theory been in overall charge of intelligence gathering, with the Metropolitan Police's anti-terrorist squad giving it logistical support.

But in practice the mainland anti-terrorist drive has continued to involve any of Britain's 54 regional constabularies, as well as forces on both sides of the Irish border.

The intelligence record in fighting against the IRA remains in deficit, with bomb attacks far outnumbering the number of arrests, let alone convictions.

"Short of turning each building in the City into a concrete bunker at huge cost there is no guarantee this won't happen again," said Mr Wyatt.

Perrier battle ends with something for everyone

Perrier battle ends with something for everyone

Government aims to revive manufacturing base

Heseltine to unveil export led strategy

By Michael Cassell,
Business Correspondent

MR MICHAEL Heseltine, trade and industry secretary, will tomorrow unveil to MPs his plans for putting his department at the forefront of government efforts to help a long-term, export-led recovery in Britain.

Mr Heseltine will spell out a series of initiatives and structural changes within the department of trade and industry (DTI) intended to help revive Britain's manufacturing base and to boost its share of world trade when he addresses the House of Commons trade and industry select committee.

His appearance will follow last week's remarks by Mr John Major, the prime minister, who laid new emphasis on improving UK competitiveness. He said he regarded the manufacturing sector as "the soldier in the front line" of the struggle to win business.

Mr Heseltine, whose reforms in the DTI were sidetracked by his six-month battle over pit closures, will set out the parameters of his proposed partnership with industry.

Last week, Mr Heseltine disclosed his plans to the leaders of business organisations and to the Financial Times. His blueprint for restoring manufacturing to the heart of economic strategy was welcomed by business leaders although they expressed doubts about his ability to deliver.

Mr Howard Davies, director general of the Confederation of British Industry, said Mr Heseltine and the DTI were "clearly moving in the right direction, albeit rather slowly."

Mr Peter Morgan, director-general of the Institute of Directors, welcomed Mr Heseltine's efforts to create a "department for the market" but stressed that said some of the preconditions spelled out for long-term economic strength were well outside the minister's remit.

"What he is trying to do is useful but, although he sees the total picture, he can only influence part of it. We will have to see how successful he

Heseltine: seeking a trade "catalyst for national, self-interest"

is in getting other departments to join in."

Mr Heseltine is calling for a new dialogue with all sectors of British industry and all sizes of business, enlisting their help to draw up a national strategic approach to winning a greater share of world markets.

The trade and industry secretary is emphasising that government's role will be strictly limited. But he wants the DTI,

which is enlisting growing numbers of private sector secondees, to act as "a catalyst for national, self-interest".

He said he wanted to rebuild the DTI's reputation as a department whose knowledge and opinions would be valued by industry. He intended to extend more help to small businesses and to step up the battle to lift unnecessary burdens from the corporate sector.

Balance of trade holds key to UK recovery

PROOF that the DTI's new competitiveness strategy is working will lie in a lasting improvement in Britain's unhealthy balance of trade, writes Michael Cassell.

Boosting exports lies at the centre of any strategy to achieve long-term economic recovery.

The department's responsibilities in encouraging exports - Britain already sells overseas 25 per cent of what it produces - is being given high priority.

There have been a spate of recent initiatives aimed at assisting an export-led revival, including a boost to export insurance cover, lower insurance premiums, DTI-led export campaigns and the reorganisation of the department's Overseas Projects Board, whose remit it is to support the fight for big export projects.

Mr Heseltine is also in the process of finalising a major internal restructuring of DTI export support operations, which currently cost the taxpayer £170m a year - exceeding the bill for trade aid.

In the meantime, the private sector is being called upon to play its part in the shape of so-called export promoters, drawn on secondment from companies and brought in to give the benefit of their experience to others.

Mr Heseltine dismisses the concept of desk-bound government officials imploring companies to "get off your bottoms and go out there". The answer, he says, is to recruit people who have spent their careers selling overseas and who can teach others how to do it.

About 25 full-time promoters have so far been enlisted, initially for one year, and the intention is to get about 100 into the DTI. The department traditionally recruits around one quarter of that number.

Freed from day-to-day line management responsibilities the promoters will liaise with overseas posts and also maintain a dialogue with companies. They will be expected to visit businesses around the country, giving advice on export opportunities.

Portillo sees modest upturn

By Peter Norman,
Economics Editor

BRITAIN is heading for an economic recovery which will be modest compared with the 1980s but which should be "better sustained, for a longer period of time and with greater certainty", Mr Michael Portillo, chief secretary to the Treasury, said yesterday.

A Treasury demand that the review deliver immediate as well as long-term reductions in public spending would increase costs significantly for employers.

The sharp squeeze on government budgets imposed by the government's £1bn-a-week borrowing requirement also threatens the prospect of legislation next year to curb eligibility for invalidity benefit and to shorten the period for which the jobless are entitled to receive unemployment benefit.

After a weekend meeting of social security ministers to discuss the future of the welfare state, officials will today begin drawing up strategies to cap the inexorable rise in the department's £20bn budget.

UK's policy on Norwegian imports. Norway insists it is ready to facilitate the deal and agreed in principle to a UK demand for access to the Norwegian North Sea Norpipe pipeline.

National Westminster Bank, one of Britain's main clearing banks, expects unemployment to rise by another 210,000 and to peak at around 3.15m.

Base rates may also be cut by 0.5 per cent to 5.5 per cent in the summer - but the government will have to backtrack and increase rates to perhaps 7 per cent by next summer, according to Mr David Kern, the bank's chief economist.

Mortgage rates may also have to be increased but the housing market is set for a revival with prices rising by 3 per cent this year and 7 per cent next year, he said.

Companies are still resisting the Accounting Standards Board's campaign to outlaw extraordinary items, according to a survey by Company

was likely that rates of growth "even a few years out" would not be as fast as in the 1980s.

He said recent data on industrial production, retail sales, exports and from the housing market were "very encouraging" while, contrary to expectations, there had been falls in unemployment. The government was confident that it would meet its goal of holding underlying inflation in the 1 to 4 per cent target range this year and next, he added.

In an interview on BBC radio's World This Weekend, Mr Portillo promised the gov-

ernment would adjust its policies to keep inflation under control. Although "there was no immediate prospect" of the UK rejoining the European exchange rate mechanism, the government would take account of the sterling exchange rate in pursuing its goal of low inflation.

Because industry had kept control of wages, unit costs were falling, giving the British economy a lasting efficiency and competitive gain greater than that caused by the fall in the value of sterling since last September, he added.

Warning issued on British Gas break up

By Deborah Hargreaves

THE GOVERNMENT has been warned against breaking up British Gas by the gas consumers' council, the lobby group opposed to moves by Ofgas, the industry regulator, aimed at dividing the group into separate companies.

Mr James Cooper, chairman of the council, said: "No case has yet been made for radical and irreversible restructuring."

In the council's annual report, which is pub-

lished today, Mr Cooper says that any restructuring should show distinct benefits for the consumer. "Competition just for the sake of competition is no reason for change."

Proposals to break up British Gas are being considered by the Monopolies and Mergers Commission which is due to report at the end of July.

The council said that complaints from consumers about British Gas fell by 14 per cent last year to 19.231 - the biggest drop since 1989.

Alistair Darling, Labour's City spokesman.

The legislation, designed to implement a European Community insider dealing directive, as currently drafted, make it an offence not only to deal on the basis of inside information but also to take advantage of such information by disclosing it or by encouraging others to trade.

Pesticide tests condemned

Government tests for pesticide contamination in food have been condemned as unreliable and often inaccurate following tests on deliberately spiked foods performed by commercial laboratories.

The Food Commission said it had obtained Ministry of Agriculture documents which raised "disturbing doubts" about the accuracy of government contamination figures.

The documents showed that the government's Food Science Laboratory sent foods deliberately spiked with pesticides to more than 50 commercial laboratories which it regularly employs to carry out scientific analysis.

In one test, bread was spiked with three pesticides. But only 44 of the 58 laboratories identified all three contaminants.

Britain in brief

Britain and Norway to resume talks

Negotiations between Britain and Norway resume today on the ratification of a Nkr20bn UK gas import deal agreed two years ago amid fears that they may have reached an impasse.

The deal involves National Power, the electricity generator, buying 2.2bn cubic metres of gas over 15 years from the mid-1990s from Gru, Norway's gas negotiating committee.

National Power wants the gas to fuel two power stations to produce 1,300 megawatts. The deal would require an amendment to a treaty to allow new gas to flow through the Frigg pipeline which runs between the Norwegian North Sea Frigg gas field and St. Peter's Field in Aberdeenshire.

The Gru/National Power deal, which must have the backing of both governments, is viewed as a test case for the

Reporting, the monthly monitor of annual accounts.

During the last 12 months, the analysis showed that 39 per cent of a sample of 570 companies were continuing to use extraordinary items. For accounts published in the first quarter of 1993, the proportion was still 32 per cent.

Extraordinary items are income or expenditure outside the normal activities of a company that are not treated as part of earnings on the profit and loss account.

There continued widespread use comes in spite of new standards issued in late 1991 by the Accounting Standards Board, which argued that very few items should be classified in this way.

Labour backs dealing move

The opposition Labour party is to support a campaign for changes to the government's Criminal Justice Bill to ensure that the offence of insider dealing is not too sweepingly defined.

"I have yet to be persuaded it will do any good to create a large class of potential insiders who are doing no more than commentating on and analysing a company's likely results," according to Mr

Companies are still resisting the Accounting Standards Board's campaign to outlaw extraordinary items, according to a survey by Company

APRIL 26 1993
Balance of trade holds key to UK recovery

Aer Lingus have responded to the British Midland challenge by reducing business class fares

TIMES 25.3.93

BA cuts Euro-business fares

DAILY TELEGRAPH 5.4.93

KLM revamps fare structure

TRAVEL TRADE GAZETTE 25.3.93

All that glitters...

Surprise, surprise.

No sooner had British

Midland launched Diamond Euro-Class, the first separate Business Class cabin to offer a genuine choice of fares, than other airlines started jumping on the bandwagon, falling over themselves in their haste to offer price cuts in Business Class.

Exactly like British Midland's. Or rather, not exactly like British Midland's.

Because their reductions are only selective: some fares are reduced on some routes

(usually the ones they share with British Midland) for some of the time.

In contrast, Diamond EuroClass means real choice, and real savings, on all three of our Business Class fares, on all our international routes, all the time.

We think this sort of knee-jerk response to a British Midland initiative demonstrates only too clearly that other airlines have nothing like our genuine commitment to delivering top-class business travel at reasonable cost.

What do you think?

 Diamond EuroClass

From Heathrow	EuroClass Executive Return Saving	EuroClass Executive Return Saving	EuroClass 3 Day Return Saving
AMSTERDAM	£56	£70	£84

MANAGEMENT

When Amstrad, the UK electronics group headed by Alan Sugar, advertised late last year for the appointment of two non-executive directors, Colin St Johnston was entitled to indulge in an ironic smile.

As managing director of Pro Ned, the organisation for the promotion of non-executive directors which coordinated the recruitment, he was witnessing the remarkable alliance of a vocal advocate for reform of corporate governance with a company criticised for its failure to embrace the topic.

A decade after it began producing annual reviews, Pro Ned retains an evangelical slant, calling regularly for an end to the "old boy network" for appointments, and providing booklets and hosting conferences to promote better boardroom practice. But some are now questioning whether it should continue in its current form.

Pro Ned came into being in 1981 with the backing of nine sponsors including the Bank of England, the Confederation of British Industry and the Stock Exchange. Its first typewritten annual review in 1983 may have since been replaced by rather more glossy production techniques. But its objectives have remained almost unchanged.

The first and primary aim was "to create a climate of opinion in which boards perceive that it is in their own interest to put their house in order". That meant promoting independent non-executive directors and encouraging the split of roles between chairman and chief executive.

The second aim was to create a search service to help companies find these directors. In 1983, Pro Ned estimated that just 5 per cent were selected through search firms while three-quarters came through the personal recommendations of the chairman, company directors or senior management.

One senior executive with knowledge of the organisation says: "It worries me that Pro Ned lacks a clarity of purpose and focus and is not as commercial as it might be." He cites the dominance of representatives of associations rather than working business executives on the Pro Ned board.

Peter Waine, joint chief executive of Hanson Green, a search firm for non-executive directors which claims to place nearly half the estimated 600-700 vacancies a year, has "a lot of respect" for Pro Ned. "But I think it has probably lost its purpose as an appointments agency. It should stick to being a professional institute."

Of the 850 people on Pro Ned's register, 60 per cent are 55 or older, and just 10 per cent are women. Many names stay on the register for

After 10 years fighting the old boy network, Pro Ned now faces questions about its own future, says Andrew Jack

Big changes to take on board

years without being selected. Waine says the register is too reactive, and offers candidates "in the twilight of their careers" who are too reliant on non-executive remuneration to act independently.

But St Johnston argues that Pro Ned actively canvasses for new names, and does not "purge" its list too ruthlessly because candidates who have been untouched for years can suddenly be requested. He

stresses that companies hunting for non-executives can consult the register without identifying themselves, and in the knowledge that candidates will be available.

Less controversy surrounds Pro

Ned's primary aim. "The promotion of non-executives was one area in which there was no division between the City and industry," says Jonathan Charkham, adviser to the governors of the Bank of England and Pro Ned's first director in 1981-82.

Sir Adrian Cadbury, Pro Ned's chairman, says: "Pro Ned has established itself as the one really independent source of advice and has become an accepted authority.

Everyone else has an axe to grind.

But we have an enormous job still to do to make directors more independent."

There is little doubt that there has been tremendous change in the last decade. According to figures from Hemmington Scott, the corporate information company, all FTSE-100 companies now have non-executive directors, as do all but 8 per cent of the 1,533 UK-listed companies excluding investment trusts.

Four-fifths have split the roles of chairman and chief executive.

By contrast, a survey by the Bull

ock Committee showed that one quarter of the Times 1,000 companies had no non-executive directors in 1976. Even in 1982, a Bank of England survey showed 20 per cent without any on the board.

How far Pro Ned was responsible for this change is difficult to assess.

Other organisations and some regulato

rs in the UK and overseas have influenced changes in corporate governance.

Charkham cites at least one instance of a Pro Ned-generated idea: that quoted companies should publish details of the backgrounds of non-executive directors in their annual reports. That was taken up by the Stock Exchange, and is now a listing requirement.

A more fundamental question is whether Pro Ned's campaigning zeal has been focused in the right direction. Most evidence on corporate governance is dangerously anecdotal. A recent analysis by Hemmington Scott suggests that there is little correlation between long-term corporate performance and the presence of non-executives or the separation of chairman and chief executives.

Equally, some argue that the organisation has focused on topics on which there is considerable consensus while neglecting more controversial but important issues, such as the scope for two-tier or supervisory boards.

Sir Adrian says: "That is an important question but let's not divert attention from what needs to be done here and now." He admits that there is a tension between the campaigning and the recruitment roles of the organisation, and says he will be drawing up options for his successor before retiring from the board next year.

Alex Renfield
The author is employed at a senior level in an FTSE company.

Are two heads better than one?

Are we in danger of going overboard on corporate governance? No one challenges the concept or the objectives - but who is counting the cost? Ultimately, are shareholders getting added value?

For example, splitting the roles of chairman and chief executive can be expensive, particularly at executive level. Two salaries for what was previously one job is the starting point. And how often is the chief executive reimbursed at a lower level than his predecessor, who had been handling the dual role? Even a part-time chairman will, almost inevitably, bring an additional burden to the payroll.

The hidden costs are more difficult to identify and justify. Decision making with one ultimate arbitrator should be straightforward. A decision with split roles

can be time-consuming but the outcome is unlikely to be materially different or more profound from two minds than from one.

Another issue arises over com

municating with the City, a process that the chairman is duty-bound to lead. Yet it is the chief executive who really knows the business, and it is he who fund managers wish to hear. I suspect that this will not be easy for many chairmen to accept.

Many senior executives are frus

trated with the challenge of working for two masters, particularly if they worked closely with someone combining efficiently the two roles.

If a company has in place a well

qualified, independent set of non-

executive directors, are further

safeguards necessary? If arm's

length committee covering audit,

remuneration and so on are in

place and working efficiently, will

the horrors of the past be repeated?

When too much power lies in one person's grasp, then the likelihood of fraud, dishonesty and variations

on those themes is always a danger.

But executives and companies of the highest integrity will always

outnumber those with the propensity to go off the rails. It should not be necessary, as a matter of course, for every company to split the chairman and chief executive.

In providing such safeguards

companies are often wasting hun

dreds of thousands of pounds.

It is time to think again, to ana

lyse the practical implementations

and to consider carefully whether

we are really creating a better, safer corporate world.

COMPANY NOTICES

NOTICE OF REDEMPTION TO THE HOLDERS OF MAGNA INTERNATIONAL INC. 7% Convertible Subordinated Bonds Due 1993

NOTICE IS HEREBY GIVEN that, pursuant to the provisions of the Trust Deed dated November 26, 1986 between Magna International Inc. (the "Company") and The Canada Trust Company, as trustee, as amended by a Supplemental Trust Deed dated June 1, 1992 between the Company, The Canada Trust Company and National Trust Company, as successor trustee, and by a Supplemental Trust Deed dated October 22, 1990 between the Company and National Trust Company, as trustee (which Trust Deed, as amended, is hereinafter referred to as the "Amended Trust Deed"), the Company has elected to redeem and will redeem on May 26, 1993 (the "Redemption Date") all of its outstanding 7% Convertible Subordinated Bonds Due 1993 (the "Bonds") by paying to the holders thereof of the redemption price of 101% of the principal amount thereof, together with accrued and unpaid interest to the Redemption Date of US\$335.19 per US\$1,000.00 Bond.

Payment of the redemption price (US\$1,035.19 per US\$1,000.00 principal amount, including accrued interest and premium) will be made to holders against presentation and surrender of the Bonds together with all unmatured coupons appertaining thereto and a copy of this notice at The Chase Manhattan Bank, N.A., Woolgate House, Coleman Street, London, EC2P 2H0; Banque Bruxelles Lambert S.A., 24 Avenue Marix, B1050 Brussels; Chase Manhattan Bank, Luxembourg, S.A., 5 Rue Plaetis, L-2338, Luxembourg; or Chase Manhattan Bank, Switzerland, 63 Rue du Rhone, CH 1204 Geneva (collectively, the "Paying and Conversion Agencies").

Holders of Bonds are reminded of the right to convert the bonds into fully paid and non-assessable Class A Subordinate Voting Shares of the Company at the current conversion price of US\$20.75 per share. Such right may be exercised at any time prior to the close of business (London, England time) on May 19, 1993 by surrendering the Bonds, together with all unmatured coupons appertaining thereto, to any of the Paying and Conversion Agencies accompanied by a duly signed and completed conversion notice. Copies of the conversion notice form may be obtained from any of the Paying and Conversion Agencies. Please note that, pursuant to the provisions of the Amended Trust Deed, the conversion right will expire at the close of business (London, England time) on May 19, 1993.

NOTICE IS FURTHER GIVEN that, pursuant to the provisions of the Amended Trust Deed, all interest upon the principal amount of the Bonds shall cease to accrue from and after the Redemption Date and coupons for interest accruing after the Redemption Date shall become and be void.

DATED at Markham, Ontario, Canada this 26th day of April, 1993.

'Flexecs' show their muscle

By Kate Button

Being made redundant is not

such a big deal, according to John Rauwenda, fiscal manager at the Foundation for San Francisco's Architectural Heritage. For him it was a blessing in disguise.

In the UK, executives in the US have recently discovered that redundancy is not a malaise restricted solely to the ranks of the blue-collar worker. But Americans are finding increasingly that being a temporary executive

has its perks.

It is largely for this reason that the incidence of temporary employment rises towards the end of a recession when companies find they have been too eager with the parting knife and need certain skills on board, but cannot afford a permanent executive.

Small companies as well as large have been attracted towards the ever increasing pool of executive expertise on the marketplace. Many have

A Modernist of east and west

Colin Amery on the work of Fumihiko Maki, winner of the Pritzker Prize

He has been described as a "New Modernist"; he is famous for his loud and frequent laughter; his architecture is thought by some to be in the realm of transcendental materialism; and today he joins the small band of architects to win the Pritzker Prize. Fumihiko Maki is an architect who is often seen as bridging the cultures of east and west because he was born in Japan in 1928 and from 1953 has spent a large part of his career in the US.

This coveted prize is often described as the Nobel prize for architecture. It was the brainchild of Jay A. Pritzker, the president of the Hyatt Foundation, and it has been presented annually since 1973. It is generous - \$100,000 - and the presentation ceremonies have been held at important architectural locations all over the world. The jury is international but inevitably there is a strong transatlantic flavour to the award. The list of laureates is interesting: Philip Johnson; Luis Barragan; James Stirling; Kevin Roche; I.M. Pei; Richard Meier; Hans Hollein; Gottfried Boehm; Kenzo Tange; Gordon Bunshaft with Oscar Niemeyer; Frank Gehry; Aldo Rossi; Robert Venturi; and Alvaro Siza. Seven of the winners have been American and many more are prominent in the academic world of architecture which has a strong leaning towards the American schools.

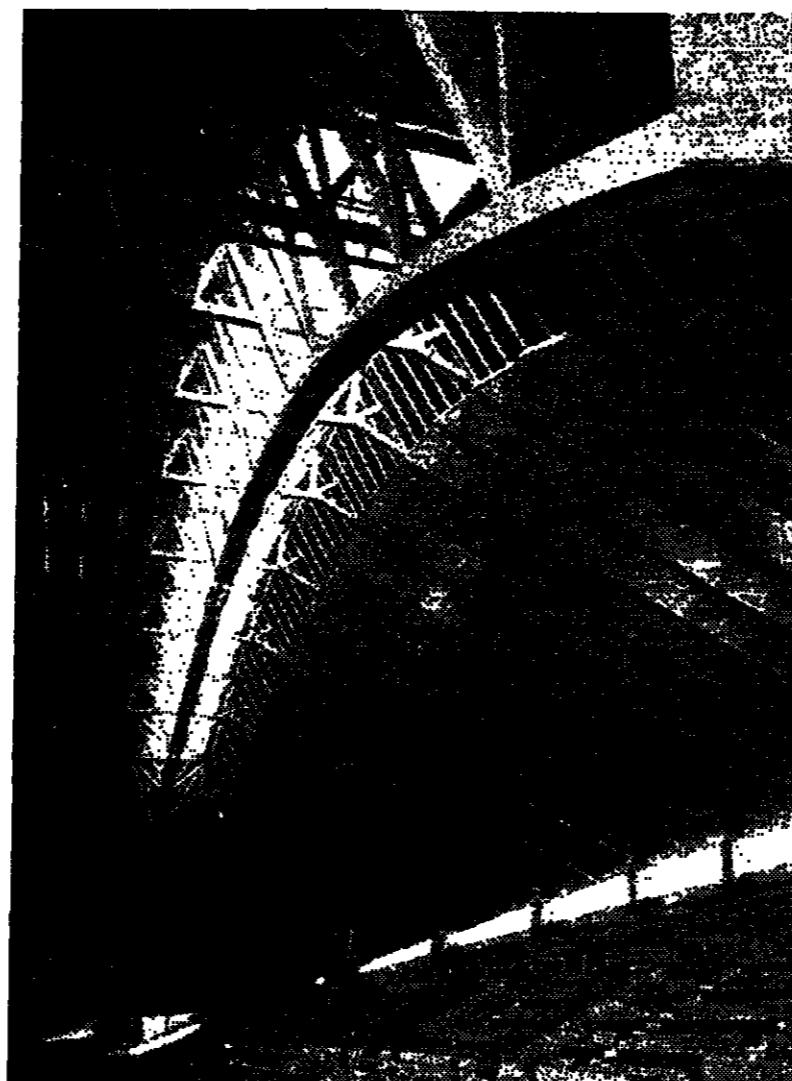

There is, I think, a feeling that the award should mark the whole career of the architect and so it is inevitable that it should have a certain predilection for the masters of the modern movement and their immediate heirs. This year the jury states its view of Maki very clearly: "He is a modernist who has fused the best of both eastern and western cultures to create an architecture representing the age-old qualities of his native country while at the same time juxtaposing contemporary construction methods and materials... Maki has expressed his constant concern for the 'parts' and the 'whole' describing one of his goals as achieving a dynamic equilibrium that includes sometimes conflicting masses, volumes and materials. He uses light in a masterful way making it as tangible a part of his design as

are the walls and roof. In each building, he searches for a way to make transparency, translucency and opacity exist in total harmony. He uses precise detailing to give his structures rhythm and scale."

Maki's buildings are not as well known in Europe as they are on the American/Japanese architectural axis. His major works are all in Japan, although he is now designing major office buildings in Munich and has a number of commissions in the US. He is, curiously, very famous for not winning the competition for the major new Getty museum in Los Angeles: his entry was much favoured by many members of that jury. An important visual arts centre project by Maki is currently under construction, which is literally on top of the Moscone Convention Centre in the Yerba Buena Gardens in San Francisco.

As a student Maki was much influenced by the Bauhaus and after studying at the Harvard School of Design he worked for Skidmore, Owings and Merrill in New York. When he returned to Japan in 1965 he became a founding member of a group that called themselves "The Metabolists". They had a terrifying philosophy of creating the largest possible megastuctures as the solution to urban architectural problems. Their ideas embraced technology and vastness of scale as natural bedfolds and sometimes the results were built in Japan. The great Harumi apartment block designed by Kuroki Mae-kawa is one of largest concrete framed blocks of flats, and it was admired by the Metabolists for the way it fitted hundreds of little traditional Japanese houses into a Corbusian block. Kikutake's Sea City and Tange's plan for a megastucture for the whole of Tokyo Bay were the most extreme examples. Many of the Metabolists' ideas were taken up by mad groups like Archigram in England or Paolo Soleri's collectives in Arizona. Today it all has a sad period feel and Metabolism is rightly seen as a dire example of a modern architectural megalomania.

Maki clearly recovered from this moment of madness and in his famous Hillside Terrace apartments in Tokyo

Fujisawa Municipal Gymnasium, Japan (1984)

he demonstrates successfully the virtues of small-scale town planning. I saw recently his Tokyo Metropolitan Gymnasium, which is a giant of a building but has a strange, anthropomorphic presence that is very powerful. His Spiral Building, which is part of the Waco Arts Centre in Tokyo, has an elegance and an invisible mastery of technology that is masterful. I particularly enjoyed the games he plays with the language of modernism in the Tepia Science Centre in Tokyo full of references to De Stijl and reinterpretations of the dead language of cubism.

The greatest influence on Maki is probably the late work of Eero Saarinen in the US. Both architects have the same fascination with new shapes and a

ARTS

Shakespeare in London

Die lustigen Weiber von Windsor

Sam Wanamaker's grand design of a faithfully reconstructed Globe Theatre close to the original site took another step forward at the weekend with production of *Die lustigen Weiber von Windsor* by the Bremer Shakespeare Company.

The weather on Friday was not kind, but not quite cruel enough to prevent the show going through to the end. If the sun had shone, the superlatives in this piece would be even stronger. For I do not share the general British scepticism that Wanamaker is pursuing a heroic endeavour doomed not to come off. He has been at it now for over 20 years and the arguments for what he is trying to achieve become stronger with time.

In the first place, the international audience for Shakespeare is greater than the British. There are imitation Globe Theatres strewn around the world, though none with the advantage that could accrue to one set in the heart of Shakespeare's London.

The site is on the south bank

of the Thames more or less midway between the Royal National Theatre on the same side of the river and the Royal Shakespeare Company's Barbican home not far across the waterway. All three sites are just about within walking distance of each other, and would be even more comfortable so if Wanamaker's further dream of a pedestrian bridge across the river were realised.

The concentration of three theatres in broadly the same area would add to the attraction, especially to foreign visitors.

The site is on the south bank

of the Thames more or less midway between the Royal National Theatre on the same side of the river and the Royal Shakespeare Company's Barbican home not far across the waterway. All three sites are just about within walking distance of each other, and would be even more comfortable so if Wanamaker's further dream of a pedestrian bridge across the river were realised.

The triumph is Norbert Kentrup's Falstaff. The Germans do these things on the grand scale. No padding is required - we know this because for much of the time he wears a see-through nightshirt: he is just enormous, bigger even than Helmut Kohl, and remarkably good natured to boot. Note his entrance, dripping wet, after the interval, having just been thrown in the river, which in this case is conveniently nearby. Whether you understand German becomes

unimportant.

Die lustigen Weiber (or in other words *The Merry Wives of Windsor*) is a perfect example. Some of the language and contemporary allusions are hard enough to understand in English. But it is a marvellous comedy designed to take liberties with, which perhaps explains why it has been the base for several operas.

The Bremer production looked as if it had added components especially for London. Characters carry their bits and pieces in Harrods bags. A search for a marriage partner is pursued by consulting the (obviously newly introduced) agony column in the Evening Standard. When things go wrong, as in Friday's conditions frequently they did, the characters address the audience in the heart of Shakespeare's London.

There is a cast of only five - true to the Shakespeare tradition, all men. One of the revelations is that it is the arms rather than the legs that tell the men from the women. Erik Rosander is a splendid Anne

Page, almost better when just gesturing than when speaking.

The triumph is Norbert Kentrup's Falstaff. The Germans do these things on the grand scale. Germany in need of new policy mix

Western Germany is in recession. Real gross domestic product is now expected to fall in 1993 by between 1.5 and 2 percent. Unemployment

will rise, and a turning point may be reached only in the first half of 1994, provided expectations of a sustained economic recovery in the US and a rapid expansion of world trade materialise. The western German economy, to be sure, will not play the role of a locomotive for the rest of European Community in the near future. The hope is that the recession does not become stronger than is now foreseen, otherwise eastern Germany would be adversely affected.

To many, it appears that a quick recovery is impeded by the Bundesbank's high interest rates which have strangled the other EC economies and thus have hampered German exports. But the Bundesbank is not the problem; the real difficulties lie elsewhere.

The biggest problem is fiscal policy. The fiscal deficit has been rising significantly since unification. In 1992, it amounted to 4 per cent of GDP; if off-budget liabilities are included, the deficit was 7 per cent. Public financial transfers to eastern Germany (about DM150bn (£60.9bn) in 1992, equal to 5.5 per cent of west German GDP) will remain high for years to come. Such financial imbalances are not sustainable over the medium term. Hence, strict budget consolidation, with a cumulative four-year cut to bring the structural deficit down to 2 per cent of GDP, is necessary.

Whether or not the "solidarity pact" which political leaders agreed in mid-March puts fiscal policy back on a sound financial path remains to be seen. On the positive side, it is important that decisions on financial transfers to the east and the burden-sharing in the west have finally been taken. However, the chosen approach gives cause for concern.

Priority is being given to sharp tax increases rather than substantial spending cuts. Direct taxes, rather than the

ary policy at risk.

It should also be recalled that expansionary monetary policies have not proved to be particularly successful in the past in overcoming recessions, above all when deep structural adjustments are necessary. A continued cautious easing of monetary policy would lead to a full normalisation of the yield curve later this year.

Germany needs a two-track strategy: consolidation on the budget side and a medium-term supply-side policy to enable potential output to grow at a reasonable rate. This includes trade liberalisation, deregulation and privatisation, as well as reform of the tax system, to make it more conducive to private investment in the context of high international capital mobility. Germany also needs to overhaul its social welfare system, to reduce costs and strengthen economic incentives.

There is little, if any, co-ordination between these policies and short-term macroeconomic policies. Some measures are under way, but the government's preferred piecemeal actions are resisted by well-organised interest groups. The recent decision to protect, via subsidisation, so-called "core industries" in eastern Germany is counter-productive and will be ineffectual.

The planned tax reductions, both on corporate profits and on earnings from doing business, will be combined with a narrowing of depreciation allowances. Such tax reform, if enacted, would therefore have only a minor impact on investment. Moreover, income tax increases agreed as part of the solidarity pact will transform Germany into a truly high-taxation country.

On trade policy, Germany still has to persuade its EC partners and the European Commission that the successful completion of the Uruguay Round is critical, especially in the short run, to restore business confidence about future economic developments.

Juergen B Donges

The author is professor of economics at Cologne University and a member of Bonn's council of independent economic advisers

At the City of London headquarters of the Monopolies and Mergers Commission, a handful of experts is hard at work disentangling one of the most complicated issues in UK competition policy - what to do about British Gas.

The deliberations are being followed closely - not only by the monopoly gas supplier, but by potential rivals in the industry and the rest of Britain's privatised utilities. The MMC report is expected to set a marker for the development of competition in industries privatised during the 1980s and will determine in which areas, and to what extent, the gas market is opened to new entrants.

The commission's discussions will focus on an ambitious blueprint for a fully competitive gas market. The plan, drawn up by Sir James McKinnon, director-general of the regulatory body Ofgas, calls for the division of the company into 12 regional businesses, a separate gas-purchasing arm and a pipelines company. So complex are the issues that the commission has postponed its report, due at the end of this month, until the end of July.

Sir James' ideas are radical. His plan is to break up the monopoly structure forced on the industry six years ago when British Gas was privatised as a single entity. The company's dominant position in the market has obstructed the development of competition, Sir James believes. Rivals now supply about 30 per cent of industrial sales, but Sir James would like to see competition extended beyond the industrial sector.

Ofgas also wants competitors to move into the household supply market - where British Gas holds a monopoly. This is the only way to offer consumers real choice and lower prices, Sir James claims.

Ranged against him are British Gas, many of the North Sea oil operators and the Gas Consumers Council, which represents household customers. British Gas says prices will rise in a more open market. Large industrial users fear they will lose their access to cheap supplies of gas - which are currently subsidised by household customers - if more competition is introduced.

British Gas desperately wants to retain its monopoly over household supply. It has proposed decentralising its own operations in an effort to fend off calls for a wholesale break-up. It has suggested to the commission that it split its

business into five wholly owned subsidiaries covering sales of gas to the industrial market, household supply, pipelines, sales of appliances, and installation and servicing. The company has also offered to disband its central purchasing arm as a way of diminishing its buying power in the North Sea.

British Gas receives some support from North Sea oil companies. Producers such as Shell point to the need for long-term supply contracts to assist the development of gas fields - these may not be available without British Gas's strong buying power.

Shell argues that the current industry structure has served customers well in many respects. Consumer groups agree with this prognosis. The Gas Consumers' Council is sceptical about the benefits accruing to domestic consumers in a liberalised market.

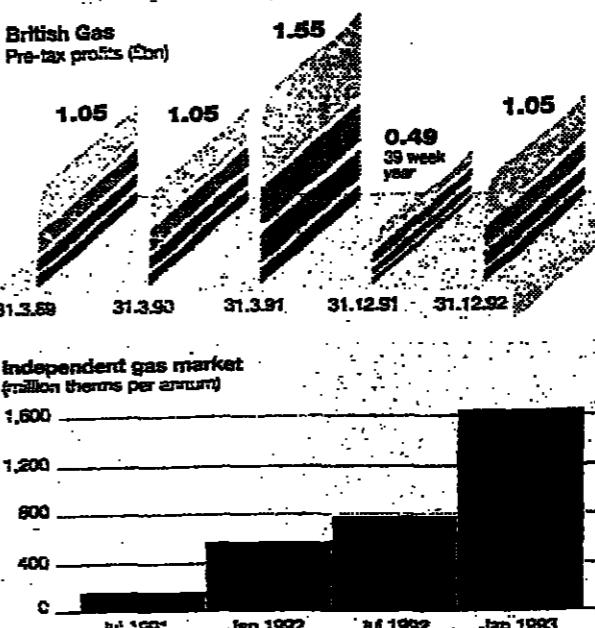

The commission's first challenge is to weigh these arguments and decide whether British Gas's monopolistic power has worked against consumers' interests. If it concludes that the household supply market should be opened up to rivals, it must then decide how this could be done and, if necessary, suggest relevant structural changes. But the commission can only recommend action - the government does not have to follow its advice.

The government has indicated that it would look favourably on a gradual opening of the gas market. Last year, Mr Tim Eggar, energy minister, said he would consider the introduction of competition in household supply in May this year. But the government's plans were thrown into disarray by the monopolies reference last August.

Rival gas shippers are nonetheless convinced that pressures for liberalising the market will be difficult to resist. British Gas has about 25 main competitors in the industrial market and almost all of them have told the commission they are keen to become involved in sales to households.

Though they differ over how quickly and in what way they

British Gas: awaiting a verdict

should be given access to those customers, the competitors to British Gas do agree that they could offer customers cost savings. Alliance Gas, a joint venture between British Petroleum and Norway's Statoil and Norsk Hydro, reckons that

households could save an average £50 a year or 10 per cent of their gas bills if it were allowed to supply them.

The company is basing its claims on evidence drawn from sales to the industrial sector, where it currently supplies 6,000 sites. British Gas buys its gas at about 25p a therm and sells it to households at close to 50p a therm, a substantial profit margin which competitors believe they could erode. But the mark-up is not pure profit, counters British Gas. Transportation costs must be added to the cost of the gas, and these are higher for some customers than others. For this reason, the company says 12m of its 18m customers could end up paying more in a liberalised market - and only 6m would make a saving.

British Gas believes there would be a political outcry if customers in those parts of the country which are the greatest

distance from the gas terminals end up paying substantially higher costs than others. In addition, the company has argued that the flow of gas through its pipelines would be difficult to balance - ensuring that customers get enough gas on cold days - with no single company to monitor supply and demand.

This view is echoed by some industry experts. "If anything goes wrong in the system, there will be all sorts of recriminations, with shippers blaming the pipeline company and vice versa. In the meantime, the consumer is going without gas," said Mr Jonathan Stern, an industry consultant with the Gas Strategies group.

Competitors say these drawbacks are not insurmountable, saying they could provide financial bonds with the regulator so that the pipeline company could draw on the money if rivals fail to meet their supply obligations. "No one worries about the security of supply of, say, milk," said one

rival.

The Gas Consumers' Council, however, says it is not convinced that competition would

bring more benefits to consumers than are currently available from the heavily regulated monopoly. Mr James Cooper, chairman of the council, is also doubtful about whether effective competition is possible in the household market. He believes it is not practical to have several companies competing for customers in a small area because of the huge infrastructure required to service those customers.

Large industrial users are similarly sceptical about the benefits of increased competition. They fear losing supplies of cheap gas in the so-called interruptible market. Interruptible users pay very low prices for their gas in return for being cut off during periods of peak demand - on the coldest days in winter - when their supply is redirected to households. "We're getting ready to fight very, very hard to preserve the interruptible market," said Mr Anthony Mitchell-Harris, who represents large gas users in the Major Energy Users Council, a lobby group.

If competitors were to supply the interruptible customers - and so far none do because prices are too low - those large users fear prices would rise. The rival suppliers would not have British Gas's economies of scale or the same need to balance demand in the domestic market. In addition, if competitors were promising savings to domestic customers, they would not be able to subsidise industrial users.

British Gas is trying to allay such fears by suggesting the creation of a market in peak gas sales to cover supply in this sector of the market. Initially, it says, competing suppliers could bid for industrial contracts, with the sale going to the lowest bidder. Eventually, a so-called spot market could evolve, where gas is bought and sold like any other commodity. The company is planning to consult its rivals on how this market might work.

British Gas will be hoping that such proposals will preempt the imposition of more radical reform. It might draw some comfort from the government's concern to avoid another damaging energy dispute after its controversial coal decisions. Mr Michael Heseltine, the trade and industry secretary, will be aware that he is bound to make enemies whichever way he decides. He is likely to hope that the experts remain embroiled in the complexities of the sector for as long as possible.

Deborah Hargreaves examines the case for a radical restructuring of British Gas

Monopoly under the microscope

business into five wholly owned subsidiaries covering

sales of gas to the industrial market, household supply, pipelines, sales of appliances, and installation and servicing. The company has also offered to disband its central purchasing arm as a way of diminishing its buying power in the North Sea.

British Gas receives some support from North Sea oil companies. Producers such as Shell point to the need for long-term supply contracts to assist the development of gas fields - these may not be available without British Gas's strong buying power.

Shell argues that the current industry structure has served customers well in many respects. Consumer groups agree with this prognosis. The Gas Consumers' Council is sceptical about the benefits accruing to domestic consumers in a liberalised market.

The commission's first challenge is to weigh these arguments and decide whether British Gas's monopolistic power has worked against consumers' interests. If it concludes that the household supply market should be opened up to rivals, it must then decide how this could be done and, if necessary, suggest relevant structural changes. But the commission can only recommend action - the government does not have to follow its advice.

The government has indicated that it would look favourably on a gradual opening of the gas market. Last year, Mr Tim Eggar, energy minister, said he would consider the introduction of competition in household supply in May this year. But the government's plans were thrown into disarray by the monopolies reference last August.

Rival gas shippers are nonetheless convinced that pressures for liberalising the market will be difficult to resist. British Gas has about 25 main competitors in the industrial market and almost all of them have told the commission they are keen to become involved in sales to households.

Survival jeopardised by steel price rise

From Mr T F Barnes

Sir, What business in today's marketplace can increase its prices by more than 40 per cent? Answer: the European steel industry.

We are a fairly typical engineering company supplying fabricated and machined products to a variety of markets from defence to leisure. We have survived the recession to date by prudent management and a shift in emphasis to exports and new products. We employ 50 people. All this

could be in vain now that the steel industry is implementing a 40 per cent-plus increase in its prices.

Our markets are extremely fragile - and our best customers refuse to accept any price increases. So we are faced with a huge, totally unrealistic increase which, because of our purchasing power (5 tonnes a month), we can do little to resist and our large customers refuse to accept.

We have made inquiries in countries outside the EC to see if we can purchase two or three months' supply from producers there. Consistently we are told that they cannot supply or must be careful on price because EC mills may cause problems for them. So much for a free market.

This increase - reasons for which include huge demands from China and capacity reduction - is nothing more than the result of deliberations of a price cartel taking no notice of the realities of the European market. Almost certainly

prices paid by China will be extremely low and we are being asked to support the steel mill margins. Apart from being inflationary it hits the medium and small-sized user, the bedrock of UK manufacturing industry.

Are we to support China at the expense of the UK?

Future of the Travelcard

From Mr Maxwell Blake

Sir, Why is it that the deregulation of London buses should be paid for by their riders ("Travelcard doomed", April 22)? I use my Travelcard to go by bus where I cannot easily travel by the Underground. Is the Travelcard underpriced? Its "critics" appear to forget that London Transport gets its annual fare uplift would that all customers are so willing.

Can it really be beyond the wit of 40 or so bus operators (about one bus load, incidentally) to draw up a revenue-sharing agreement? It would be more equitable to use the smart-card technology to record individual journeys at the point of sale - that is, the bus - and use that data to apportion the pooled revenue. That at least might encourage some competition between the operators.

Maxwell Blake,
McCowan Blake,
119 Bishopsgate,
London EC2M 3TE

No remuneration hike at Premier

From Mr C Jamieson

Sir, Lucy Kellaway's article ("Facts show fat cats are fatter", April 20) and the letter from Mr Donald Butcher, of the UK Shareholders' Association (April 22), both suffer from a failure to check facts, and from the tendency for an untruth, once written, to be accepted as fact.

The supposed 50 per cent hike in management remuneration in Premier's 1992 accounts stems from an elementary failure to notice that the comparative period is one of only nine months. When the

comparative figure is grossed up to the 12-month period, the increase is 12 per cent. However, this is not due to directors being awarded 12 per cent increases, but that an additional executive director joined Premier in June 1992 and in the previous year another new executive director did not join until September 1991.

The real increase for executive directors for that year and for 1993 was basically in line with inflation - that is, no increase. In 1993, following retirement of two senior executive directors in June and

Bar on age discrimination unlikely in EC

From Mr Bryan Cassidy MEP

Sir, Joe Rogaly's suggestion that we should be thinking of raising rather than lowering the pension age ("Age of the old buffer", April 20) has an attractive logic given the recent Carnegie inquiry projections of 31 per cent of the UK population in the age group 50-74 by 2021, compared with 24

per cent now. But what are we going to do to enable older people to work more years if they wish to? (Mr Rogaly quotes statistics which show a declining percentage of men aged over 55 as being "economically active".)

One way would be for the EC to follow the US and bar age discrimination in employment

Longstanding plea for European technological strategy

From Prof Ian Mackintosh

Sir, Professor Hollerman (Letters, April 22) suggests that, in my plea (Letters, April 15) for a much-increased emphasis on technology in industrial and economic planning, I "could make a stronger case". But I already have.

In my 1986 book *Sunrise Europe* (now regrettably out of print), I believe I gave a convincing description of how the European electronics industry got into its mess (now even messier) vis-à-vis the

Americans and Japanese. And this was followed by an even more convincing prescription of how to get out of it through the increased demand for information technology products and services which would have been created by my proposed pan-European fibre-optic network, EuropeGrid.

But, as usual, the cry of the technologists was of little avail. Apart from the laboured efforts of the European Commission in setting up the Race (Research on Advanced Com-

munications in Europe) project, there is little sign of my mooted broadband connections to every European home, office, hospital and school etc. Meanwhile, President Clinton is energetically doing just that by actively supporting the US infrastructure investment in "information highways" - or the "USA-grid".

The point, then, is that whereas the views of technologists are important in the formulation of corporate and governmental policies in America, Japan and elsewhere in Asia, this is certainly not the case in the UK or many other European countries. Until we can match their understanding of the salience of technical matters, both in production and use of technological goodies, we shall continue to suffer substantially lower economic growth rates than our transoceanic competitors.

The bombing of the City

LONDONERS picking their way back to work today through a litter of broken glass should spare a moment's thought for the cities of Northern Ireland, devastated over the past quarter-century on a scale that defies comparison with Saturday's damage in the City.

If the Northern Ireland policy supported by all Britain's political parties is correct, it would be quite wrong to waver in it now merely because the buildings being damaged are in Belfast.

In discovering the vulnerability of London's financial district to large, primitive bombs, the IRA has put its hands on a fresh, powerful weapon. That does not of itself change the nature of the political problem - it merely adds to its urgency.

These are the issues of principle. But many people, in the City and elsewhere, will find one practical issue more pressing. How great a threat do two huge explosions in a year pose to London's position as a financial centre?

The initial responses of some of the companies most affected by the two giant bomb attacks are reported elsewhere in this issue. On this sort of occasion, however, second thoughts are the ones that count. They will be influenced by a number of factors. First will be the adequacy of the insurance arrangements, underpinned by government guarantee, which were set in place after last year's explosion.

The scheme is in its infancy, its enabling legislation has yet to pass through parliament. The government would be right to avoid legalism in its approach to this issue. The important thing is to make sure that the scheme works, and that the state provides the backing necessary for it to do so.

Escape route

A second factor is the way in which changing modern business practices reduce the impact of this sort of disaster. These days, a large business has its files, its intellectual capital, its soul, stored in its computers.

That sounds like an added risk, but in fact it is an escape-route. Providing the computer operators have been taking routine security measures - backing up the files daily, storing copies safely off-site,

Mr Heseltine's magic lantern

MR MICHAEL Heseltine is enjoying himself again. After hard labour in the House of Commons over the future of British Coal, the trade and industry secretary is again doing what he does best - reorganising a Whitehall department and selling a line in policy.

The central themes of the slide show he premiered to the Financial Times and a group of industry leaders last week are incontestable. British industry is inadequately competitive and the rambling government department which oversees it is unfocused and ineffective.

Mr Heseltine has a good track record in Whitehall management. At both the Department of Environment and the Ministry of Defence, he improved motivation and efficiency. At the Department of Trade and Industry, he will use similar techniques, overhauling structures and accountancy procedures and drawing in private-sector managers to sharpen up performance. "Partnership" has long been a Heseltine watchword, and it is still very much in vogue.

A key aim is to improve communication within the department and between officials and industry, so that the DTI knows what it is talking about. There will once more be teams of officials to analyse the competitiveness of 15 sectors of British industry, data base will speak into data base in government research establishments; a "domesday book" of regulations will be heavily edited; there will be "one-stop shops" around the country to facilitate the transmission of advice and information to business. Mr Heseltine will proclaim these plans with a promoter's flair. Hezza is backing British industry, in export markets and in the cabinet.

Good deeds

It will be some time before the effectiveness of these changes can be judged, but they will certainly be welcome to British industrialists. The question is whether Mr Heseltine, in his 1990s manifesto, will stop short of the market-distorting and economically damaging forms of dirigisme with which he flirted in the 1980s.

To judge by deeds rather than words, his record in the last year has been good. He has fought for the right policy on coal, at some

and so on - the entire system can be rapidly re-created elsewhere.

The third factor is less encouraging. The risk is that the bombing will be one more reason to view London as different, risky, a place at the margin, subject to its own unpredictable influences.

There are enough of such forces already at work: the EMS debacle, the Taurus collapse, the City's well-known transport problems, the local authority swaps fiasco - even the perennial nuisance of passing through immigration controls at Heathrow.

City's advantages

Until now, these have been far outweighed by London's countervailing advantages: an open, innovative atmosphere, skilled labour and support services, welcoming authorities, and a cosmopolitan financial tradition. Two bombs are unlikely to tilt the balance. But it is the future risks that matter, and even with extra security precautions, they will clearly be much greater than they seemed 13 months ago.

Britain's big financial houses are tied to London; so are the handful of leading international ones. It is the smaller, more footloose institutions - the ones that give the London markets their unique breadth and depth - which can choose to vote with their feet. Ensuring that their decisions come down in London's favour will require tighter security precautions, keener intelligence and better use of police resources. But as important will be a renewed determination to focus on the other aspects of the City's competitiveness.

The speed with which the City has coped with the two big disasters of the past year is a tribute to the professionalism of its support staff and the flexibility and commitment of its workforce. Those are among the reasons why London has remained the leading international financial centre. Its chances of retaining that title were high before Saturday's bomb. They remain high now - as long as the government, the City authorities and the leading financial houses display a commitment not just to London's physical security, but also to its future competitive advantage.

That sounds like an added risk, but in fact it is an escape-route. Providing the computer operators have been taking routine security measures - backing up the files daily, storing copies safely off-site,

personal political risk. He has resisted the temptation for quick, taxpayer-funded fixes at Leyland Daf.

More doubtfully, his strengthened financial support for exporters could result in subsidies for poor business deals, even if the measures are not lavish by international standards. Government selection of "national champions", even in the limited context of bids for export contracts, is a tricky game.

Competition policy

But the biggest question marks over Mr Heseltine's tenure at the DTI concern competition policy and Europe.

On the former, he insists that there is no change in the Taffet-Lilley doctrine, to confine competition policy judgments to questions of competition. But doubts have been raised in practice by his decision to overrule the Office of Fair Trading in a couple of recent cases. Since Mr Heseltine shares the view of his predecessors that no public explanation should be given for these decisions, there is a danger that policy will become opaque and arbitrary. With crucial judgments ahead on British Gas and other privatised utilities, this is worrying.

More important still, if Mr Heseltine fosters an illiberal culture of shady ministerial establishment in his own department, it will be reflected damagingly in the councils of the European Community, where DTI ministers play a large role on everything from energy to trade.

Mr Heseltine's instincts will certainly be to join the political fray on questions such as the future of Airbus and its potential collaboration with Boeing on a super-jumbo project. He looks back with pride at his role in creating the European Space Agency.

On some such matters, ministers have a necessary role, but there is a risk that Britain is lured towards the unrewarding and outdated game of picking industrial and technological Euro-winners.

More broadly, Britain could blunt its influence as an economic liberaliser, in matters of trade, industry and energy. If he can avoid these pitfalls, Mr Heseltine will show that he is the right man in the right job at the right time.

The biggest challenge for economists today is understanding the extraordinary success of east Asia. The region has nearly quadrupled per capita incomes in the past quarter of a century - a record unparalleled in economic history. On present trends it may begin to overtake much of the industrialised west early in the 21st century.

If its startling success could be replicated elsewhere, billions of people in developing and formerly communist countries could look forward to improved living standards. And the hope, eventually, of eliminating the scourge of grinding poverty would seem less quixotic.

Yet the region is as puzzling as three-dimensional chess. It has done far better than conventional theories predict, even allowing for such quantifiable pluses as macroeconomic stability, high rates of investment and a focus on exports. There is just no generally accepted explanation for its main distinguishing feature - supercharged rates of productivity growth (see chart).

The puzzle is deepened by the region's lack of homogeneity. The high-fliers are far from being carbon copies. At one extreme, Hong Kong has pursued a broadly free market approach; at the other, South Korea has intervened in just about every way conceivable. And the magic formula for growth has entirely eluded some countries in the region, such as the Philippines.

At the World Bank in Washington, an exhaustive analysis of the "Asia miracle" is nearing completion. Bank staff are distilling lessons from Japan, the four "tigers" - South Korea, Taiwan, Hong Kong and Singapore - and the so-called "cubs" - Malaysia, Thailand and Indonesia. They have also taken a look at the recent explosive growth in parts of southern China.

The study was undertaken partly at the instigation of Japan, the bank's second-largest shareholder, which has long wanted to play a bigger role in policy design. Japan has been critical of aspects of conventional World Bank/International Monetary Fund prescriptions and, justifiably, believes more attention should be paid to its own outstandingly successful development strategies - which formed a model for much of east Asia.

In 1991, Japan's Overseas Economic Co-operation Fund told the bank it was putting too much emphasis on deregulation and privatisation and made a case for selective import protection in developing countries and for the use of subsidised credits as a tool in industrial policy.

Mr John Page, a senior member of the bank's Asia miracle team, says the Japanese criticism struck a chord because the results of market-oriented reform had often proved disappointing in developing economies. By cutting budget deficits, eliminating market distortions and shrinking government, client countries had stabilised their economies. But too often they had not achieved a virtuous cycle of rapid growth; they still lay "at the bottom of the league table relative to east Asia".

The question became: "What now?" The bank's benchmark for judging Asian policies is not an extreme free market philosophy, which would have the public sector share responsibility for just about everything bar national defence. It is rather the less controversial "market friendly" strategy set out at length in the bank's 1991 World Development Report.

This clearly delineates the role of markets and the state. Development would be fastest, it claimed, when government concentrated on two jobs: maintaining macroeconomic stability through conservative fiscal and monetary policies; and investing in people through public education, training and healthcare programmes.

Beyond this, developing countries should rely on market forces. They should create as competitive as possible a regime in industry, commerce and the financial sector. And they should eliminate all barriers to trade and foreign investment. The core idea is that governments

personal political risk. He has resisted the temptation for quick, taxpayer-funded fixes at Leyland Daf.

More doubtfully, his strengthened financial support for exporters could result in subsidies for poor business deals, even if the measures are not lavish by international standards. Packer and Murdoch in satellite bid

Telecom Australia, the government-owned telecommunications carrier, has joined forces with News Corporation, Mr Rupert Murdoch's US-based media group, and Mr Kerr Packer's Channel Nine television network to bid for Australia's first satellite television licence. If the bid is successful it would establish Mr Packer as the dominant force in Australian commercial broadcasting. Page 19

European Monetary System

The European exchange rate mechanism's grid underwent a change last Friday, when the peseta fell victim to another strong speculative attack. The Spanish currency is now bottom of the ERM grid, some 4% a percentage point below the next weakest currency, the French franc. Although the peseta fell through its central rate against the D-Mark on Friday, it is still some way above its ERM floor. But the scale of intervention by the Bank of Spain and successive rises in interest rates have provided only a limited support to the currency. Peseta remains vulnerable, Page 31 Currencies, Page 31

EMS: Grid

The chart shows the member currencies of the exchange rate mechanism measured against the weakest currency in the EMS's narrow 2.25 per cent fluctuation band. In practice, currencies in the narrow band can rise more than 2.25 per cent from the weakest currency in that part of the system. The Spanish peseta and Portuguese escudo operate with 6 per cent fluctuation bands.

Prospective p/e ratio

The latest prospective p/e ratio for the "500" index for calendar 1993 is 14.3, according to IBES, the consensus estimates service (last week: 14.3). This compares with an IBES estimated p/e for the "500" of 18.4 (18.9) for calendar 1992. The official FT calculation of the historic p/e, based on the latest reported earnings, is 17.87 (17.78).

THE environment is a bit like Lewis Carroll's Cheshire cat where economic policy-making is concerned.

Environmental arguments loom as large as life if they can be used to bolster the case for unpopular measures. At other times, however, the environmental cause fades even when it may be vitally important to the future physical and economic welfare of the nation concerned.

Take two recent examples. In his March Budget, Britain's chancellor Mr Norman Lamont cited last year's agreement in Rio de Janeiro on a new UN convention on climate change as the reason for imposing a value added tax on domestic fuel and power from 1994 and for UK government plans to increase road fuel duties by an average 3 per cent a year in real terms in future Budgets.

Less than a month later, Mr Lamont was in Tokyo at the Group of Seven finance and foreign ministers' meeting to decide western help for Russia. Although Mr Lamont's Budget speech had referred to the possible need for further co-ordinated international action on global warming, he and his G7 colleagues failed to consider any such plan when working out how best to help Russia.

Admittedly, Russia's problems of stumping output, incipient hyperinflation and policy gridlock were and are pressing. Moreover, the perceived need of the West to provide speedy support for President Boris Yeltsin probably precluded an elaborate link between western support for economic reform and action to clean up Russia's environment.

But Mr Lamont's Budget speech referred to the Rio convention on climate change as a "milestone in international efforts to halt global warming". If it is that important, it clearly merited being taken into account in the discussions over Russia's economic policy.

The reason why is spelt out

A cool look at the costs of global warming

In a recent work* from the Paris-based Organisation for Economic Co-operation and Development. This makes clear that only the western industrialised member states would need to cut emissions by 44 per cent compared with the level that could be expected on a "business-as-usual" basis if they were to act alone in the spirit of Rio to stabilise their CO₂ emissions at 1990 levels in the period to 2050. But this effort, which would inevitably cost output, would reduce world emissions by only 11 per cent from what they would otherwise be.

"Thus", the OECD says, "action to tackle the climate change issue must involve the major non-OECD countries emitters - China, India and the former Soviet Union."

At first sight, Russia is not the biggest problem. On a busi-

ness-as-usual basis, the OECD projects that China and India, with their much larger populations and relatively unsophisticated technologies, will increase carbon emissions by an annual average of 3.7 and 3.9 per cent respectively in the period from 1990 to 2050. By contrast, the growth of carbon emissions in the former Soviet Union is projected at 1.4 per cent a year on average. In the OECD area, emissions would grow by 1 per cent a year if no action is taken.

All Nippon Airways plans to cut dividend

By Paul Betts, Aerospace Correspondent

ALL NIPPON Airways (ANA), Japan's largest airline, is planning to cut its dividend in the face of the downturn in the international and Japanese airline markets.

The airline expects to report sharply lower net profits of around Y5bn (\$27m) for the year ended March, 1993, against a profit of Y7.6bn previously.

Fees are expected to remain under pressure during the next two years, Mr Isao Yagi, ANA's corporate planning director, said.

Mr Taiji Kameyama, ANA's head of international relations, warned the dividend was likely to be trimmed. "It represented 10 per cent of the face value of the shares last year; this percentage will most probably be reduced this year," he said.

The airline is embarking on rationalisation and cost-cutting, including increased use of aircraft leasing, the reduction in the annual intake of new recruits, the possible hiring for the first time of lower-cost foreign cabin attendants, and the redeployment of corporate headquarters staff to sales and marketing functions.

Faced with a Y10bn increase in interest charges, the airline is reining back its 1991-95 capital spending programme from Y1.300bn to Y1.000bn, and is delaying the introduction of some new aircraft.

"The economic costs of reducing CO₂ emissions, OECD Economic Studies No 19, Winter 1992, FFY120 from OECD Publications Service 2 rue André-Pascal, 75775 Paris Cedex 16 or from HMSO.

Soros puts \$400m into rising gold market

By Deborah Hargreaves in London

MR GEORGE Soros, the international currency trader, has agreed to buy a \$400m stake in Newmont Mining, the Denver-based gold mining company, as a way of gaining exposure to the rising gold market.

The company will announce today that funds controlled by the Soros family have bought 6.8m shares in Newmont and agreed in principle to buy a further 3.2m shares at a cost of \$39.50 a share. The shares are being sold by General Oriental Investment which is controlled by Sir James Goldsmith and Lord Rothschild's RIT Capital Partners.

The sale will make Mr Soros the second largest shareholder in Newmont Mining with 13 per cent, leaving Sir James with a stake of about 30 per cent. Mr Soros rose to fame in September as he made a \$1bn profit when the UK was forced to leave the exchange rate mechanism of the European Monetary System.

Mr Gordon Parker, Newmont's chairman and president, said yesterday that he "couldn't have imagined a better home for the shares, for what it tells the world about sentiment on gold".

The gold market has been improving in recent weeks with the price reaching a six-month high of \$347 per troy ounce on Friday.

"We're seeing the confluence of gold as a commodity and gold as money," said Mr Parker. Demand for gold from Asia has been increasing while production has remained steady.

Wall Street firms are well aware of the potential pitfalls.

In the past few years many of the biggest players in the industry have added a new dimension to their earnings profile by aggressively building up a presence in asset management - an area traditionally dominated by the big mutual funds and money managers.

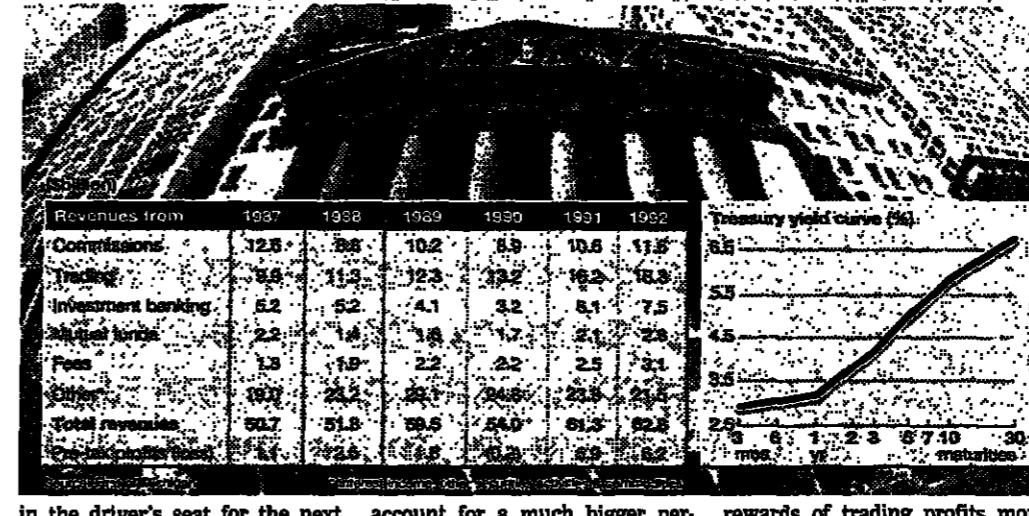

The asset management business has grown quickly. In 1985 the fees Wall Street firms earned from managing client accounts totalled \$947m. Last year, the business brought in more than \$21.3m. As for the danger of increased earnings volatility, Wall Street firms are well aware of the potential pitfalls.

In the past few years many of the biggest players in the industry have added a new dimension to their earnings profile by aggressively building up a presence in asset management - an area traditionally dominated by the big mutual funds and money managers.

Mr Parker said that Sir James' decision to sell part of his Newmont stake was consistent with his plans when he bought into the company two and a half years ago. Sir James started selling Newmont shares in February when he placed 1.8m with institutions. At the time, he insisted he was still bullish on gold.

Sir James acquired a 42 per cent holding in Newmont as part of a deal with Lord Hanson in October 1990.

Where Wall Street earns its money

in the driver's seat for the next couple of years, at least until interest rates come back up."

Low US interest rates and the steepening of the yield curve (the widening in the differential between yields on short- and long-term government securities) have been key elements in the traders' success.

Low rates have reduced firms' total interest costs, which despite large debt loads are now shrinking to 1987 levels. And the steep yield curve has allowed traders to borrow cheaply at the short end and use the money to buy longer-term assets that not only earn higher rates of interest, but which also have been appreciating considerably in value because of the booming bond market.

In this favourable climate, bond traders have thrived. According to Mr Long, trading revenues at Wall Street firms reached \$16.3bn, up from \$9.9bn in 1988. Over the same period, however, revenues from the M&A business have tumbled.

In 1988, at the height of the M&A boom, Wall Street's investment bankers brought in \$1.37bn of fees from M&A transactions. By last year, fees were just \$21.3m. Trading revenues now

account for a much bigger percentage of total industry earnings. In 1988, earnings from trading accounted for about 19 per cent of industry revenues, while

investment banking revenues (which include M&A, underwriting and corporate advisory fees) accounted for about 10 per cent of the total. By 1992, trading contributed 26 per cent of revenues, while the share taken up by investment banking had risen to only 12 per cent.

Now that they play a greater role in generating profits, it is no surprise that traders are assuming more power on Wall Street. Yet does this mean that firms will now concentrate their energies more on their trading businesses, and less on the traditional work of advising corporate clients? Such a strategic shift would make the industry's earnings already very volatile, even more prone to sudden swings.

A n emphasis among Wall Street firms on trading for their own account, however, is not a particularly new development. Since the mid-1980s securities houses and investment banks have increasingly pursued the shorter-term

Deal soon on Leyland trucks

By Ian Hamilton Fazey,
Northern Correspondent

A £40m-plus deal, including the management buy-out of Leyland Daf's Lancashire truck factory, is expected to be finalised this week following agreement over the weekend by Barclays Development Capital to provide all the equity finance.

An equity injection of £5m was the final piece needed to complete a complicated package involving the company's management, clearing banks, Barclays Development Capital and Lancashire Enterprises.

Coopers and Lybrand, the management's principal adviser, will today start what it hopes will be final negotiations with Arthur Andersen, the Leyland Daf receiver. The aim is to complete the deal

before Friday.

If successful, the buy out would secure the 900 jobs remaining at the truck factory in Leyland, Lancashire. Nearly 1,200 jobs have been lost there since Daf's parent company in the Netherlands went into receivership in February. If the factory was to close, it would leave a gap in Daf's range of trucks in Europe.

Under the deal now proposed by Coopers, Lancashire Enterprises - the privatised industrial development arm of Lancashire County Council - would buy the 230-acre site and 1.8m sq ft complex of factory buildings from the receiver. It would then lease back 800,000 sq ft of factory space to the truck company's management - which is all the truckmaker says it will need - and develop the rest as a science and technology park.

The deal would buy the business and other assets - such as equipment, stock and work-in-progress - needed to run it, but would be free of the burden of having to buy land and buildings, the bulk of which it does not need.

Most of the management's deal would be financed with bank loans. It has been talking with Barclays and NatWest.

The package envisages

deferred terms for the buyout, involving a large down payment, of which the equity injection is an important element. Staged payments would

follow over several months, funded from cash flow. The company has sufficient contracts with the British Ministry of Defence and Daf dealers throughout Europe to guarantee future payments, provided it can keep trading.

Lancashire Enterprises is confident about marketing the site, which is strategically well-placed near the M6 motorway south of Preston. There is a large pool of skilled local labour because of the concentration of defence industries in the area.

Mrs Louise Ellman, leader of Lancashire county council and deputy chairman of Lancashire Enterprises, said: "This deal would maintain truck production in the area and safeguard thousands of jobs among suppliers, many of whom are locally-based."

Anagen valued at £40m in June float

By Norma Cohen,
Investments Correspondent

ANAGEN, a biotechnology company with no sales to date, plans to raise about £10m through a flotation in June. About 25 per cent of the company's capital will be sold in the float through its brokers Albert E. Sharp, giving a total market valuation of some £40m.

Anagen is developing a line of automated medical diagnostic systems following development of a fully automated

immunoassay system.

The initial product, to be known as AN2000, is a fully automated immunoassay system which is an ultrasensitive method of measuring the presence of cancer markers, fertility hormones and other substances in blood.

Mr Mervyn Sennett, managing director, said the company will not be ready for commercial production until November 1993 although its product is currently in pre-production.

Its development costs - so far at £14.5m

- are financed by a consortium of venture capital firms led by Schroder Ventures and including CINVEN, the venture capital arm of the Coal Board pension fund, Electrica Capital, Norwich Union Venture Capital and Qwesta.

Anagen has signed a marketing agreement with Organon Teknica, a subsidiary of Dutch pharmaceutical chemicals company Akzo. Teknica already markets a line of tests for such diseases as hepatitis and HIV, considered complementary with the product line contemplated by Anagen.

NEWS DIGEST

through at 27.41m (27.47m) equal to 1.93p (1.95p) per share.

The second quarterly dividend is 1.07p (1.04p) indicating a total for the year of not less than 4.28p (4.19p).

18% rise for British Assets Tst

OVER THE six months ended March 31 1993 net asset value of British Assets Trust rose by 17.9 per cent to 105.9p.

In particular the trust benefited, as a consequence of sterling's devaluation following exit from the ERM, from holding overseas assets.

A year earlier at March 31 1992, net asset value stood at 84.4p.

On the revenue side the half year produced a total of £14.6m, against £15.7m. Net available for ordinary worked

last time of 2.8p.

• The net asset value of 77.53p shown for Fleming Income and Capital Investment Trust on Friday was attributable to the ordinary shares. The value of the unit was 110.83p.

Jove Investment capital growth

At February 28 1993, net asset values of Jove Investment Trust had shown increases.

Per capital share the growth was from 29.04p to 38.38p and per income share the rise was from 51.5p to 51.84p.

At September 30 1992 it was shown as 60.47p.

In the half year ended March 31 1993 gross income came to £2.05m (£1.74m) including

£338,000 (£65,000) gains from dealings.

Earnings per share were 0.59p (0.3p) and the interim dividend is unchanged at 0.25p.

The group employs about 1,900 people and has six manufacturing sites in the UK and one in Belgium. Some 600 employees participated in the 1991 buy-out, which was organised by CINVEN, the venture capital arm of the Coal Board pension fund and Barclays Bank among others.

Mr Gilchrist said: "By focusing on market sectors with international exposure such as confectionery, drinks, tobacco and pharmaceuticals, Field has proved resilient to the recession, increasing sales by an average of 11 per cent per annum over the last five years."

Field is to use the proceeds to help it expand steadily in higher-margin areas such as pharmaceutical packaging.

Fleming Contd

asset value rises

Fleming Continental European Investment Trust reported net assets per share of 271p at March 31, a 15 per cent increase on the 235p of a year earlier.

Net revenue for the year to the end of March was £1.8m (£1.55m) for earnings per share of 2.71p (2.22p). A single final dividend of 2.7p is being recommended, compared with a total

ONE OF THE WORLD'S TOP FIVE... Eskom, South Africa's national electricity utility, generates more than half of the electricity consumed in the whole African continent, and more than 90% of that consumed in its domestic market. It is the fourth largest utility in the world in both sales and generating capacity, according to the Tokyo Electric Power Company's global comparisons.

...AMONG THE WORLD'S TOP TEN... Despite the severe drought, the world recession, and political upheavals, sales in 1992 fell by only 0.4% and the average growth over the last 5 years was 2.4% per year. With a strong balance sheet (total

assets exceed +2 billion rand ie. 1.3 billion US dollars, firm control of costs and capital expenditure, and increasing interest cover, Eskom's financial management is among the best. Its treasury was named as one of the top 10 in the world in the recent international risk management awards held by the Economist Intelligence Unit and Emcor Risk Management Consulting.

...AND ONE OF THE WORLD'S BOTTOM FIVE... As an independent, self-financing company, with excess capacity through the rest of the century, Eskom is committed to extending its efficient distribution system to bring the social and economic benefits of affordable electricity to several million more homes and, through the development of a regional grid, to neighbouring countries. And we mean affordable. On price, the UK Electricity Association has ranked Eskom as the second lowest in the world. And we have given a commitment to our customers to reduce the real price of electricity by a further 20% over five years. We are one year into that period and have achieved a real price reduction of 4.9% already.

ELECTRICITY HOLDS THE KEY TO SOCIAL AND ECONOMIC PROGRESS IN SOUTHERN AFRICA.

Changing image at Pearson

Ray Snoddy looks at its strategic move towards TV

THE Thames Television executive said with a smile that Pearson had "started wearing its hair just a shade longer."

He was referring to the planned acquisition of Thames by the publishing, banking and industrial group noted more for caution and a rather conservative outlook than getting involved in racy and high risk businesses such as independent Dent television production.

Yet with irrevocable undertakings already given for Thora EMT's 58.65 per cent stake in Thames at 200p a share, Lord Blakenham, chairman and chief executive of Pearson, will soon find himself in control of Rumpole of the Bailey, the smutty double entendres of the Benny Hill Show and Arthur Daley's paper and packaging group.

The recession caused SCA to sell Field in 1991 through a £109m management buy-out led by Mr Jim Gilchrist, the company's chief executive

since 1986.

In spite of these changes of ownership, Mr Gilchrist said the business had continued to grow steadily and now had 14.5 per cent by value of the UK market for folding cartons.

Field's cartons are used to package brands such as Kodak, Cadbury's Milk Tray and Chivas Regal, and a significant proportion of its output is exported. Sales for the year to April 4 are estimated to have grown from £124m to not less than £135m.

The group employs about 1,900 people and has six manufacturing sites in the UK and one in Belgium. Some 600 employees participated in the 1991 buy-out, which was organised by CINVEN, the venture capital arm of the Coal Board pension fund and Barclays Bank among others.

Mr Gilchrist said: "By focusing on market sectors with international exposure such as confectionery, drinks, tobacco and pharmaceuticals, Field has proved resilient to the recession, increasing sales by an average of 11 per cent per annum over the last five years."

Field is to use the proceeds to help it expand steadily in higher-margin areas such as pharmaceutical packaging.

totally new departure. The publishing group already has stakes in British Sky Broadcast

and the satellite television venture, and in Yorkshire Tees Television.

However, last autumn the Pearson board took a strategic decision - that it had to have a more central role in visual media to complement its profitable and mature print based

businesses such as the Financial Times and Penguin Books.

Although Pearson has no

plans to dispose of its oil services and fine china businesses

- at least for the foreseeable future - the company is likely to move towards being a more tightly focused media and entertainment group.

Against such a background Pearson and

Thames were destined

to meet.

Parts of the Thames deal are easy to value - others much less so. Apart from a net cash balance of £13.5m, up £1.5m from the recently revalued £20m stake in the Astra satellite system and freehold studios at Teddington.

The Thames programme library of more than 10,000 hours has been variously valued at amounts ranging from £18m to £50m. Mr Derek Hunt, the retiring finance director of Thames, insists the truth definitely lies somewhere between

those two figures.

The programmes already being shown are the UK Gold Library Channel launched on satellite by Thames and the BBC. A second channel of general entertainment aimed mainly at women is expected in the autumn.

Programme making is even more difficult to value. ITV will pay Thames more than £40m this year for its programmes, many of them in the ITV top 20, but so far no longer term contracts have been signed. Rating winners such as the three times a week police series The Bill are likely to have a considerable life on ITV. Thames' longer term success will depend on its ability to come up with new ideas for sale to UK broadcasters and international markets.

But even if a fraction of the hundreds of television channels now being promised actually materialise, then there will be a growing demand for programmes from those who own the rights in them.

Thames represents the core of a ready-made television division for Pearson. But Mr Frank Barlow, managing director of Pearson and current chairman of BSkyB, clearly sees it as something of a beginning.

Stakes in other broadcasters around the world and the launch of new international channels could follow.

Packer, Murdoch in joint satellite TV licence bid

By Kevin Brown in Sydney

TELECOM Australia, the government-owned telecommunications carrier, has joined forces with News Corporation, Mr Rupert Murdoch's US-based media group, and Mr Kerry Packer's Channel Nine television network to bid for Australia's first satellite television licence.

If the bid is successful it would establish Mr Packer, proprietor of the Consolidated Press Holdings media group, as the dominant force in Australian commercial broadcasting. It would also mark the return to Australian broadcasting of News Corp, which controls 70 per cent of daily newspaper circulation through its News subsidiary.

The consortium said other investors might join the consortium before the end of the week - the bidding deadline for two four-channel satellite broadcasting licences being offered by the government.

Australia's two other commercial television broadcasters are believed to be seeking a role in satellite television, as are a number of US media groups, including Time Warner, Times Mirror and the Los Angeles Times.

Independent Newspapers, the Irish newspaper and a subscription television group run by Mr Tony O'Reilly, chairman of Heinz, the US food manufacturer, have expressed a wish to become involved.

The inclusion of Telecom gives the consortium signifi-

cant technical flexibility if problems emerge in the development of the digital transmission system which will be a condition of both licences.

The formation of the consortium clears the way for a US-based bid for the second licence, which was reserved for new entrants in an attempt to reduce the concentration of Australian media ownership.

The uncertainty about the shape of subscription television services adds to confusion about the future of the John Fairfax Holdings newspaper group, the main competitor to News Corp.

The government agreed last week to allow The Telegraph, Mr Conrad Black's UK newspaper group, to increase its shareholding in Fairfax from 15 per cent to 25 per cent to "safeguard" its investment.

In spite of its small shareholding, The Telegraph has management control of the group, which publishes the Sydney Morning Herald, The (Melbourne) Age, the Australian Financial Review and Business Review Weekly.

Mr Packer recently acquired 10 per cent of Fairfax, but is unable to launch a takeover bid unless he reduces his controlling stake in the Channel Nine network to less than 15 per cent.

• An article published last week referred to Mr Dan Colson as deputy chairman of The Telegraph. In fact, Mr Colson is vice-chairman of the board. The deputy chairman is Sir Frank Rogers.

Mitsukoshi slips into red as sales fall 3.9%

By Charles Leadbeater
in Tokyo

MITSUKOSHI, Japan's most famous department store yesterday reported a Y2.16bn (\$19.5m) pre-tax loss for the year ended February.

The company blamed the fall in consumption plus a shift away from the luxury goods which Mitsukoshi is famous for. Mitsukoshi is facing tough competition from a string of newer retailers.

The results reflect the difficulties which Mitsukoshi has had in cutting costs in the face of a downturn in sales. It is bearing a heavy depreciation charge for aggressive expansion in the late 1980s.

The Japan Chain Store Association yesterday reported that sales last month were 4.6 per cent down from the year before, the seventh consecutive monthly fall. The decline was led by a 34 per cent fall in sales of household goods.

Court gives go-ahead to Marriott bond group

By Nikki Tait in New York

A US court has declined to dismiss the fraud suit brought by certain bondholders of Marriott Corporation, against the hotel and food services group. The bondholder group is led by PPM America, the Chicago-based US fund management arm of Britain's Prudential insurance group.

The controversy centres on Marriott's plan to damage its financially-healthy lodging business, leaving behind a company which retains the

property assets and the bulk of the group's large debts.

The PPM-led bondholders alleged that Marriott sold them debt securities in the spring of 1992, when it knew of the plan. Marriott, which announced the plan last autumn, sought to have this suit dismissed.

Judge Alexander Harvey, in the US district court in Maryland, denied to dismiss four counts of the complaint but dismissed a fifth count. This allows the PPM-led bondholders to go ahead with the pre-trial "discovery" process.

Chrysler share sale raises \$100m

By Martin Dickson
in New York

CHRYSLER, the US car manufacturer, has raised \$100m by selling a further tranche of its shareholding in Japan's Mitsubishi Motors to US investors over the past few weeks.

Chrysler said the sale of 15.5m shares left it with a holding of about 35m shares in the Japanese vehicle manufacturer and cut Chrysler's stake from about 5.9 per cent to 4.1 per cent.

Chrysler has been gradually reducing its Mitsubishi stake as part of a plan to concentrate financial resources on its own motor operation.

In March last year, Chrysler sold about 43.6m shares in the Japanese car manufacturer for about \$215m.

Chrysler said the company planned to sell its remaining Mitsubishi shares, which are worth some \$200m at current exchange rates, but had yet to set a timetable for the disposal.

It said it may take a gain on the latest sale into its second-quarter earnings.

Empty first class on All Nippon Airways

Paul Betts on the response to dwindling domestic demand at the Japanese airline

All Nippon Airways, Japan's largest airline, and one of world's biggest, suspended for one day its first class service on its London to Tokyo flight last Sunday because there were no paying first class passengers.

On its Tokyo to Sydney route, it has discontinued first class. And on its recently-launched Tokyo to Shanghai service it has decided to offer only business and economy class.

ANA has been hit by the turmoil in the international airline market as well as at home by the downturn in the Japanese economy.

"We've seen a big decline in first and business class passengers of between 10 per cent and 20 per cent depending on specific routes," said Mr Isao Yagi, the airline's corporate planning director. "As a result we are thinking of discontinuing first class service on certain routes," he added.

The rationalisation of the airline's first class service is only one relatively small aspect of a broad series of measures ANA is undertaking to adapt its operations to difficult times. Although the airline remains one of the few big international carriers to remain profitable, it expects net earnings for the year ended March, 1993 to have fallen to

about Y3bn (\$268.5m) from Y7.6bn in 1991-92.

Profits are likely to come under even greater pressure during the next two years. "We are going to make the maximum effort to achieve another Yen 3bn profit next year but it's going to be tough," Mr Yagi said.

The airline's shareholders are expected to approve in June the appointment of Mr Seiji Fukatsu as ANA's new president and chief executive. Mr Fukatsu, head of the airline's domestic Air Nippon subsidiary, will take over from Mr Akio Kondo, who is to become vice-chairman.

The new chief executive is expected to place the emphasis on rationalisation, unlike Mr Kondo, who presided over the airline's international and domestic expansion during the past 6½ years.

Senior ANA officials have acknowledged that the costs of Japanese carriers have been too high.

However, they explained it was virtually impossible even in hard times to adopt the same sweeping approach to restructuring and job cuts as airlines in other parts of the world.

ANA has established a task force to study ways of improving efficiency, cutting costs

while increasing revenues in the difficult climate. Senior ANA managers indicated that cost saving measures could include the hiring for the first time of lower cost foreign cabin attendants and a reduction in the traditional annual intake of new trainee recruits.

It has started relocating headquarters staff to sales and marketing tasks to strengthen the airline's marketing and sales operations.

"We are also trying to contract out some of our functions and have postponed the delivery of some new aircraft on order," Mr Yagi explained. ANA is cutting back its 1991-95 capital expenditure plan from Y1.300bn to Y1,000bn. It is resorting increasingly to leasing rather than purchasing aircraft. The airline is considering trimming its dividend.

The aim of ANA officials was to improve competitiveness by reducing costs close to the level of rival US carriers. However, they conceded it would be difficult to bring Japanese costs down to those of other Asian carriers.

The strategy is likely to slow down the rate of the airline's international expansion. ANA, whose operations have been centred in Japan where it has a 53 per cent share of the domestic market, started

ANA has postponed the delivery of some new aircraft

expanding into the international market in 1986. With a network covering 18 international destinations, Mr Taji Kameyama, head of international relations, said the company's international route expansion was complete. The next step will be to increase the frequency of services on some of these routes. In the shorter term, the airline sees the biggest potential in the Asian and especially Chinese markets.

"Our domestic services will continue to be in the future our core business," Mr Yagi said.

The company is slowing down the expansion of its

international hotel business and has suspended plans to open a hotel in London.

The airline's strong presence in the domestic market has helped it weather the downturn better than Japan Airlines, its rival which relies on international services for 70 per cent of its business. But growth has slowed down in the Japanese airline market after averaging about 10 per cent a year during 1985-90.

"For the first time since 1985 we had a small decline in domestic passenger numbers in our fiscal year to March 1993," Mr Yagi said.

In spite of a 0.3 per cent fall in domestic passengers to 33.3m, the services remained profitable last year.

By contrast, the international operations facing fierce fares competition lost money, although passenger numbers rose by 7 per cent to 1,574,201.

ANA expects competition on international services from Japan to intensify during the next two to three years with the completion of new runways at Tokyo and Osaka offering greater access for rival international airlines to fly into the Japanese market.

"Our domestic services will continue to be in the future our core business," Mr Yagi said.

PRIVATISATION OF GAS DEL ESTADO S.E.

UK companies hit the US private placement trail

UK companies are flocking to the US private placement market, attracted by the ready availability of long-term funding at relatively favourable terms.

Last week saw the announcement of a \$16m US private placement for Lucas Industries, the engineering group. The deal, which has a 5.95 per cent coupon and 12-year maturity, comes hot on the heels of similar placements for the Vinten Group, H.P. Bulmer, and Hunting. Corporate advisers expect more UK borrowers to follow suit.

UK companies say there are advantages in using the US private placement market. "Interest rates in the US are at their lowest in nearly two decades, so you can lock into low fixed rate financing which is very attractive," says Mr Richard Green, financial director at Vinten. The group, a camera mountings and systems, surveillance and electro-optics company, raised \$40m of 10-year money this month. It is paying

a coupon of 6.72 per cent to the US institutions which hold its bonds. By comparison, Mr Green estimates the company would have had to pay at least 7.52 per cent for fixed rate dollars in the UK.

As important as the low interest rates is that companies find it easier to borrow long-term (from seven years up to about 15, depending on the borrower) in the US private placement market.

That UK companies have turned their attention to the US market reflects the lack of suitable borrowing opportunities on their own doorstep.

Many of the UK names which have followed this route point out that they have little alternative to obtain long-term financing. The pricing on bank loans has risen over the past three or four years, reflecting new controls on capital and concern about the creditworthiness of borrowers at a time of recession.

H.P. Bulmer, the cider group, raised \$25m of seven-year money and \$20m of 10-year money recently. Mr Michael Ward, group finance director, says: "We wanted a source of long-term funds. Currently there is a lack of preparedness by the UK clearing banks to extend over three years, so if you are looking for five to seven-year money you have to be prepared to pay a very high price."

Mr Ward points out that he would expect to pay a margin of 75 basis points over the London interbank offered rate (Libor) for loans of between three and five years, and "quite a significant premium" for loans of over five years.

Mr Green says there is more flexibility in terms of covenants with a US private placement than with straightforward bank lending.

In his view, the tight UK covenants - which set out the limits on financial ratios such as gearing - could prevent a company from mak-

ing acquisitions which in the longer term would help to lift its profits.

While some of the bigger, blue chip names can tap the Eurobond market for longer-term financing, this route is not open to less renowned credits. "Companies below the double-A rating level cannot access the Eurobond market easily," points out Mr Stephen Schechter, managing director at Wertheim Schroder.

Lucas's long-term credit rating was recently downgraded by IBCA from A- to BBB+. Mr Edward Freeborn, Lucas's director of corporate finance, adds that given the current credit rating "it would not have been as easy" to go to the Eurobond market as to the US private placement market. Others, such as H.P. Bulmer, do not have a credit rating so would not be able to tap the Eurobond market, or else are too small in size. "We have a market capitalisation of about £200m and pre-tax profit of about

£13m... certainly for us a Eurobond would be out of the question," points out Mr Dennis Clark, finance director of Hunting.

Proceeds from US placements are often used to refinance more expensive debts at lower rates. Hunting has used proceeds from its \$50m US private placement to replace its existing dollar borrowings at lower rates, while the proceeds from its \$35m seven-year placement have been converted into floating and fixed rate sterling. Lucas plans to use the proceeds of its bond placement to refinance its short-term debt, although it swapped proceeds from an earlier private placement into floating rate dollars and sterling. H.P. Bulmer chose to swap its long-term dollar borrowings into floating and fixed rate sterling to give effective 10-year funding at a margin over Libor of less than one percentage point.

Sara Webb

RISK AND REWARD

Plotting a safe course along the yield curve as the slope changes

which had fallen to around 121, per cent minus Libor by the time the flow of paper began to dry up a month ago.

Medium-term notes specifically structured for investors looking to play the German yield curve have been produced in abundance in recent months. Typically, the redemption price of the paper is linked to the fall in short-term interest rates: the sharper rates fall, the higher the redemption price.

The longer end of the yield curve has swung considerably, with the spread between five and 10-year yields lurching up as the curve has become positive. According to some, there is still a long way to go. Mr Jeremy Hale, fixed income economist at Goldman Sachs in London, points out that the differential between five and 10-year yields has shifted more slowly than in other interest rate cycles, suggesting there is a sharper swing to come.

Simply buying short-dated paper

has had one big disadvantage: the relative lack of duration (the life of the bond, taking into account both the maturity date and the timing of coupon payments) of short-term paper makes it less price sensitive as interest rates fall. Why pay more for a higher-yielding bond if it repays anyway in the near future?

One answer has been to move out along the yield curve towards the five-year area, picking up duration without losing the relative outperformance of the short end of the yield curve. Also, banks have used the swap markets to structure instruments specifically aimed at investors wanting to take a position on the shape of the yield curve.

These have sold well in recent months, though could prove expensive if the curve fails to steepen as sharply as many investors expect.

This year has seen the issue of more than DM6bn of reverse floating rate notes, which pay investors a higher return as interest rates fall, according to Deutsche Bank. The buyers of this paper were almost exclusively German retail investors.

As expectations of falling interest rates have grown, these instruments have progressively offered less of a return: the first issues paid 14% per cent a year minus the London interbank Offered Rate, a level

the Halifax Building Society and the Republic of Ireland.

"As recently as a year ago, this type of investment was very innovative - no one much in London was doing it," he says. US investment banks have more recently been marketing the idea hard both to issuers and investors, and making considerable headway.

Such swap-based products have a

cost, of course - both the market spread, and the profit margin of the bank that constructs them. As a Deutsche Bank official says: "Most of our bigger investors can reproduce these in the market by taking out a number of swaps."

Most investors still prefer to focus their efforts on getting the direction of the market right, rather than on innovative investment products.

Net income per share	FF 36.30	FF 44.20							
Code flow	2,739	2,126							
Cash flow per share	FF 123.90	FF 99.00							
On a comparable structural basis, i.e. including sales of Wagons-Lits, 1991 sales would have amounted to FF 27,648 million. Thus, comparable sales increased by 10.6% in 1992.									

Accor reports 1992 results on target

ACCOR reported 1992 consolidated net income of FF 802 million and 1992 consolidated cash flow of FF 2,739 million. These results include the initial full-year contribution of Compagnie Internationale des Wagons-Lits et du Tourisme, which is fully consolidated. The Group's performance in 1992 was in line with previously announced forecasts.

The 28.8% increase in cash flow during the year contributed to the strengthening of the Group's financial structure and reflects the effectiveness of its geographical and sectoral diversification strategy: 61% of 1992 sales were generated outside of France, and 65% by non-hotel activities.

The 15.5% decline in consolidated net income reflects an increase in financial expenses and goodwill amortization, both related to the Wagons-Lits acquisition, as well as depressed hotel activities in a sluggish economic environment. Efforts to develop synergies were launched in 1992, but have not yet had an impact on earnings.

FINANCIAL TIMES SURVEY

European Finance and Investment: Portugal

Monday April 26 1993

While Portugal may be the last to fall into the recession that has gripped most of the European Community, it is determined to be the first to climb out. Peter Bruce and Peter Wise look at the prospects of its catching up with richer EC partners so that it can take full advantage when recovery comes

A head above the crowd

PORTUGAL has a history of arriving late for recessions. In the 1970s and 1980s, the Portuguese economy boomed when the rest of Europe suffered. But then it sank into crisis, just as its peers began to celebrate recovery. This time round, Lisbon's centre-right Social Democratic government is determined not to repeat the pattern.

As a small, open economy, Portugal is being tugged by the recession that is gripping most of its European Community partners. But the government is convinced that however low growth in Europe dips, Portugal can keep its head above the crowd.

Portugal may again be the last to fall into recession, government officials say, but it is determined that it will also be the first to climb out.

Why in past decades did Portugal feel the full brunt of recession when other countries were enjoying an economic comeback? The answer, according to Mr José Braga de Macedo, the finance minister, is that profligate governments threw money at problems and lost control over budget deficits.

This time round, he says, things will be very different. Structural measures have

been taken to stimulate the competitiveness and productivity of the economy, a tightly-controlled public spending programme focuses on investment and keeps budget deficits from eating into economic growth, and a social pact should help keep wage rises moderate, he argues.

"We have the resilience and the policies to hold on until the recovery comes and then take full advantage of that recovery," he says.

Portugal today is working to a markedly different set of economic and business rules than when it was dragged down by recession in the 1970s and the 1980s. EC entry came in 1986 and with it the support of a massive inflow of structural funds and later a strong commitment to economic and monetary union.

This goal led to the development of a 1992-95 convergence plan, Quantum II, that set annual targets aimed at bringing inflation, public debt and budget deficits down to EC averages. The election of Mr António Cavaco Silva as prime minister of majority government in 1987 brought political stability and business began to be able to plan medium and long-term strategies.

Low wages and high growth

The trading floor of the Lisbon Borsa

rates, well above the EC average, attracted an important inflow of direct foreign investment.

The late 1980s were rosy years of expansion for Portugal when gross domestic product growth peaked at 5.2 per cent and capital investment climbed at rates of more than 15 per cent a year.

But, at the same time, as

Portugal became more tightly locked into the EC - the Community today accounts for 75 per cent of Portugal's foreign trade - so the risk of being caught up in Europe's misfortunes grew. Recession began to cast its shadow across Portugal as darkly as elsewhere in Europe.

Shaken by the aftermath of the Danish vote against

ratipling the Maastricht treaty, some economic commentators in Portugal began to predict disaster, warning that their country was too small and too exposed to escape the recession afflicting their neighbours.

The government originally forecast 3 per cent GDP growth for 1993 but has since revised that figure down to 1.75 per cent. This contrast sharply

	1985-90	1991	1992	1993/4
Gross domestic product	4.3	2.6	2.3	1.75

with what some independent analysts predict. Mr Rui Martins dos Santos, chief economist at Banco Português de Investimento, for example, estimates growth at zero to 0.5 per cent.

But this is a numbers game in which the finance minister refuses to get tangled up. "What is important is not exactly how much we grow but that we grow more than rest of Europe, to ensure that we are continuing the catching up process," he says.

"As long as we are growing faster than the rest of the Community, we are dampening the effects of the foreign recession," he continues.

"If the EC grows 2 per cent and we grow by 3 per cent, that is one thing. But if Community growth is zero, then reaching just 1 per cent is much, much, harder. If EC growth is negative by, say, 0.5 per cent then just reaching zero growth would be absolutely wonderful."

But in the bleak climate currently facing Europe, what makes Portuguese officials so sure they can escape all but a smidgeon of recession this time and come up smiling as soon as European growth re-establishes itself?

Lisbon believes it has learned from the mistakes of some its EC partners and put the right structural measures in place at the right time. 1992 brought tax harmonisation, placed the escudo in the exchange rate mechanism of the European Monetary System and saw the beginning

of the reform of the public administration.

Last December the escudo became fully convertible when the Banco de Portugal, the central bank, lifted all restrictions on currency transactions. Risk capital funds to support private investment are being made available by both the public and private sector.

Competition in a newly-liberalised financial sector has been stimulated by a new banking law and the virtual completion of a sweeping privatisation programme.

The result has been a drop in corporate interest rates and more attractive and flexible cash-management services.

The government has sharply cut its borrowing needs, raising a considerable amount of funds abroad and freeing up credit for the productive sector.

Politically, the government is in a strong position. While it could suffer losses in local elections scheduled for December, the next general election is not due until October 1995. The opposition Socialists do not appear to have the strength to force an early poll, even if the economic situation seriously deteriorates.

Were Portugal to escape the recession, that would be a boon as it struggles to catch up with its richer EC partners. Ironically, the know-how for doing so may come from peering quietly over the fence to see where the country's more advanced partners have gone astray.

MADEIRA - A CLIMATE FOR BUSINESS

Madeira, the European Community's newest international business centre. Only 3 hours away from most European capitals and just over 1 hour from Lisbon, Madeira is poised to take full advantage of 1992, the year of the European Single Market.

Strategically placed on most Atlantic shipping routes, Madeira is unmatched as an offshore centre in the European Community.

Free Trade Zone
All industrial and commercial activities are permitted within the free trade zone, subject to the preservation of the natural environment and to the rules of public health and national security.

Offshore Financial Centre
Banks and financial institutions may establish offshore operations anywhere in Madeira, free from domestic restrictions. Transactions may be carried out in any currency, with supervision from the Central Bank of Portugal.

International Services
International service companies such as trading, holding, management and trusts will be able to conduct and plan international investments through Madeira thus benefiting from all the fiscal incentives available.

International Shipping Register
MAR, Madeira's International Shipping Register offers the global shipping industry some of the most favourable and competitive conditions available today. All vessels registered will fly the Portuguese flag. A wide range of tax and financial incentives are also available to investors, making the package even more irresistible.

Madeira. Your high-yield investment in the future.

150 years of experience

a background for the future

150 years ago the vision of a man marked the history of the oldest commercial banking institution in Portugal.

As it is today, Banco Totta & Açores is the result of mergers and acquisitions of several banks and finance houses over the years, dating back to 1843.

Proud of its past, Banco Totta & Açores is now one of the leading banks in Portugal. But more than just a bank, Totta became the true expression of a powerful financial group.

Totta, probably the most experienced Portuguese bank in international business.

Government "interference" at the central bank

Why the minister stepped in

MR Jorge Braga de Macedo, Portugal's forceful finance minister, looks almost hurt when asked if he might not have had just a tiny bit to do with the resignation of the deputy governor of the Bank of Portugal in March and the subsequent attack on the

escudo in the foreign exchange markets, writes Peter Bruce.

He does not quite put his hand on his heart and say "Who, me?", but neither does he apologise for any trouble he might have caused.

On Thursday March 11 Mr Braga de Macedo made a

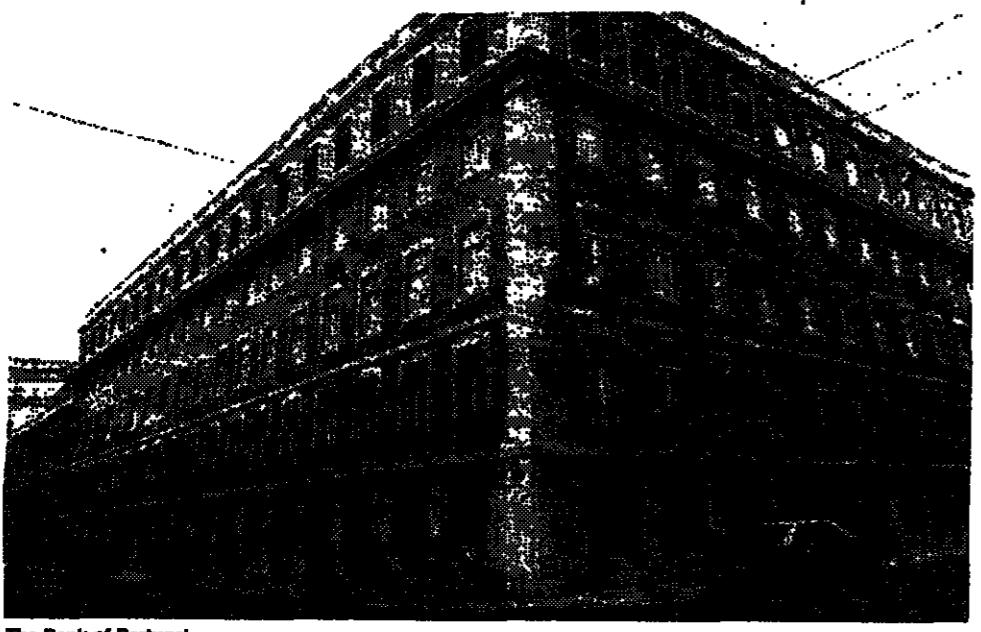

speech taking the bank to task for not paying attention to the needs of what he called the "real economy" and for not playing a forceful enough role in lowering interest rates. Mr Antonio Borges, its popular deputy governor, immediately resigned in protest at the min-

ister's "interference". At one level, the affair probably assumed more importance than it deserved. Mr Borges has not explained exactly why he left and it is assumed by some market operators in Lisbon that he may have been looking for a suitable excuse to leave the bank any way.

The most ominous result, though, occurred in the foreign exchange markets, where the escudo immediately came under pressure, dropping to Es94 to the D-mark at one point. In the absence of a clear explanation, the pressure persisted.

It forced short-term interbank rates up from around 13 per cent to 25 per cent at one point and, in March, intervention to support the currency cost the Bank of Portugal about 10 per cent of its non-gold foreign exchange reserves.

However, the important question surrounding the affair may be whether the minister was, indeed, trying to interfere with central bank policy and, if he was, to what extent was he damaging the Bank of Portugal's reputation as an independent institution?

Ashley Ashwood

The Bank of Portugal

How to do business in Portugal. Without all the business of getting there.

Since Portugal became a member of the European Community, it seems the whole world wants to do business there.

Are we seriously suggesting that you hesitate? Not really.

But we do suggest that you drop in to your local branch of Banco Espírito Santo before you dash off to the airport.

In the comfort of your own country, we can advise on the best way to invest in ours.

We can explain local procedures and suggest local contacts. We can clarify regulations and help cut red tape. We can assist with feasibility studies and forward planning.

Once everything is in place, we can then provide all the commercial and investment banking services you'll need.

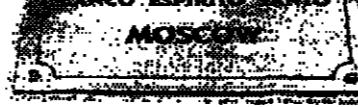

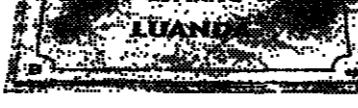

From arranging foreign exchange and letters of credit to stock brokerage, venture capital, leasing and factoring.

In short, when you talk to Banco Espírito Santo outside Portugal, you gain access to Banco Espírito Santo's unrivalled network of branches, services and contacts inside Portugal. (Not to mention the experience and resources of the whole Espírito Santo Group, in Portugal and elsewhere.)

All of which means that, when you do get there, you can start doing business.

Without all the usual business.

BANCO ESPÍRITO SANTO

Member of SEFA.

The bank's credibility is central to the growth of Portugal's financial markets and its banking industry. The prospect of it becoming fully autonomous under the monetary union rules of the European Community holds out a vitally important promise of monetary stability for tiny Portugal.

The present government has already overseen an important transfer of autonomy to the Bank of Portugal. It is no longer obliged to finance the government (by underwriting treasury bills) and, says Mr Miguel Beleza, the governor, while it could if it was thought appropriate, "we have not thought it appropriate for the last two years".

For the moment, though, exchange rate and interest

The prospect of the bank becoming fully autonomous holds out the promise of monetary stability

rate policy are made in conjunction with the government, meaning, probably, that the finance ministry has the final say.

But, assuming the EC's efforts to forge a monetary union remain on track, the Bank of Portugal will become its own master, fully autonomous, before the end of the decade. It will (so the theory goes, at least) control monetary policy and remain the main regulator of the country's financial system.

This may have been where the finance minister stepped in. He says he was not trying to force the bank to cut official interest rates but to get it to persuade commercial banks to narrow the vast gap between their prime lending rates and the high rates that small businesses have to pay for loans.

"The Bank of Portugal could do more to explain how the economy works in a time of change," he says. "It is part of forming a consensus."

The minister sees this political role for the central bank as an extension of four key structural measures taken by the government in the last few years to drag the country's financial system into the late 20th century:

■ The end of the bank's obligation to finance the government.

■ The start, last December, of full convertibility of the escudo.

■ The decision to enter the exchange rate mechanism of the EMS last year.

■ New banking laws which open the sector to full competition.

By explaining "how the economy works", Mr Braga de Macedo means that the bank should become involved in debates on how the banking system should respond to the crisis sweeping small and medium-sized businesses as the country teeters on the verge of recession. "Consensus is important," he says. "If we are incapable of responding rapidly to the crisis we will find ourselves still at the bottom while others are recovering. There is a great deal of work for everyone to do."

Is this interference? On balance, it probably is. The question is whether it interferes in the bank's monetary policy role, or in its other task as a regulator. More likely, it is the latter. Even after full autonomy is granted to the central bank, it is unlikely to include banking regulation, where the government will still have the power to make banking law.

The issue has implications for the approaching independence of central banks in Spain, France and elsewhere in the EC. If a central bank cannot be told how to behave as a guardian of monetary policy once full autonomy is achieved, will governments then try to follow Mr Braga de Macedo's lead and implicate their central banks, through their continued exposure to government as banking regulators, in the implementation of policy?

THE ECONOMY

Target is to exceed EC growth

THE PORTUGUESE government may be perfecting a cure for a malady that makes life miserable for finance ministers - the need to set macroeconomic targets and the almost inevitable need to explain why they have not been met.

So it is with convergence - the effort being made by member states of the European Community to raise the performance of their economies in order to be able to form a monetary union by the end of the decade. Portugal, like its neighbour, Spain, and a number of other EC members, has previously published a series of inflation, growth and debt targets to guide policy-making as monetary union approaches.

Unfortunately, not many of these targets are being met as Europe falls into economic recession. In Lisbon, though, Mr Jorge Braga de Macedo, the finance minister, deals neatly with the problem. It does not matter, he argues, that official forecasts of the country's economic growth this year have fallen from, first, 3 to 2 per cent and, finally, to 1.75 per cent.

In fact, the minister does not even blanch at suggestions that Portugal's GDP could grow at less than 0.5 per cent this year. What matters is that it grows faster than the EC average. That way, even zero growth would imply continued convergence if the rest of the Community were in recession.

"I don't want to harp on numbers," he says. "We believe we will continue to grow by more than the rest of the Community."

That confidence is crucial now. Portugal is being buffeted by some strong winds. Critically for an export-led economy, its two biggest trading partners, Germany and Spain, are either close to recession or in it.

And while inflation is falling - it currently hovers at between 7 and 8 per cent - the government is committed to a stable exchange rate policy which forces it to keep interest rates frustratingly high.

Economic growth may above

Miguel Beleza: defending the escudo's parity

Ashley Ashwood

GDP growth

Mr Rui Martins Dos Santos, chief economist with Banco Português de Investimento, says the government's convergence programme commits it to meeting only EC averages and not the strict monetary union targets established in the Maastricht treaty.

Economists like Mr Dos Santos like what they see. "Policy is becoming more flexible," he says. "The government needs to pay much more attention to the economy and forget a little about nominal convergence."

How quickly these programmes put money into the pockets of construction companies, farmers and exporters remains to be seen but both the finance minister and independent analysts believe the current slump is different and that Portugal is poised to make an important break with its economic past.

Mr Dos Santos argues that even if Portugal does slip into recession, it will be this year and it will be short and shallow. Typically, Portugal would go into recession much later than its main trading partners but the hope in Lisbon is that, this time, it will recover along with the rest. But the speed with which recession has overtaken Spain has clearly alarmed the Portuguese and it may be that the "last in, first out" conjecture is just wishful thinking.

"Our great concern is to avoid the impression that there is nothing we can do in the crisis," says the finance minister. "This time we have a medium-term strategy in place and the economy continues to show a resilience which the government hopes will enable it to pick up with the rest of Europe. Our cycle is always late and we need to hold on until recovery occurs."

The machine that moulds the sole to the upper part of the shoe at the Ecco/et factory near Oporto

PORTUGAL is enjoying an unprecedented era of infrastructure development. A new 11km, Es121bn (Es30m) bridge is to span the Tagus estuary at Lisbon. A railway crossing will be added below the existing bridge - all in time for 1998, the year when Lisbon hosts the international exhibition Expo 98 that will lead to a major face-lift for the eastern side of the city.

In the power sector, a consortium led by the UK's National Power is paying Electricidade de Portugal, the state-owned power company, Es183bn to take over the construction of two 300MW coal-fired power plants at Pego in central Portugal. The deal could eventually extend to four units. Natural gas is to be introduced into the country and one, probably two, gas-fired power plants will be built downstream.

The total cost of European Community and government infrastructure development between 1989 and 1993 is estimated at Es15,500bn and a similar sum is expected to be spent to the end of the century.

What distinguishes the above projects from the billions being spent on new motorways, bridges, railway improvements and telecommunications is that all are being financed by phenomena new to Portugal - project finance, in the strict sense of private sector enterprise in which the cash flow of the project is enough to pay back all the loans raised without recourse to shareholders.

Previously, major infrastructure projects in Portugal were carried out by giant state-owned enterprises and financed by loans to enterprises that had the state guarantee of Portugal Inc. Government officials do not deny that

PROJECT FINANCE

Stumbling blocks still need to be overcome

ment called off two years of talks in March between an international consortium led by Gaz de France (GDF) and EDP after the two failed to agree on prices and risk-sharing.

"We would rather have no deal than a bad deal," Mr Luis Pereira, Portugal's energy secretary, said. He blamed GDF, saying it had expected EDP to take on exaggerated risks. It had insisted on fixed costs that were too high and had undermined the talks by reviving already agreed questions close to negotiations.

GDF said it remained determined to bring off the project if only the points in dispute could be overcome. The Portuguese government has set a deadline of mid-May to decide on what route it will take to bring natural gas into the country.

The difficulties leave a question mark over the competition status of EDP signing a 28-year exclusive deal to purchase power from the plant and difficulties over both the contract for coal to be unloaded and over the contract for rail delivery of the coal.

The finance package in place behind the Pego deal is as complex as any international agreement. It involves the issuing of ordinary shares in Lisbon, shareholder loans, and two Deutsche Mark non-redeemable loans to be provided by

two syndicates of banks. One is an "offshore facility", the other a "domestic facility" provided by Portuguese banks.

Analysts predict financing of the new bridge project will be even more complex than the Pego plan. The main guarantee for Pego is the power purchase agreement to be signed by EDP. In the case of the new bridge, which also brings with it the concession for the existing toll bridge, many complex factors have to be examined.

A list of eight international consortia for the bridge project has been cut down to five and should be reduced to two before the end of the year.

Their proposals for the build, operate and transfer deal will have to take into account how many cars will cross the bridge, what toll should be charged, how soon can the consortium hand back the bridge to the state, what will be the impact of the new rail crossing over the existing bridge and other, difficult to assess questions.

"Portugal is learning from its mistakes," believes Mr Crisostomo Silva. "I think you will now see the government waiting longer to choose the preferred bidder and guaranteeing first that it actually has the banks and the money behind it before going into detailed negotiations."

Peter Wise

The challenge of freedom

BANK lending rates for mortgages in Portugal have fallen from 24 per cent 18 months ago to as little as 14 per cent today.

This boost for home-buyers is just one signal of the new spirit of competition that has taken hold among commercial banks, and of the significant improvement in underlying fundamentals such as inflation that has occurred over the past two years.

Released from the strait-jacket of government-imposed credit limits and with the process of privatisation in the sector close to completion, banks are operating in a new atmosphere of freedom that is both an opportunity for growth and a challenge to their creativity.

Despite the increase in competition and the squeezed margins that result, banks, globally speaking, have fared well in this new environment that brings them closer to the operating conditions of their European counterparts. With a few exceptions, net assets and net profits grew solidly in 1991 and 1992.

But 1993 will be a year of bigger challenges. "This year will be relatively difficult for the banking sector," says a Portuguese banker. "First, heavy capital investments were made over the past two years to defend and expand market shares when the sector was fully liberalised in 1993. These investments will have to be amortised."

Secondly, the banking sector will inevitably reflect the marked deceleration of the economy as a whole.

After two years of strong expansion and diversification of their credit portfolios following the abolition of government credit restrictions, banks will now be challenged to exercise constraint and be far more rigorous in their risk assessment.

Credit problems are already growing at a slightly faster rate than credit overall. But banks are not too concerned.

One of the advantages of the previous credit ceiling system is that the majority of Portuguese banks are well capitalised. The two or three exceptions are all public with the guarantee of the state behind them and are eventually likely to be financially restructured.

A key area of attack for Portuguese banks in the less auspicious climate of 1993 will be costs. Higher financial margins in Portugal compared to the rest of Europe tend to allow a higher ratio of costs, enabling banks to accommodate inefficiencies that would otherwise not be tolerated.

With few exceptions, Portuguese banks are much more labour-intensive than their European counterparts and investments in information technology are more recent and often far from complete. Routine operations in a great number of banks are still carried out by hand.

"In an environment of falling margins, the crucial objective is cost control," says Mr Joaquim Gomes, an analyst with Lisbon-based independent stockbrokers Midas Investimento. "Only by reducing the number of employees per

Clouds over the government's future privatisation programme

State asset sales face snags

Banco Nacional Ultramarino's building, designed by Tomas Taveira, in Avenida 5 de Outubro, Lisbon

IF EVENTS go according to plan, the weight of state-owned companies in the Portuguese economy will cut by half during the current term of Mr António Cavaco Silva, the prime minister.

According to the 1993 budget, their contribution towards gross domestic product should be no higher than 8.5 per cent by the time the general election is due in 1995, compared to 16.2 per cent this year.

Other declared aims of the government's privatisation programme are to boost capital markets and to strengthen domestic entrepreneurial groups, preparing them for the impact of the single market.

Although the privatisation programme has been a success so far - at least in financial terms - analysts warn that the future could be less rosy.

From spring 1989, when it began, to the end of last year, the total or partial sale of 25 companies yielded £367.6m (£2.96bn). In 1993, the finance ministry expects privatisation revenue of £225m, 20 per cent of which will be channelled back into remaining state-owned companies.

Investors are critical that little else is known about the government's privatisation plans. There is no official timetable, which the government says depends on the state of the markets, and finance ministry officials are customarily tight-lipped about future privatisation plans in general.

In 1992, the government concluded the reprivatisation of the insurance sector. This year, it is expected to sell its remaining assets in banks, with the exception of the large Caixa Geral de Depósitos and Banco Fomento de Exterior groups, which will remain under state control.

Portugal's private financial groups are

still busy establishing themselves and one of their main objectives is to increase in size. This has ensured that most privatisations in the financial sector have been a success. With the possible exception of Banco Pinto e Sotto Mayor, which faces grave financial problems, forthcoming sales in this sector should go smoothly.

The same cannot be said of the state-owned industrial sector where many companies are seriously ailing. This has been seen in unprecedented difficulties in selling off cement, steel and petrochemical companies.

This year's programme started on the wrong foot when the government failed to find a buyer for the cement companies Secil and Cimentos de Maceira and Pataias. It set a minimum price of £60m for its 80 per cent share in the two companies. Only Portuguese-controlled groups were allowed to participate. But the two domestic groups originally interested in the deal backed out, complaining that the price was too high. The government is now expected to open up the process to foreign groups in a second attempt.

After apparently missing the right time to sell the Siderurgia Nacional steelworks, the government now faces the unpleasant prospect of having to pay to sell this loss-making giant. Analysts said it was clear from the start that SN could survive only as part of an international group.

However, the one group that has come up with an offer, the French-Spanish

Usinor-Sacilor joint venture, is reported to be interested only if the government takes over SN's liabilities, estimated at £60m.

Portugal's largest enterprise, the oil company Petrogal, is proving to be another complex and arduous case. The Portuguese media has suggested that the government is considering declaring the sale of the first 25 per cent of the company null and void because of a dispute with the purchasers, the consortium Petrocontrol.

Petrocontrol - a group comprising domestic investors and Total of France -

is refusing to share the costs of a badly-needed £40m capital increase, arguing that when it bought the 25 per cent share last year it had no way of foreseeing the extent of losses Petrogal would make in 1992.

One need not envy Mr José Manuel Elias da Costa, secretary of state for finance, who is responsible for the privatisation programme, his task. In addition to the international recession, which has reduced the value of companies, he has to contend with a constantly depressed domestic

capital market and with the increasing apathy of investors aware that the best companies have already been sold. In addition, margins between fixed minimum share prices and the highest bids have been practically non-existent.

In several cases the government has been accused of presenting the companies it is putting up for sale in too favourable a light. Share prices have often fallen following privatisation, making small investors wary.

Domestic business groups complain of a lack of consideration for their restricted financial potential compared to the power of foreign investors. They claim that if the government were really interested in creating strong domestic groups, it would not make raising as much capital as possible from privatisations its first priority.

It has been suggested that one way of achieving this would be to privandise more companies through direct negotiations or tenders instead of stock exchange auctions, the method used in most privatisations to date.

The government has indicated there will be fewer auctions in future, particularly in the industrial sector. However, officials are caught in a double bind as they have been criticised just as strongly for imposing tight restrictions on foreign participation as a means of protecting domestic interests. The arguments here are that there is simply not enough money in Portugal to guarantee the successful

sale of all public companies and that the government is distorting the market by imposing such limits.

These restrictions and the practice of revitalising state-owned companies with public money prior to their sale have also provoked a complaint from the European Commission.

Mr Elias da Costa sought to justify the limits on foreign participation in talks with Commission officials in Brussels earlier this month. He argued that only Portuguese assets were nationalised after the fall of the Portuguese dictatorship in 1974 and that the decision to give priority to domestic capital was a way of compensating for this "injustice".

While the Commission apparently remains sceptical, Mr Elias da Costa is confident that the matter can be resolved without a lawsuit against Portugal in the European Court of Justice. He says the Commission's reservations will not interrupt or slow down Portugal's process of privatisation.

Companies that may be privatised at least partially this year include:

- Banco Totta e Acores, remaining 14.5 per cent;
- Banco Pinto e Sotto Mayor;
- Petrogal, second phase;
- Secil and Cimentos de Maceira e Pataias;
- Siderurgia Nacional;
- Gas de Portugal;
- Estaleiros Navais de Viana do Castelo, shipyard;
- Portucel, paper, pulp;
- Four bus companies belonging to Rodoviaria Nacional;
- Part of the water distribution network.

Peter Wise looks at the progress of investment from overseas

AutoEuropa proves a magnet

Another major investment in Portugal has recently been made by Pepsico Foods International, which is to invest £13bn (£90m) in setting up a snack-food factory and an Iberian distribution network centred at Carregado, some 50km north of Lisbon.

The project should be fully operational by 2002 and the first stage of production will start shortly. Turnover, when cruising speed is reached in 1996, is expected to total some £21bn, approximately 70 per cent of which will be from the export market.

The construction of the new factory will lead to the creation of over 1,000 jobs directly as well as a further 600 indirectly. Pepsico officials

say that aim of the project is to integrate its operations in the Iberian peninsula and that the site in Carregado offers several advantages over other

1992	4.375

possible choices in both France and Spain.

The potential of the Portuguese market, where about 30

per cent of total output will be sold, weighed heavily in Pepsico's decision as did the development of transport networks and economic arguments that outweighed Portugal's disadvantages of being further away from the principal demand centres and the fact that the country has a less developed agricultural sector and less up-to-date distribution

age requirements. "At the outset we considered the possibilities of France, Spain and Portugal. The reason we decided on Portugal, in the end, was market conditions: it's a market that's growing considerably and has great potential.

"Also, we knew that the local authorities were greatly interested in the investment and were prepared to grant assistance," he says. "One of the factors that exerted the greatest influence on the Portuguese government was the fact that the project provided a high level of employment and that it was an integrated agro-industrial concern."

The interest of the Portuguese government translated

into sizeable EC-funded investment grants that for contractual projects like the Pepsico enterprise can reach 50 per cent or more of the total investment.

In a recent move to make contractual investment projects more accessible, the government has halved the minimum qualifying investment for the contractual regime from £10m to £5m. It is hoped that this will also enable some larger domestic companies to qualify.

Neste, the Finnish group, also recently reached agreement with the Portuguese government on a £17m project to make full use of the comparative advantages of the Sines Petrochemical complex, less than 100km south of Lisbon, where Neste already runs a petrochemical plant.

The contract envisages setting up a Methyl Ter Butyl Ether plant with a production capacity of 45,000 tons a year. MTBE is a compound that replaces lead in petrol, reducing pollution.

The project also includes increasing the production capacity of Neste's high-density polyethylene plant from 80,000 to 120,000 tons a year and enlarging and developing its polypropylene plant from 70,000 to 80,000 tons a year.

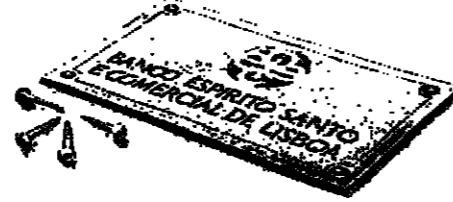

The highly capital-intensive project will create only about 40 jobs.

These major contractual investments get into the headlines. But it is small and medium-sized investments and joint ventures that make up the bulk of foreign investment in Portugal.

Even though both the Ford-Volkswagen project and the Pepsico investment were authorised in 1991 - Neste was the only contractual investment made in 1992 - and despite the international recession, direct foreign investment in Portugal last fell only to \$4.8m from \$5.5m the previous year.

We built our international network over seventeen years.

Then created Portugal's leading financial group overnight.

When all the Portuguese banks were nationalised in 1975, our response was to bank elsewhere. First in Luxembourg. Then in Brazil. Followed by Switzerland, France and the United States.

Throughout the international expansion of the Espírito Santo Group however, we harboured an ambition: to return to Portugal and re-establish the Espírito Santo banking name where it all began in 1884.

We finally achieved this ambition in February 1992, with the reacquisition of Banco Espírito Santo. To our existing presence in private, corporate and investment banking, this acquisition added, overnight, real strength in retail and commercial banking.

In finalising the deal, we completed our range of financial services in Portugal; and complemented our services in the United Kingdom, Spain, Italy, Germany and the USA.

Which puts the Espírito Santo Group in an even stronger position all round.

Both for Portuguese clients who want to expand abroad. And for international clients who want to take advantage of the fastest growing economy in Europe.

CURRENCIES, MONEY AND CAPITAL MARKETS

FOREIGN EXCHANGE AND MONEY MARKETS
Awaiting US GDP

ALTHOUGH most of the price action in foreign exchange markets was in the peseta crosses last week, the main focus for dealers may now move back to the dollar, writes *James Blitz*.

At the start of the year, the markets were bullish for the US currency in the first half of 1993. That optimism has now all but withered away, with the dollar failing to break through the DM1.67 level against the D-Mark.

On Friday, the US currency fell to DM1.5770, a new low in the current cycle - and some analysts believe it is going lower still. Economic indicators in the next few days will decide the dollar's near-term fate.

UK clearing bank base lending rate 6 per cent January 26, 1993

The most important indicator is the first quarter GDP figure, due out on Thursday. There is little doubt that the economic upswing in the US in the first three months of this year was

more shallow than the one which took place in the last quarter of 1992.

But Mr Gerard Lyons of DKB International in London is more pessimistic than the figure than other economists: he thinks it will be around 2 per cent against market estimates of 2.6 per cent.

The Conference Board's consumer confidence figures, due tomorrow, will also be keenly watched.

The market expects only a slight rise in confidence, of around 6.4 per cent compared to last month's Conference Board figure of 6.2 per cent.

In Europe, there will be a strong focus on the peseta, although economists believe this is unlikely to have an effect on the structure of the ERM.

One factor which may help the peseta would be another cut in the Bundesbank's repo rate on Wednesday. The sharp decline in German call money in recent days, down to 7.82 per cent on Friday night, has made a repo rate fall inevitable.

NEW YORK STOCK EXCHANGE COMPOSITE PRICES

MONDAY INTERVIEW

A star of the small screen

Howard Stringer, president of CBS Broadcast Group, talks to Raymond Snoddy

Howard Stringer's office in Black Rock, the New York headquarters of CBS, has no shortage of the memorabilia you might expect to find surrounding the president of a US television network. There is a display of Emmy awards and a weighty bronze statue of a bronco rider, a gift from Burt Reynolds, star of the successful CBS sitcom *Evening Shade*.

But, as the Coronation mugs and Welsh national flag on his desk suggest, Stringer hardly fits the stereotype of a top American media executive. Born in Cardiff and educated at Oxford, he served with the US army in Vietnam before rising through the ranks of CBS.

More recently, the Welshman has proved himself American television's most astute arbiter of taste, taking CBS's audience ratings from third to first place in the 1981-82 season - the first time any network has made such a jump in a single year. Its ratings supremacy was confirmed last week, with CBS completing the 1992-93 prime-time season with the highest overall ratings, while increasing its number of nights with top ratings from two to four.

"Two years ago NBC said that in two years there would be only two networks and that CBS would be the one that would go away," says Stringer with an understandable sense of satisfaction. It is now NBC that is mired in third place.

As president of the CBS Broadcast Group, Stringer is in charge of all the company's broadcasting operations, a \$3.5bn-a-year business which includes the CBS network as well as wholly owned television and radio stations.

But although he is the boss of a leading US corporation, Stringer is just as likely to be wooing the stars of rival networks as he is to be studying balance sheets. In January, after a long courtship, the CBS president lured away NBC's David Letterman, the popular late-night chat show host, in a deal believed to be worth more than \$40m.

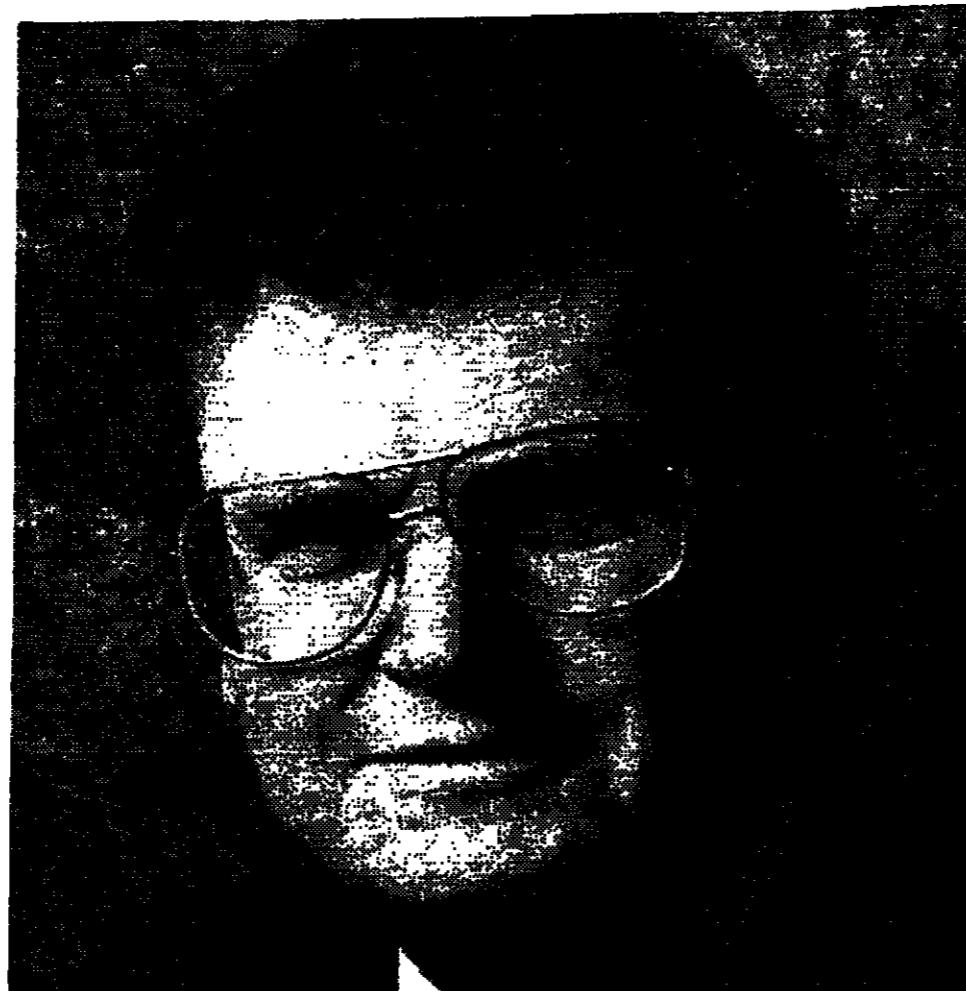

Programming victories such as this are starting to translate into profits. Last year CBS had pre-tax profits of \$227m with only \$14m coming from the network, \$170m from CBS television stations and \$21m from radio. This year Ms Jessica Reif, media analyst at Oppenheim, the stockbrokers, is forecasting group pre-tax profits of

\$388.7m of which \$170m will come from the network. This is despite the disappointing ratings for the network's sports programming - an area in which CBS has been criticised for overspending.

The genial Stringer, 51, has risen to the top at a sedate pace. At 30, when he was a CBS television researcher, he was given the opportunity to produce programmes, and the result was four prize-winning news documentaries.

His next big challenge was in 1981 when he was became producer of the CBS Evening News, the network's main evening news programme, which had slipped into third place, behind NBC and ABC.

Within two years he had taken

There is no place for autocrats in the 1990s'

tre of a bitter attack on network executives. The affiliates were in open rebellion over CBS's dismal ratings.

"For some reason I was the only one who decided to speak. I took on everything and everyone," recalls Stringer. Two months later he was head of all of CBS with a brief to take the network out of bottom position. The challenge was not only to increase ratings but to do it while cutting costs.

Stringer rose through the CBS ranks during the 1980s, changing jobs every two years as those above him - many brought in from outside the organisation - were fired.

"I had relationships and a sense of loyalty to the organisation that kept me from being fired," he says, although he concedes he came close to being sacked when CBS was acquired by Mr Larry Tisch's Loews Corporation in 1986.

It was a time of rapid change and Stringer was not only one of the old guard but an executive vice-president of CBS News he was in charge of one of the big spending departments. When he accompanied Tisch on a train journey from New York to Washington he saw it as a make-or-break occasion.

Tisch promptly fell asleep, which could have cost Stringer his one chance to get to know the new CBS owner.

On Tuesday nights he began showing popular films aimed at a younger audience.

"It's really a question of consistently slamming home building blocks over four years and when something doesn't work ditching it fast," he explains.

In a more stable atmosphere he set about rebuilding his network's performance by concentrating on winning individual programme slots one at a time.

On Monday nights, he brought in a hit programme called *Murphy Brown*, a sharp-edged comedy starring Candice Bergen, and used it as a lead-in to promote the rest of the schedule.

On Tuesday nights he began showing popular films aimed at a younger audience.

"It's really a question of consistently slamming home building blocks over four years and when something doesn't work ditching it fast," he explains.

Stringer came to the CBS network in the first place as is remarkable as he came to it run it. Born in Cardiff, he won an assisted place at Oundle, the English public school, and went on to Merton College, Oxford.

Stringer has signed up for another four years at CBS at more than \$1m a year, but after that he may return to the UK. Last year he was sounded out for the chief executive's job at ITV but he was not interested. If he was offered the director-general's job at the BBC, it might be a different matter. "I wouldn't rule it out. But by then I'll be too old and probably seen as too American," he says.

"I wouldn't rule it out. But by then I'll be too old and probably seen as too American," he says.

Stringer has signed up for another four years at CBS at more than \$1m a year, but after that he may return to the UK. Last year he was sounded out for the chief executive's job at ITV but he was not interested. If he was offered the director-general's job at the BBC, it might be a different matter. "I wouldn't rule it out. But by then I'll be too old and probably seen as too American," he says.
